HubCRM Workspace Guide

HubCRM is the sales workspace where your team captures leads, follows them up, calls and messages them, and turns them into customers. This guide walks through every screen of the workspace (the **tenant panel**, opened at `/admin` on your HubCRM address).

How the workspace is laid out

The left sidebar groups everything by job. Some items only show if your role allows them.

Sidebar group	What is inside	Guide page
Leads	All Leads, Follow-ups, Task Calendar, Conversations, Call History, Companies, Pipelines, Automations, Email Templates, Email Sequences, AI SDR Agents, Forms, Imports	Leads, Follow-ups, Calls & messages, Automations, Email
Pipeline	Kanban Board	Pipelines & Kanban
Sales	Quotes, Invoices, Recurring Invoices	Quotes & invoices
Tools	Landing Pages, Lead Widgets, Web Tracking, AI Chatbot, Meeting Types, Bookings, Products, Feature Requests	Lead capture, Meetings
Integrations	Lead Sources, Source Health, Webhook Logs, AI Settings	Integrations & API
Reports	All reports, Scheduled Reports, Audit Log	Reports
Settings / Team & Access / Brand & Domain / Communications / Advanced	Custom fields, scoring, tags, team, roles, security, branding, domain, email, messaging, storage and more	Settings, Team & security
Account	Billing, Two-Factor Auth, Privacy & Data, Help Center	Account & billing

Find anything fast

Press **Ctrl + K** (or **Cmd + K** on Mac) anywhere in the workspace to open the command palette. Type a lead name, email or page name and jump straight to it.

Roles in one minute

Role	Typical access
Admin (workspace owner)	Everything, including billing, team, roles, security and every custom field
Manager	Team leads, reports, automations, assignment
Agent	Own leads (or all leads, depending on **Lead visibility** in Team & Seats), follow-ups, calls

The exact permissions are editable per role in **Roles & Permissions** - see Team & security.

Suggested reading order

1. Getting started - sign-in, first-run checklist, dashboard.
2. Leads and Follow-ups - the daily core.
3. Pipelines & Kanban, then Automations.
4. Everything else as you need it.

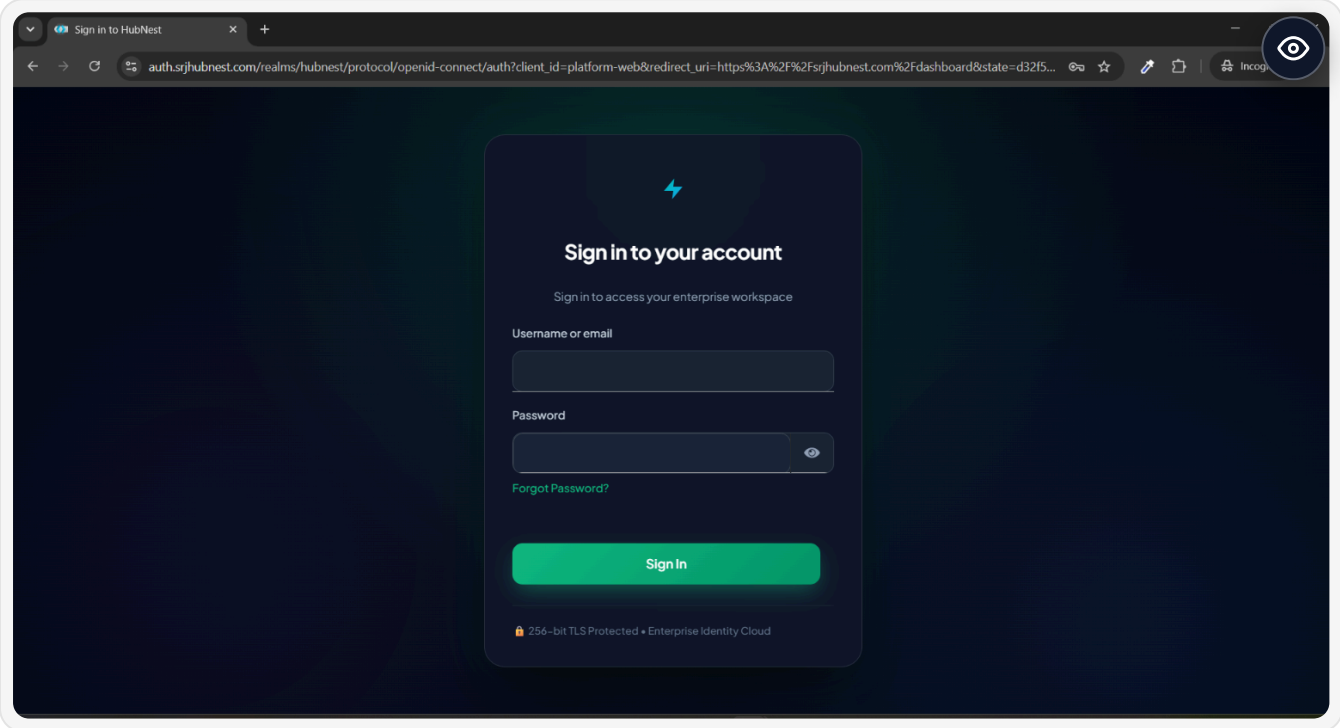

Need a screenshot list or want to contribute images? See the screenshot checklist.

Getting Started

1. Sign in

HubCRM opens through your HubNest account.

1. Go to your HubNest dashboard and open **HubCRM** (or open your HubCRM address directly and choose **Sign in with HubNest**).
2. Sign in with your HubNest email and password. If your workspace uses a custom domain or white-label login, you will see your own logo on this screen.
3. You land on the **Dashboard**.

> **Note**
>
> Team members are added from **Settings** → **Team & Seats**. They receive an invitation and sign in the same way. See Team & security.

2. The first-run wizard

The first time a workspace admin signs in, the **Onboarding Wizard** asks for the basics (company details, pipeline, how you will get leads). You can **Skip** it and finish later from the checklist.

What the wizard asks

The wizard runs as a short series of full-screen steps, with a progress bar at the top and **Back / Next** buttons:

1. **Company details** - your business name, industry and team size.
2. **Your first pipeline** - pick a ready-made set of stages (e.g. *New* → *Qualified* → *Proposal* → *Won*) or start blank.
3. **How you get leads** - tick the sources you use (website form, WhatsApp, ads, referrals...) so HubCRM can suggest the right setup.
4. **Invite your team** (optional) - add teammates by email; you can always do this later from Team & Seats.

Skip in the top-right corner closes the wizard at any point - nothing already saved is lost, and the rest shows up in the **Getting started** checklist below.

3. "Your first moves" checklist

The dashboard shows a **Getting started** card with the first steps (add a lead, set up a pipeline, connect a lead source and so on). Each item ticks off by itself when you do it.

What the checklist looks like

A card on the dashboard titled **Getting started** (or **Your first :total moves**) lists each step as a row with a circle on the left: empty for not done, a green check once completed. Typical rows are *Add your first lead*, *Create a pipeline*, *Connect a lead source*, *Invite a teammate* and *Make your first call*. Clicking a row takes you straight to that screen. The card shrinks to a small progress bar once every step is checked, and you can dismiss it from its ×.

4. The dashboard

The dashboard gives a live view of the pipeline.

Widget	What it shows
Lead stats	New leads, total leads, conversions for the selected period
Leads over time	Daily lead volume
Leads by source	Which channels bring the most leads
Lead status	Share of New / Contacted / Qualified / Converted / Lost
Pipeline distribution	How many leads sit in each stage
Revenue forecast	Expected revenue from open deals weighted by stage
Live lead feed	New leads appearing in real time

Reading the dashboard

The widgets sit in a grid below the top stat cards. **Leads over time** is a line chart with days along the bottom and lead count up the side. **Leads by source** and **Lead status** are donut charts with a coloured legend (hover a slice for the exact count). **Pipeline distribution** is a horizontal bar per stage. **Revenue forecast** is a single large currency figure with a small trend arrow. **Live lead feed** is a scrolling list of the newest leads with their name, source and a timestamp like "2 minutes ago", updating on its own without a page refresh.

Customise your dashboard

Open **Customize Dashboard** (button on the dashboard) to choose which widgets you see and their order. The choice is personal - it does not change anyone else's dashboard.

The customise screen

A panel slides in listing every available widget with a toggle switch next to each - on to show it, off to hide it. Visible widgets also show a drag handle (⋮⋮) on the left so you can reorder them by dragging up or down; the dashboard behind updates live as you drag. **Save** applies the layout and closes the panel; **Reset to default** restores the original set and order.

5. Your profile and notifications

- **Settings** → **My Profile**: name, photo, phone, language, **your calling phone number** (used by click-to-call) and meeting link.
- **Settings** → **Notifications**: choose which alerts reach you by email, browser push or in-app.

My Profile screen

A form with your photo (click it to upload a new one) at the top, then fields for **Name, Email** (read-only, changed from Security), **Phone** - this is the number HubCall rings first for click-to-call, **Language** and your personal **Meeting link**. A **Save changes** button sits at the bottom; a green toast confirms the save.

Notification preferences screen

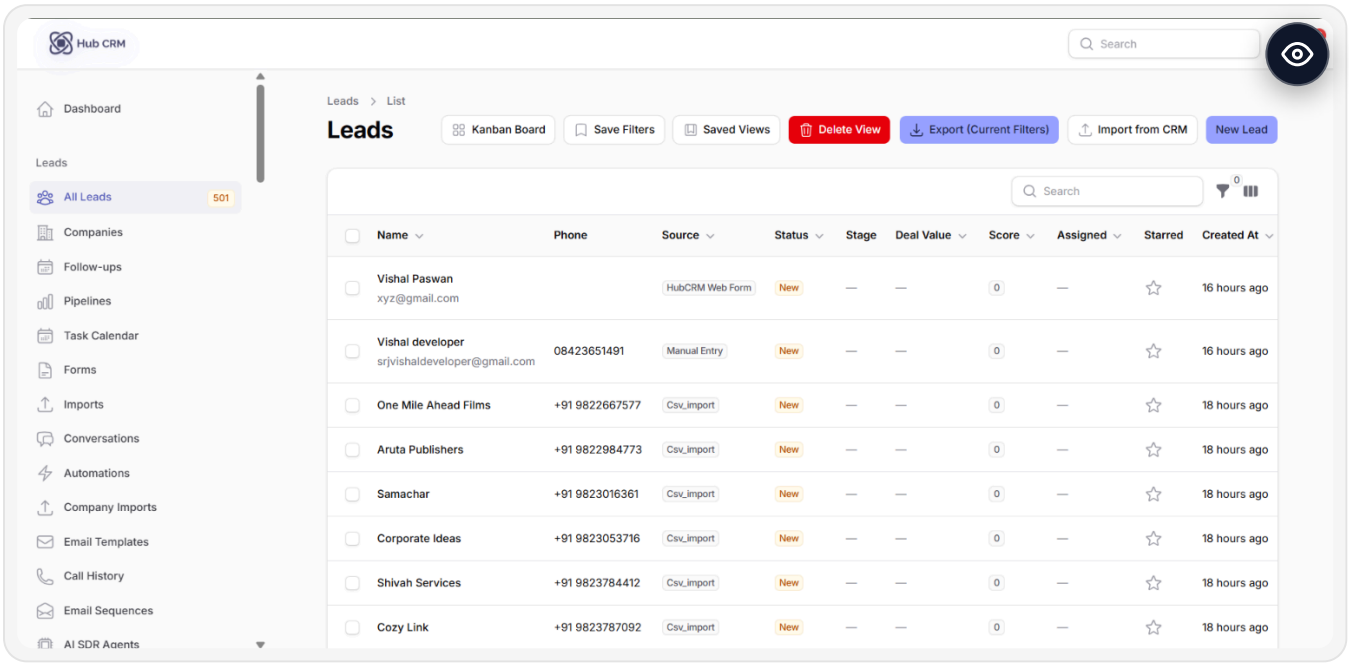

A table with one row per event (*New lead assigned, Follow-up due, Follow-up overdue, Mentioned in a note, Automation failed...*) and three checkbox columns: **Email, Push, In-app**. Tick or untick any combination per event, then **Save**. A "Send a test notification" link at the top lets you confirm delivery.

6. Help inside the app

Account → **Help Center** has short articles for each feature. Use **Feature Requests** (Tools) to suggest ideas and upvote other people's requests.

Leads

Leads → All Leads is the heart of HubCRM. Every enquiry, contact or prospect is a lead.

The leads list

Each row shows the columns your admin enabled (name, email, phone, company, source, status, assigned agent, score, tags, expected close, **Waiting On**, created date and any custom fields you may see). Use the **column picker** to show or hide columns and drag to reorder.

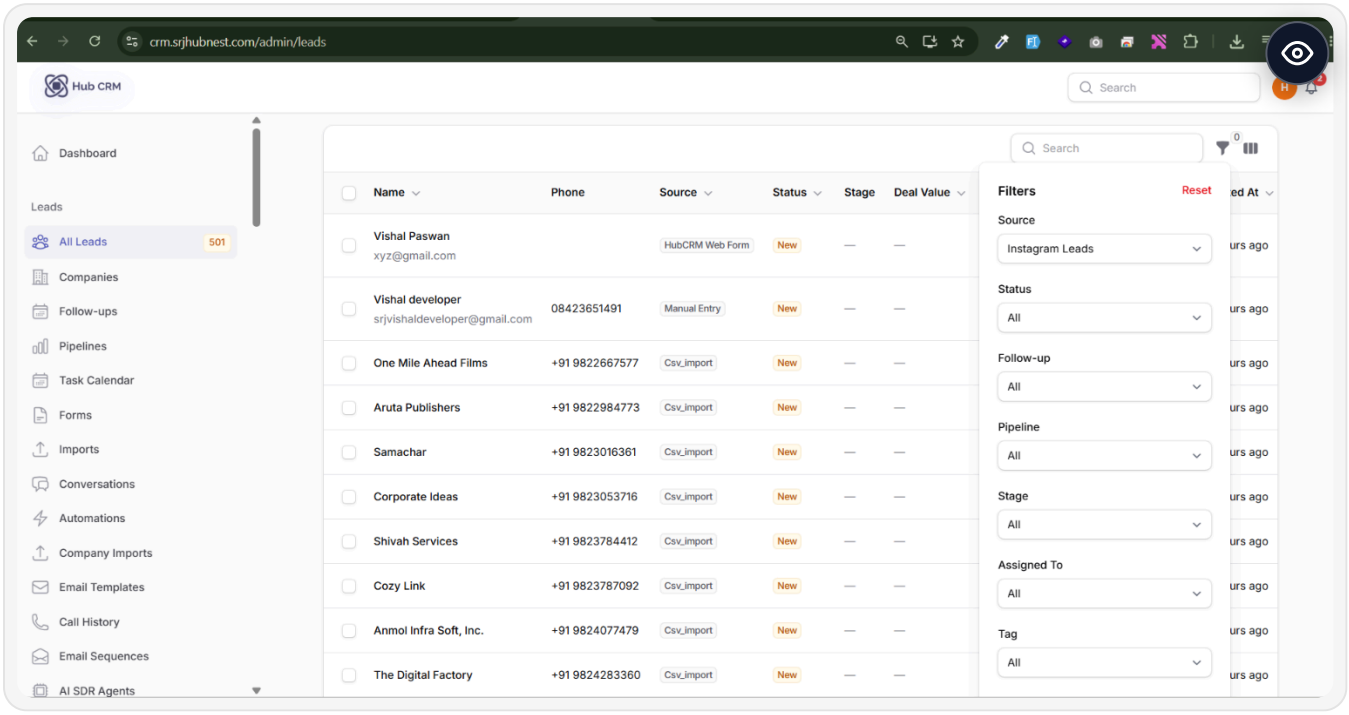

Control	What it does
Search	Searches name, email, phone, company and custom fields marked *Searchable*
Star	Click the star to pin a lead you are watching; filter on **Starred only**
Saved views	Save the current filters (and optionally the column layout and sort) as a named view; pick it again any time
Dup	Flags a possible duplicate - use **Duplicates only** to review them

Filters

Open the filter panel to narrow the list:

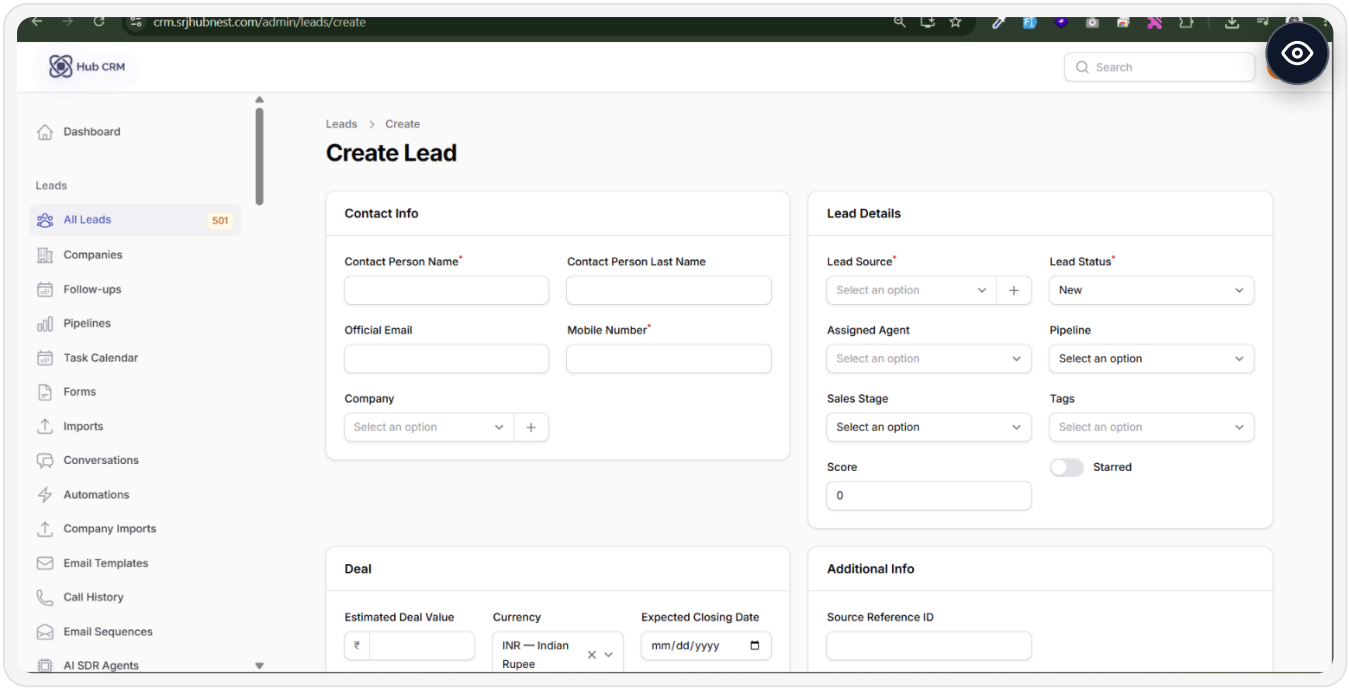

- **Source**, **Status**, **Tag**, **Assigned To**

- **Follow-up**: Overdue, Due today, Due tomorrow, Due in the next 7 days, No follow-up scheduled
- **Waiting on**: *Us (they replied)*, *Them (we reached out)*, *New (no contact)*
- **Created from / until**, **Min score**, **Min / Max deal value**
- Custom fields marked *Show in filters*

Add a lead

1. Click **New Lead**.
2. Fill in **First name, Last name, Email, Phone, Company**.
3. Choose **Source** (use *Custom source name* for things like Walk-in or Exhibition), **Status**, **Pipeline** and **Stage**.
4. Optionally set **Assigned To**, **Deal Value**, **Currency**, **Expected Close Date** and **Notes**.
5. Fill any **custom fields** your admin added.
6. Click **Create**.

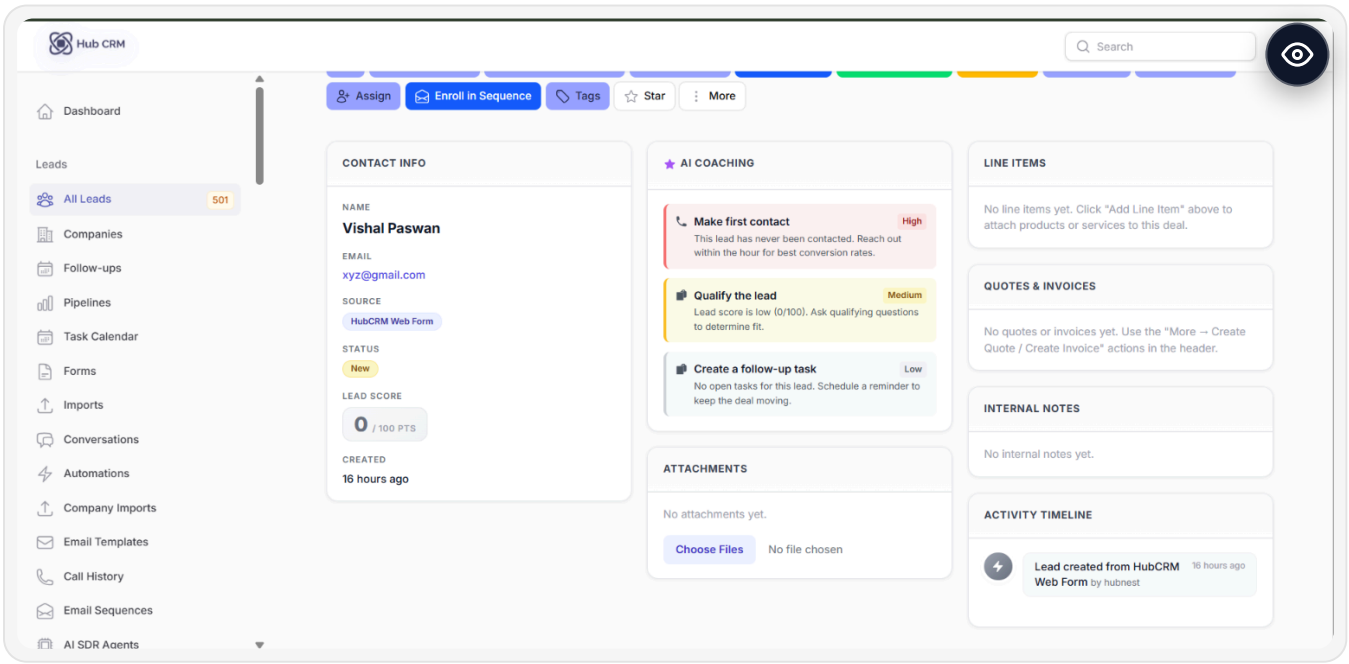

Duplicates

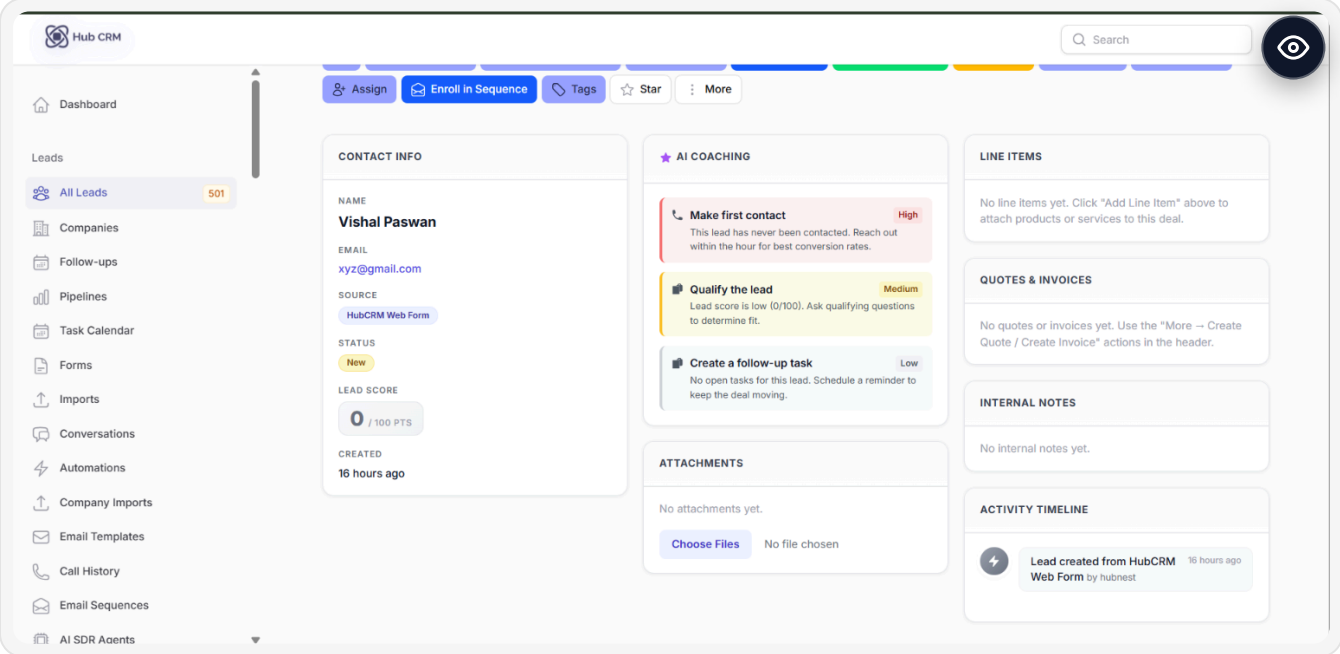

If the email or phone matches an existing lead, HubCRM warns you and marks the lead as a possible duplicate. Admins can merge duplicates.

The lead detail page

Click a lead to open it. The page has the lead's summary, tabs and action buttons.

Area	Use it for
Header actions	Call, WhatsApp, SMS, Email, Schedule follow-up, Change status, Move stage, Assign, Run automation, Enroll in sequence
Next action / follow-up	The next scheduled step and its due time - see Follow-ups
Activity timeline	Every change, note, email, message, call and automation run, newest first
Notes	Internal notes; mention teammates
Tasks	To-dos linked to the lead
Attachments	Files uploaded to the lead
Attribution	UTM source/medium/campaign, landing page and referrer captured from forms and widgets
Quotes / Invoices	Documents created for this lead - see Quotes & invoices
Calls	Call history with recordings and notes - see Calls & messages

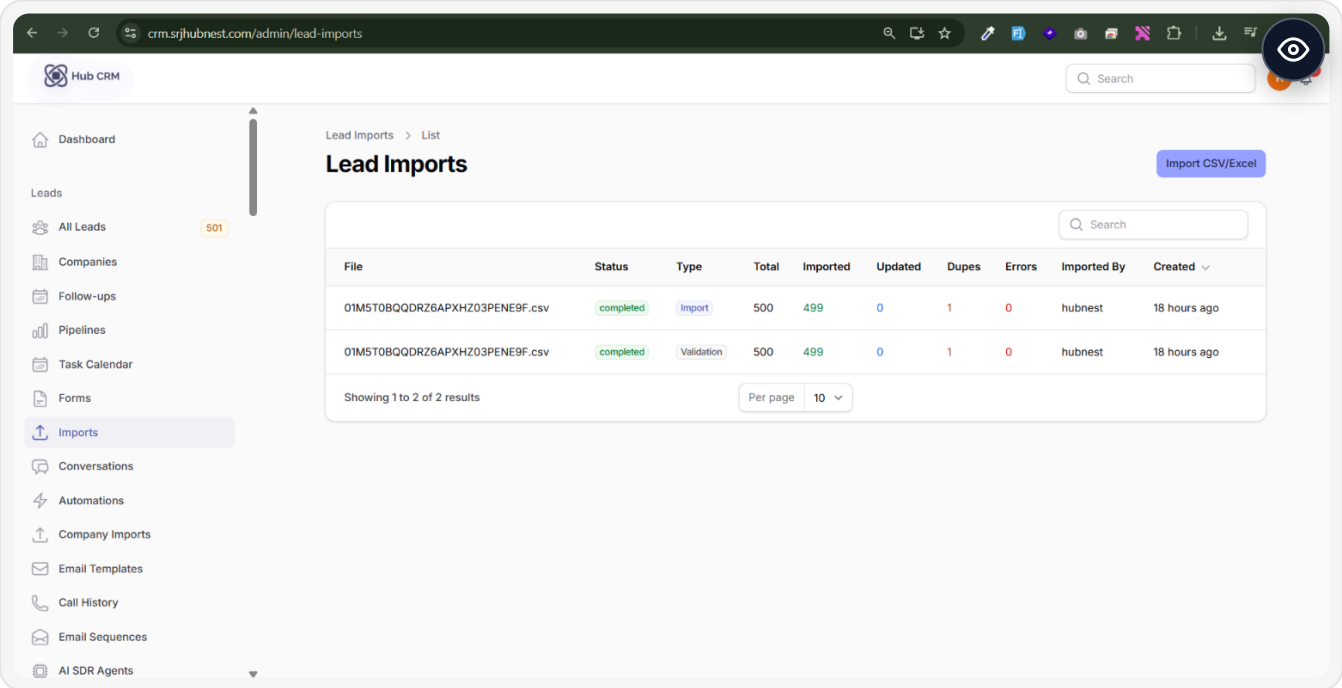

Bulk actions

Tick the boxes on the left of several leads, then use **Bulk actions**:

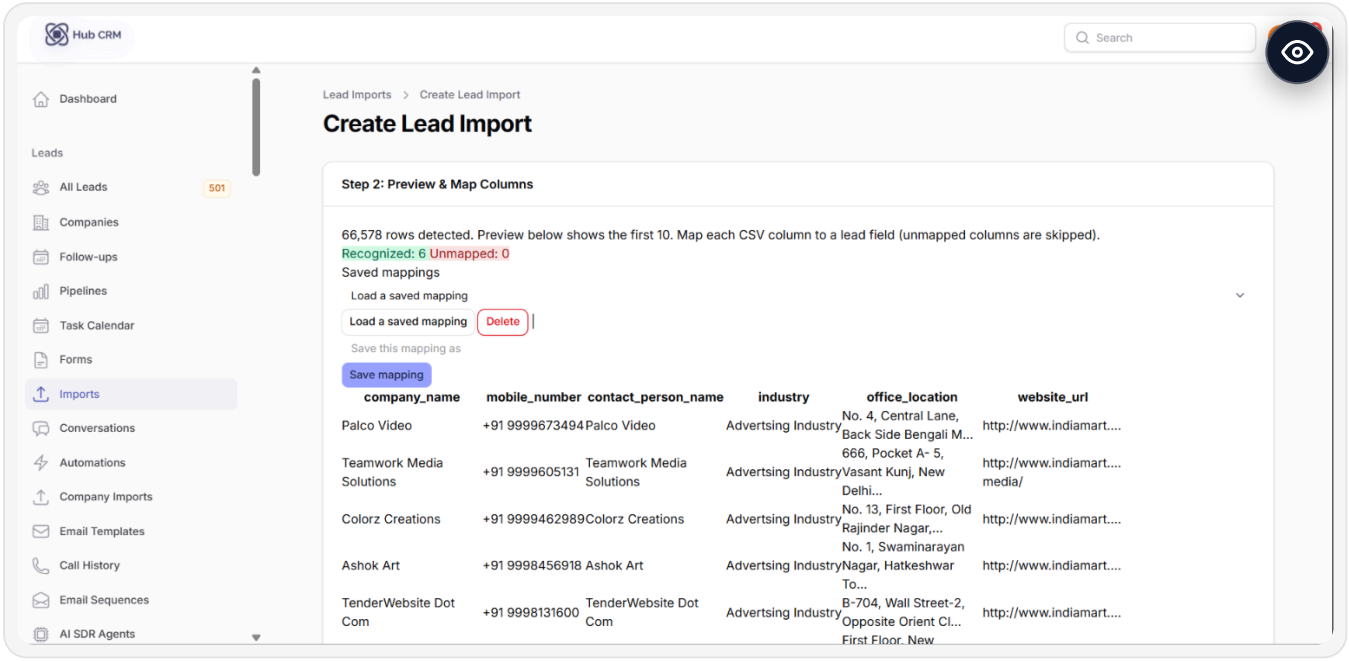

Action	Effect
Assign Agent	Give all selected leads to one agent, or spread them evenly (round robin) across several
Change Status	Set the same status on all
Move to Stage	Move all to a pipeline stage
Add Tag / Remove Tag	Tag or untag in one go
Update a field	Set the same value in any bulk-editable field
Schedule follow-up	Create a follow-up on each selected lead
Run Automation	Start an automation for each lead
Enroll in sequence	Add to an email sequence
Export Selected (CSV)	Download just these leads

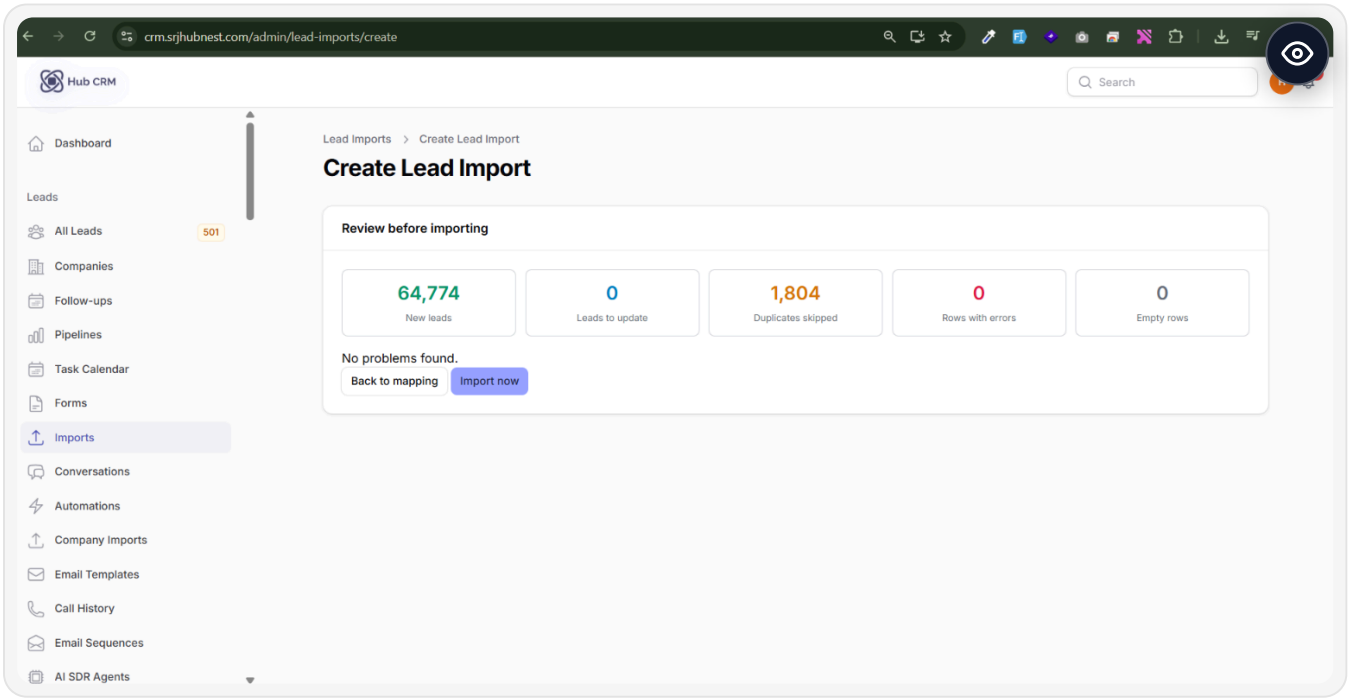

Large selections run in the background and you get a notification when they finish. Every change is written to each lead's history and to the **Audit Log**.

Import and export

- **Import**: **Leads** → **Imports** → **New import**. Upload a CSV or Excel file, map your columns to HubCRM fields, preview, then start. Rows with problems are skipped and listed in a downloadable **error report**.
- **Export**: **Export** on the leads list. Choose the columns, the current filters and search are applied. You get a CSV.

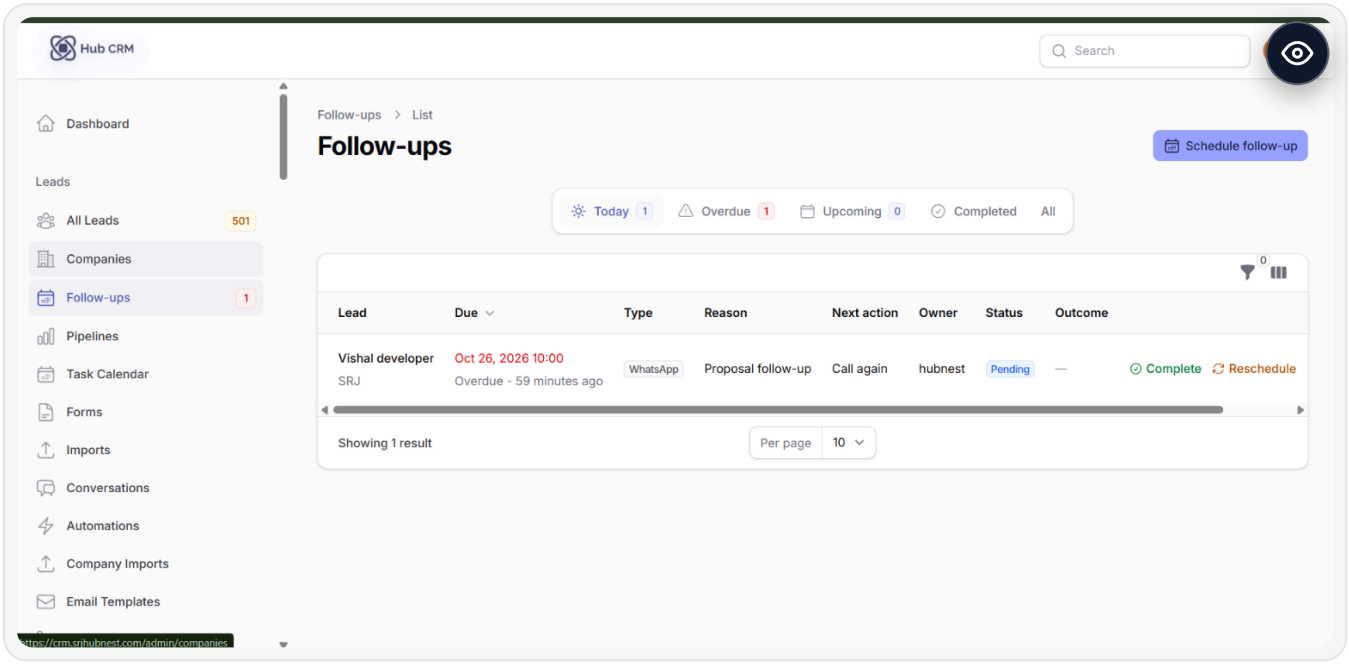

> **Tip**
>
> Fields you are not allowed to see never appear in exports. Admins can always see and export every field.

Follow-ups and Task Calendar

A **follow-up** is a scheduled next step for a lead - a call, WhatsApp, SMS, email, demo or meeting at a set date and time.

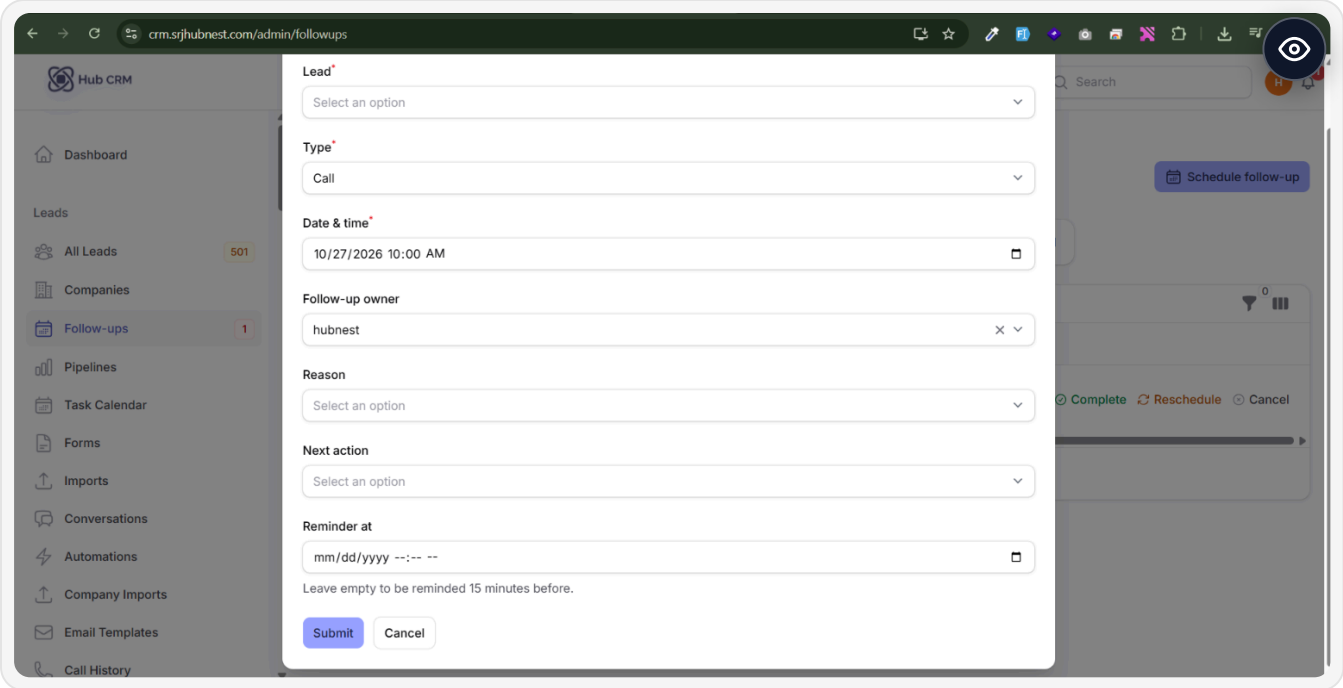

Where follow-ups appear

- **Leads → Follow-ups**: your queue. Tabs: **Today**, **Overdue**, **Upcoming**, **Completed**, **All**. Use **My follow-ups** to see only yours.
- **Lead detail → Follow-ups** tab: all follow-ups of one lead, with history.
- **Leads list**: filter by *Overdue / Due today / Due tomorrow / Next 7 days / None*.
- **Dashboard and notifications**: reminders and overdue alerts.

Schedule a follow-up

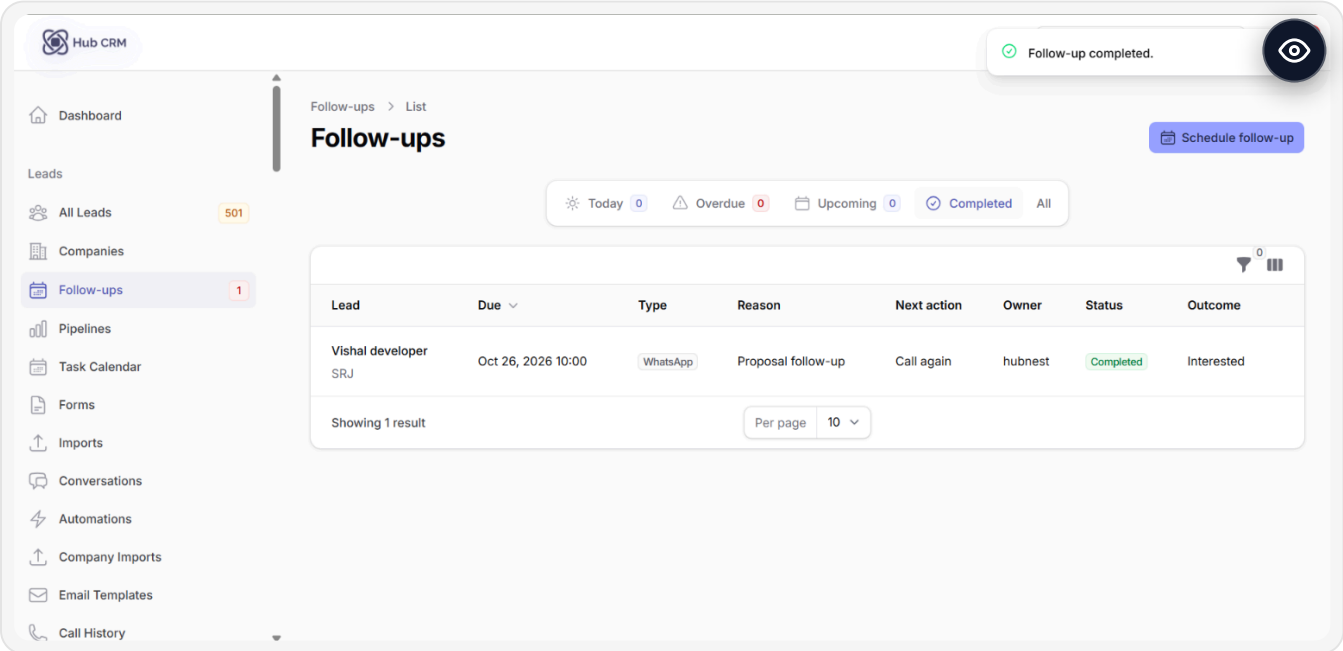

1. Open a lead and click **Schedule follow-up** (or use it from the leads list or as a bulk action).
2. Choose the **Type**: Call, WhatsApp, SMS, Email, Demo, Meeting or Other.
3. Set **Date & time** and the **Follow-up owner**.
4. Add the **Reason** and the **Next action** (what will you do?).
5. Optionally set **Reminder at** - leave empty to be reminded 15 minutes before.
6. Click **Schedule follow-up**.

Complete a follow-up

When you have done it, click **Complete**:

1. Pick the **Call outcome** (for calls).
2. Write **Calling notes / customer response** - these are saved with the follow-up and appear in the lead's history.
3. Optionally **Update lead status** (or keep the current status).
4. Tick **Schedule the next follow-up** to set the next one straight away.

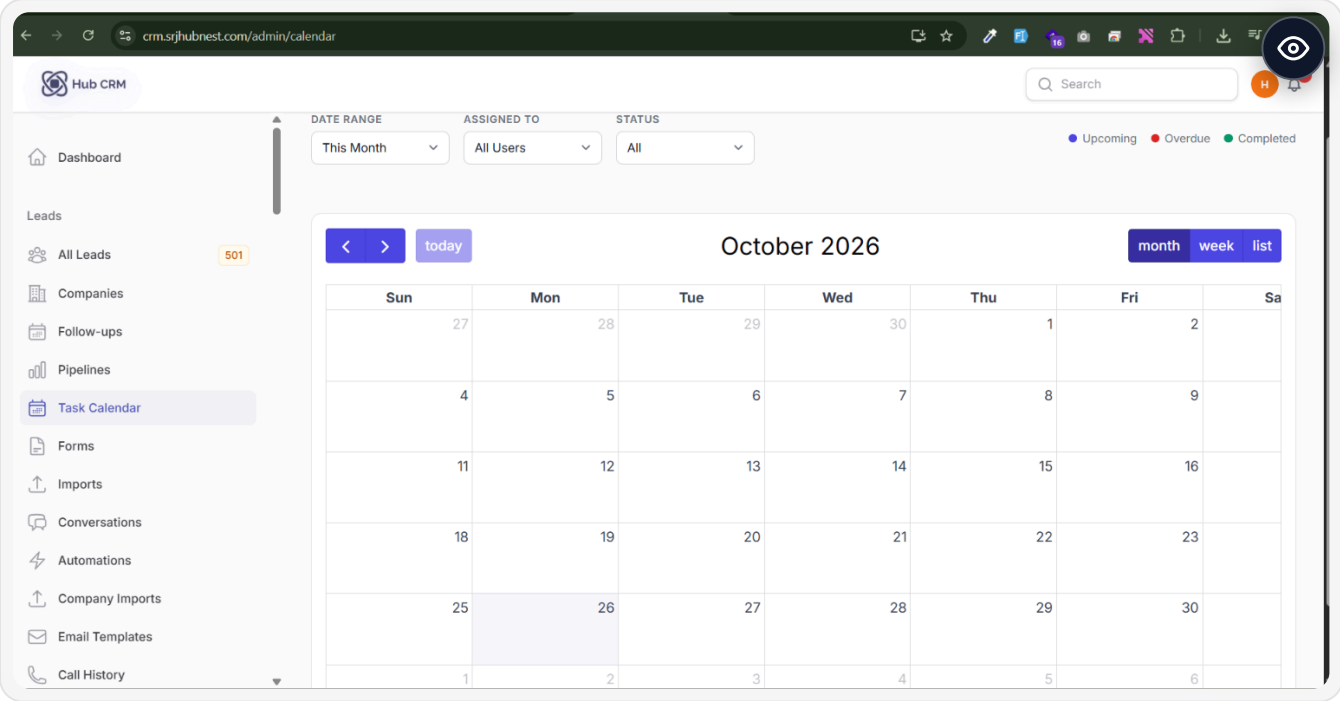

Reschedule or cancel

- **Reschedule**: choose the **New date & time** and say why. The old follow-up stays in the history as *Rescheduled*.
- **Cancel**: the follow-up stays in the history as *Cancelled* (reason optional).
- **Missed**: follow-ups not completed after their time are marked *Missed* and show as **Overdue** until handled.

Task Calendar

Leads → Task Calendar shows follow-ups and tasks on a month, week or day grid. Click an entry to open the lead; drag to change the time.

Reports

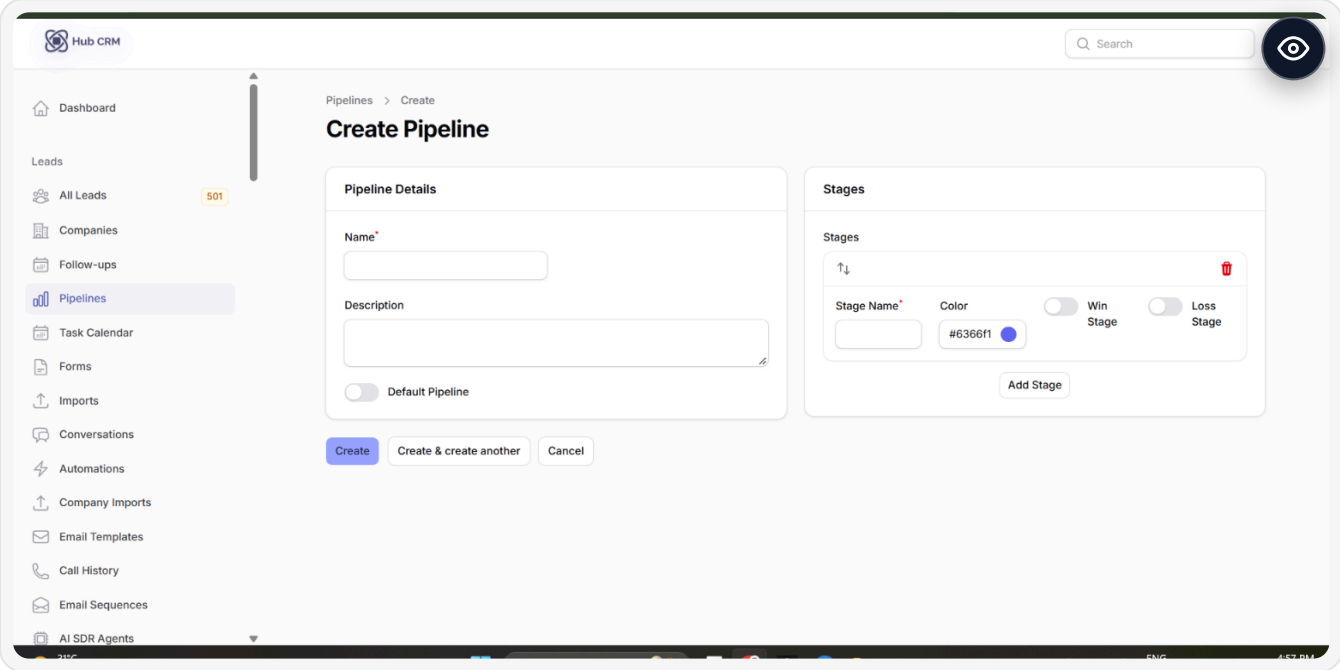

Management can review follow-up discipline in **Reports → Follow-up Performance** (completion, overdue, on-time rate per agent). See Reports.

Pipelines and Kanban Board

A **pipeline** is the set of stages a deal moves through, for example *New* → *Qualified* → *Proposal* → *Won*.

Create or edit a pipeline

1. Go to **Leads** → **Pipelines** and click **New Pipeline**.
2. Enter the **Name** and an optional **Description**.
3. Under **Stages**, click **Add Stage** for each step. Give each a **Stage Name** and **Color**, and drag to reorder.
4. Mark one stage as the **Win Stage** and one as the **Loss Stage**. Moving a lead there closes the deal as won or lost.
5. Tick **Default Pipeline** if new leads should land here.
6. Save.

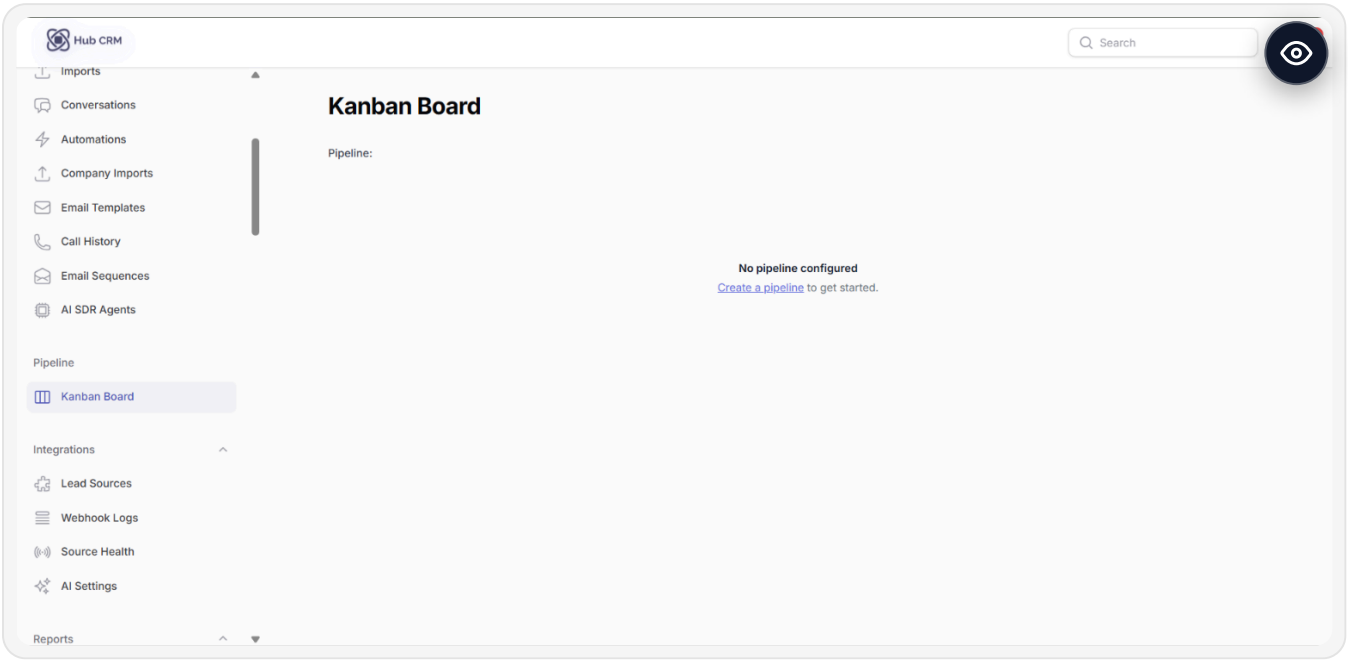

> **Tip**
>
> You can have more than one pipeline - for example one per product or sales team - and choose the pipeline on each lead.

The Kanban board

Open **Pipeline** → **Kanban Board**. Each column is a stage; each card is a lead showing name, company, deal value, score and next follow-up.

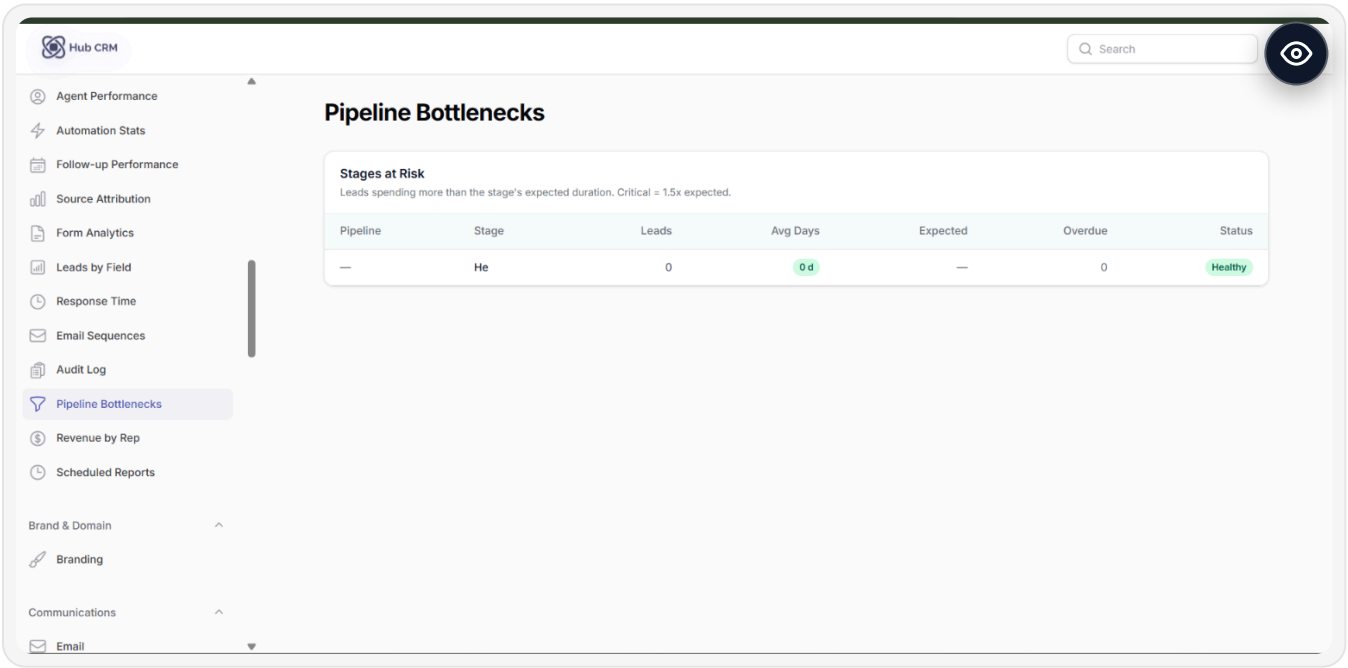

- **Drag a card** to another column to move the lead (recorded in its history; stage-change automations fire).

- Use the **pipeline selector** at the top to switch pipelines, and the filters to narrow by agent, source or tag.
- Column headers show the number of leads and total deal value.
- Click a card to open the lead.

Find where deals get stuck

Reports → Pipeline Bottlenecks shows how long deals stay in each stage and where they stall. **Reports → Pipeline Funnel** shows stage-to-stage conversion. See Reports.

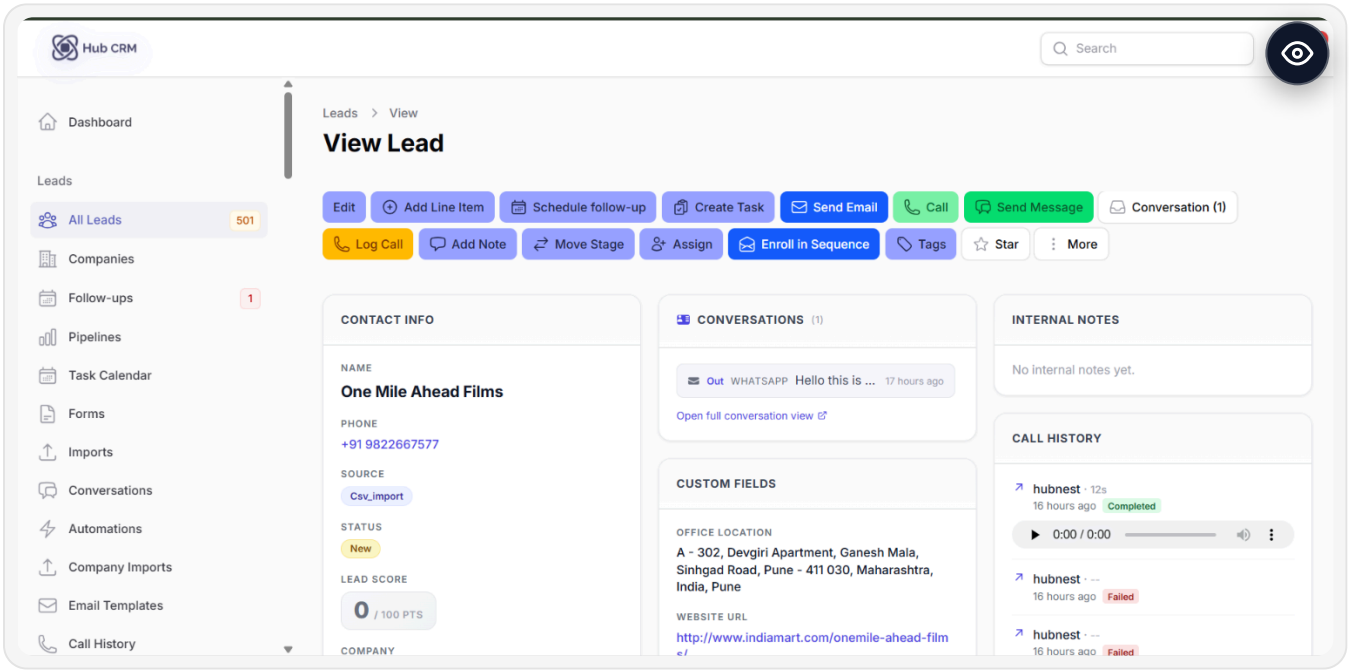

Calls, WhatsApp and SMS

Click-to-call

If your workspace is connected to **HubCall** (see Integrations & API), you can call a lead without leaving the lead page.

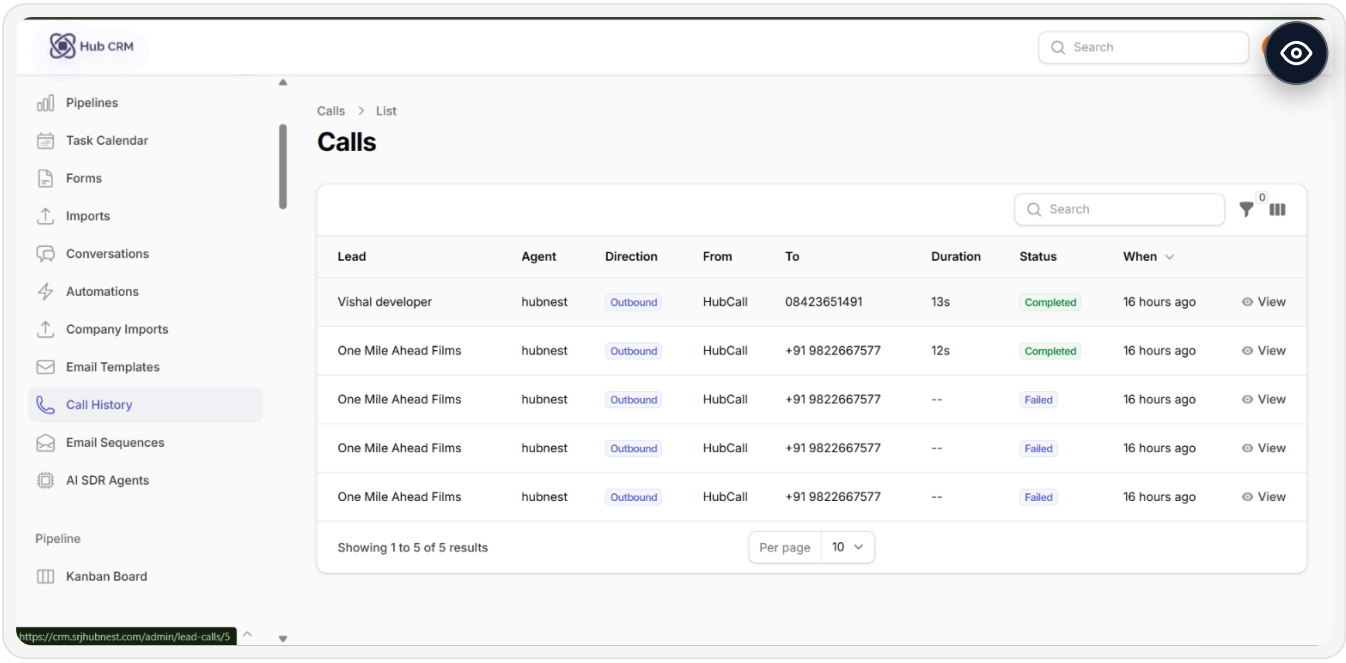

1. Make sure your own phone number is saved in **Settings** → **My Profile** → **Phone**. HubCall first rings **your** phone, then connects the lead.
2. Open a lead and click **Call**.
3. Answer your phone. The lead's phone rings next and the call is bridged.
4. When you finish, HubCRM asks for the **call outcome** and **notes**; you can also schedule the next follow-up.

> **Which number do leads see?**
>
> Leads see the number your admin enabled for **HubCRM Calling** in HubCall. If no number is enabled, the call button explains what to configure.

Call History

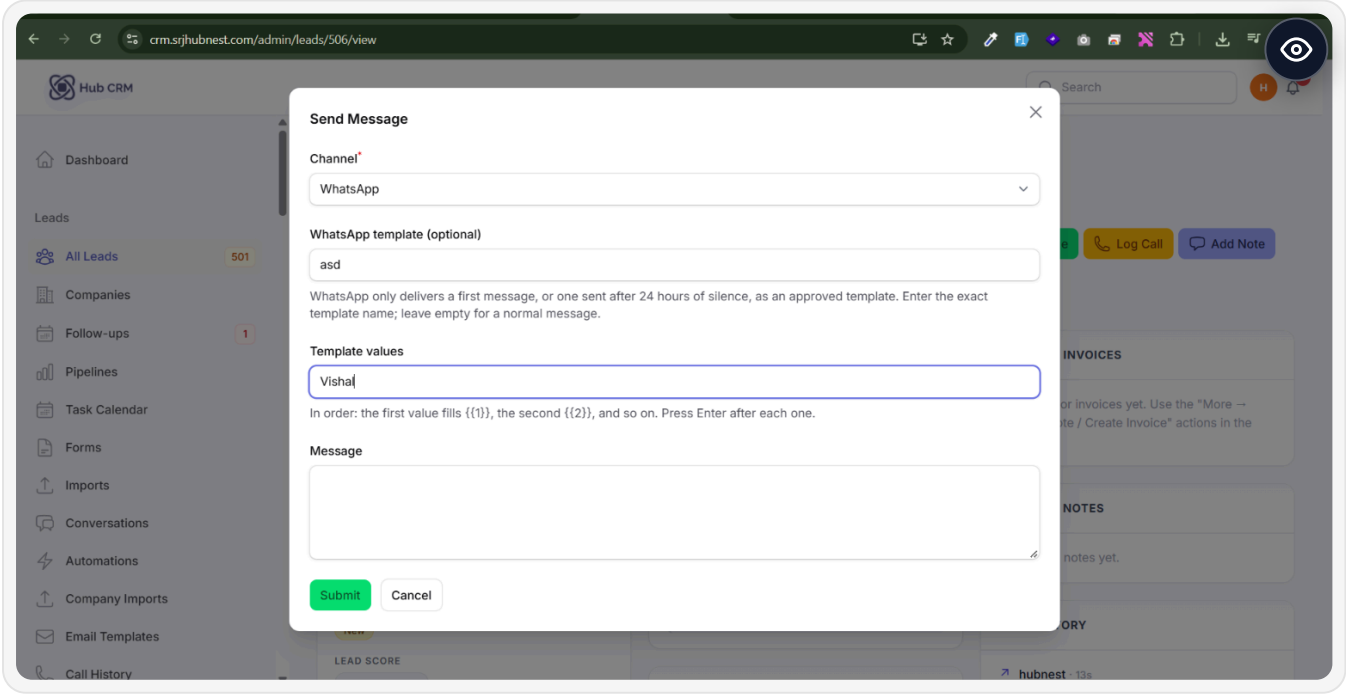

Leads → **Call History** lists every call: lead, agent, direction, status, duration, time and notes. For completed calls with recording enabled, click **Play** to listen in the browser. Calls with a transcript show it on the call.

WhatsApp and SMS

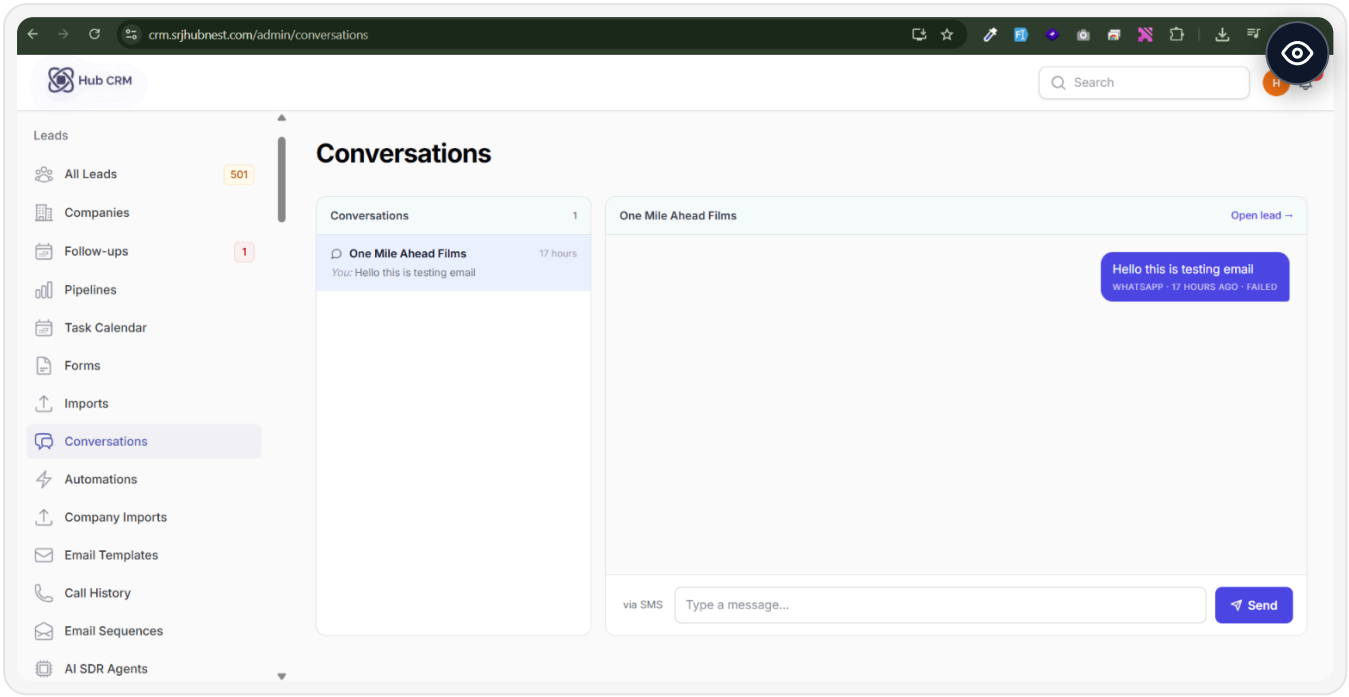

From a lead, click **WhatsApp** or **SMS**, write the message and send. Messages are sent through your connected provider (HubNotification or your own WhatsApp Business / SMS provider - configured in **Communications → Messaging Providers**).

- **WhatsApp free-form messages** only deliver within 24 hours of the lead messaging you. To start a conversation use an **approved template** (enter the template name exactly as in WhatsApp Manager).
- Replies from leads arrive in **Conversations** and on the lead's timeline.

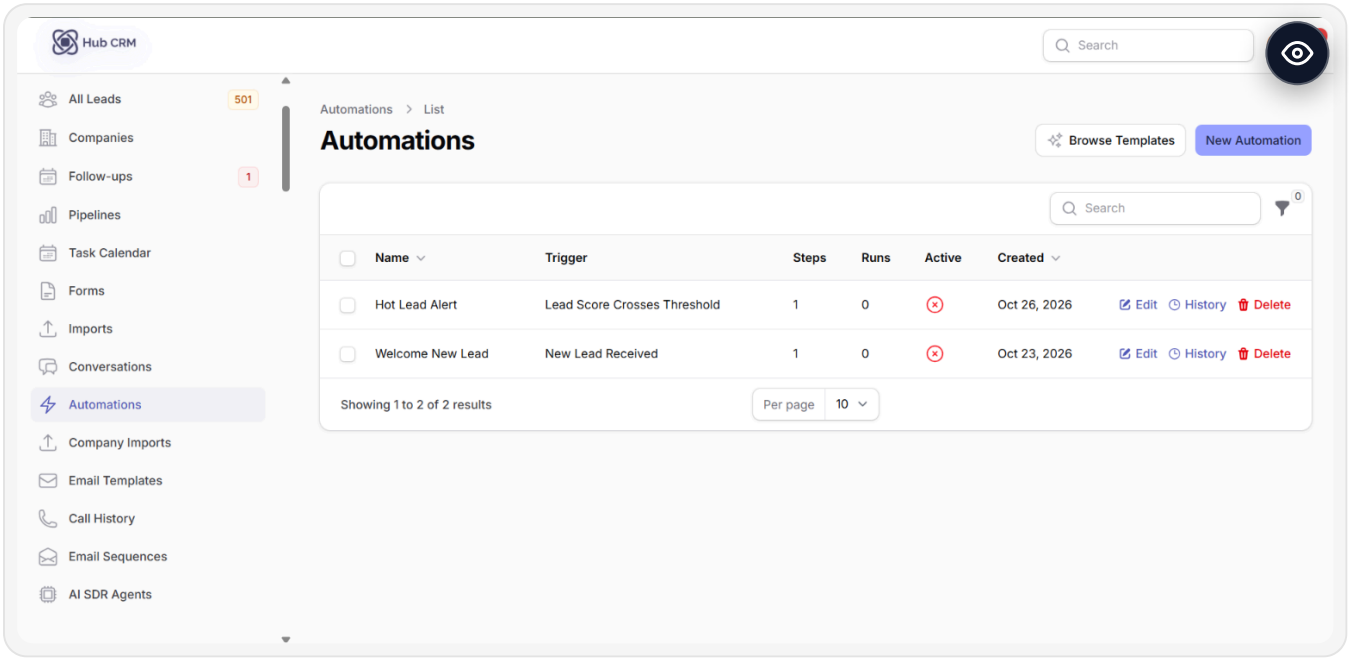

Conversations inbox

Leads → Conversations is a unified inbox of leads' messages (WhatsApp, SMS and email replies). Pick a conversation on the left, read the thread and reply. The **Waiting On** filter on the leads list tells you who owes the next reply.

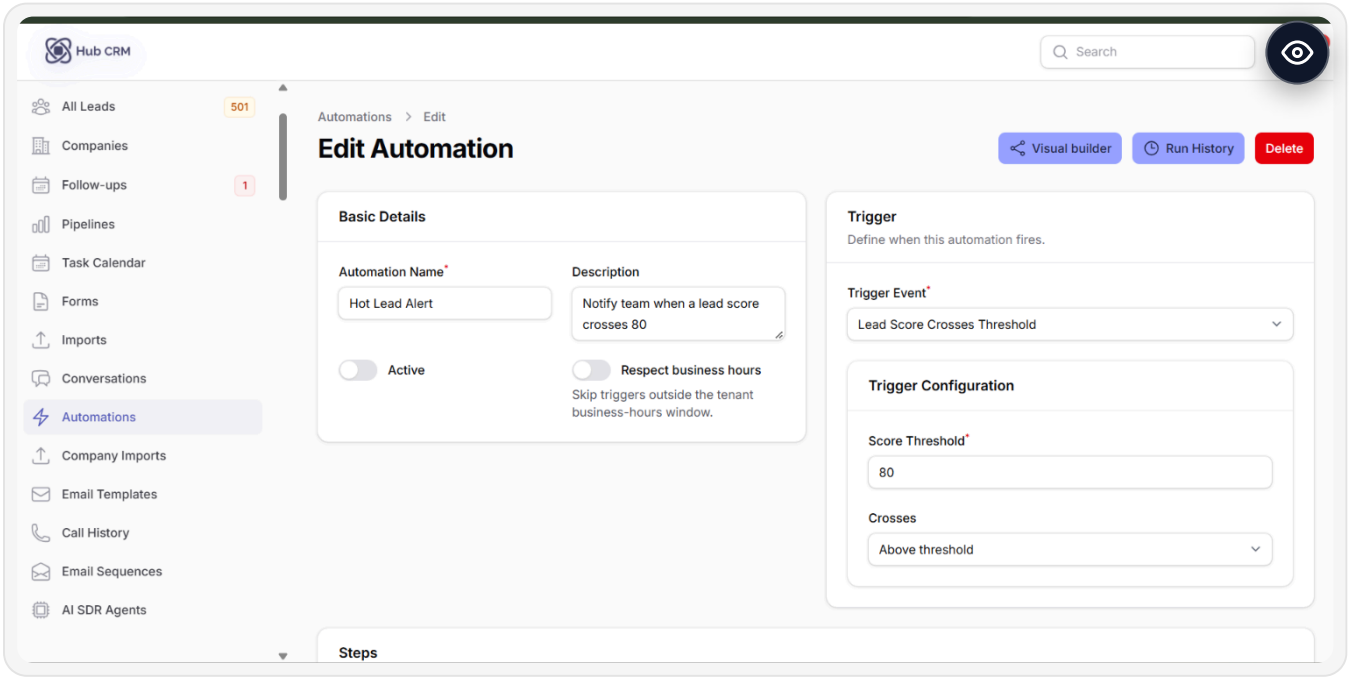

Automations

An **automation** does work for you when something happens - for example, assign a new web lead to the next agent, create a task, and send a welcome WhatsApp.

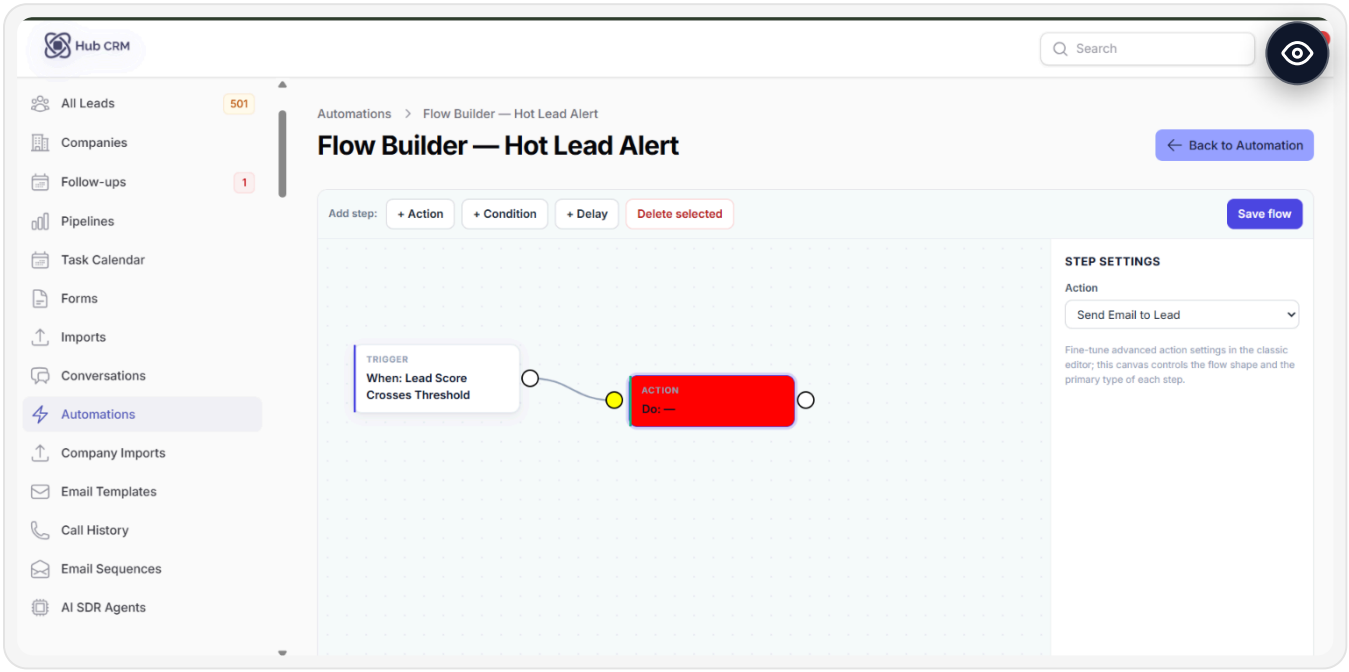

Start from a template

1. Open **Leads** → **Automations** and click **Browse templates** (or **Tools** → **Automation Templates**).
2. Pick a template, preview its steps and click **Use template**.
3. Review and adjust the steps, then switch the automation **Active**.

Build your own

1. Click **New Automation**, enter a **Name** and **Description**.
2. Choose the **Trigger Event** - when should it fire?
3. Add **steps**. They run top to bottom; drag to reorder.
4. Turn on **Respect business hours** if it should skip triggers outside your business-hours window.
5. Turn on **Active** and save.

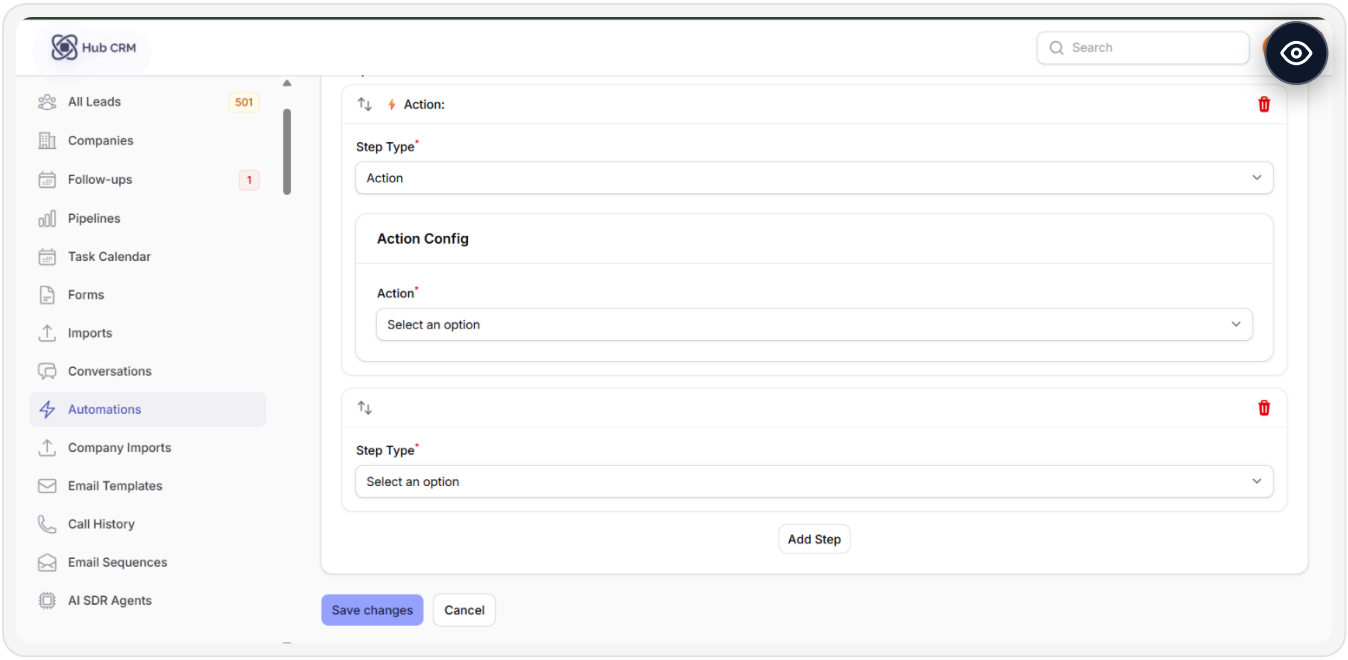

Triggers

New lead, lead updated, status changed, moved from stage / to stage, tag added, score crosses a threshold, no activity for a period, a date field approaching (birthday, anniversary - repeats yearly), form submitted, and more. Filters such as *Source(s)* or *Form* narrow when it fires.

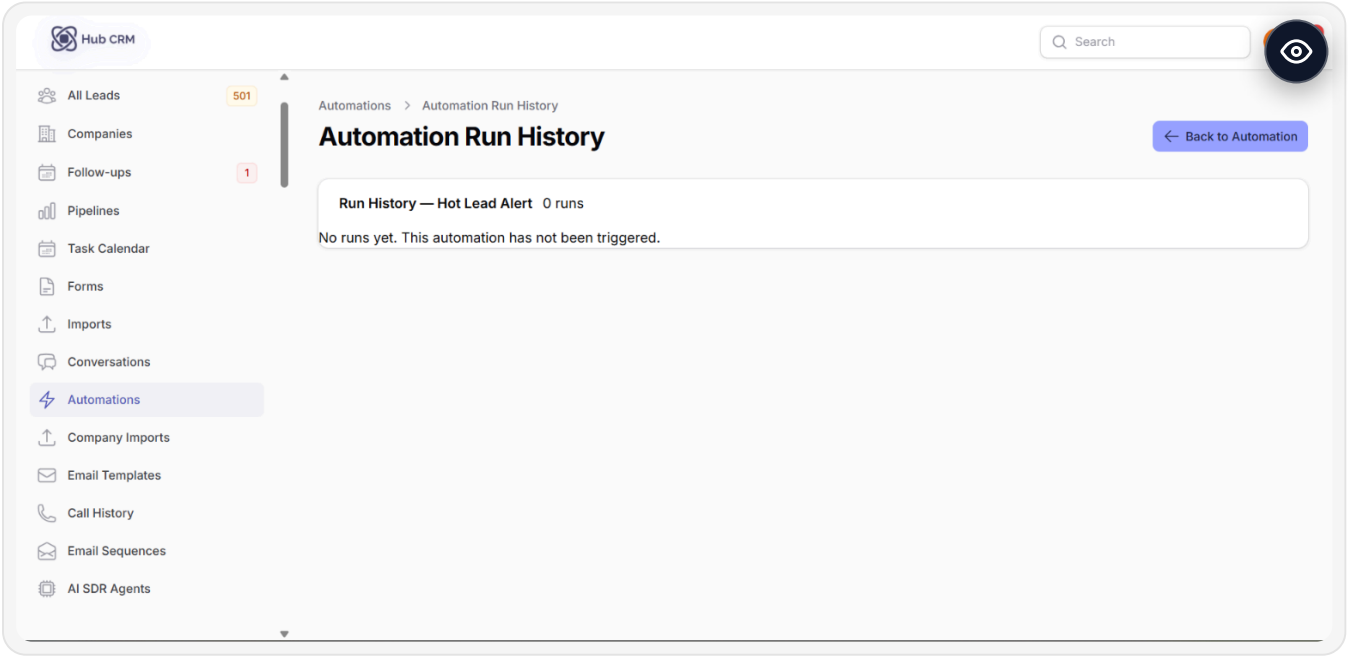

Step types

Step	What you configure
Condition	Filter by source, field value, score, user, time range (e.g. 09:00-17:00) or days of the week
Delay	Wait a number of minutes, hours or days
Send email	Choose an email template
Send SMS / WhatsApp	Message text with merge fields like `{{first_name}}`; WhatsApp can use a free-form message or an approved template
Assign lead	One user or a round-robin pool
Change status / Move pipeline stage	Target status or stage
Add / remove tag	Tag name
Create task	Title (supports `{first_name}`), due in hours, priority, assignee
Notify users	Pick users, optionally the assigned agent, custom message
Slack message / Webhook	Slack webhook URL; or any URL with optional HMAC secret, headers and custom JSON payload
Enroll in email sequence / AI SDR agent	Choose the sequence or agent

Monitor runs

- Click **Run history** on an automation to see each run, its steps and any error.
- The **Automations** sidebar item shows a badge when runs failed in the last 24 hours.
- **Reports** → **Automation Stats** summarises runs, success rate and top automations.

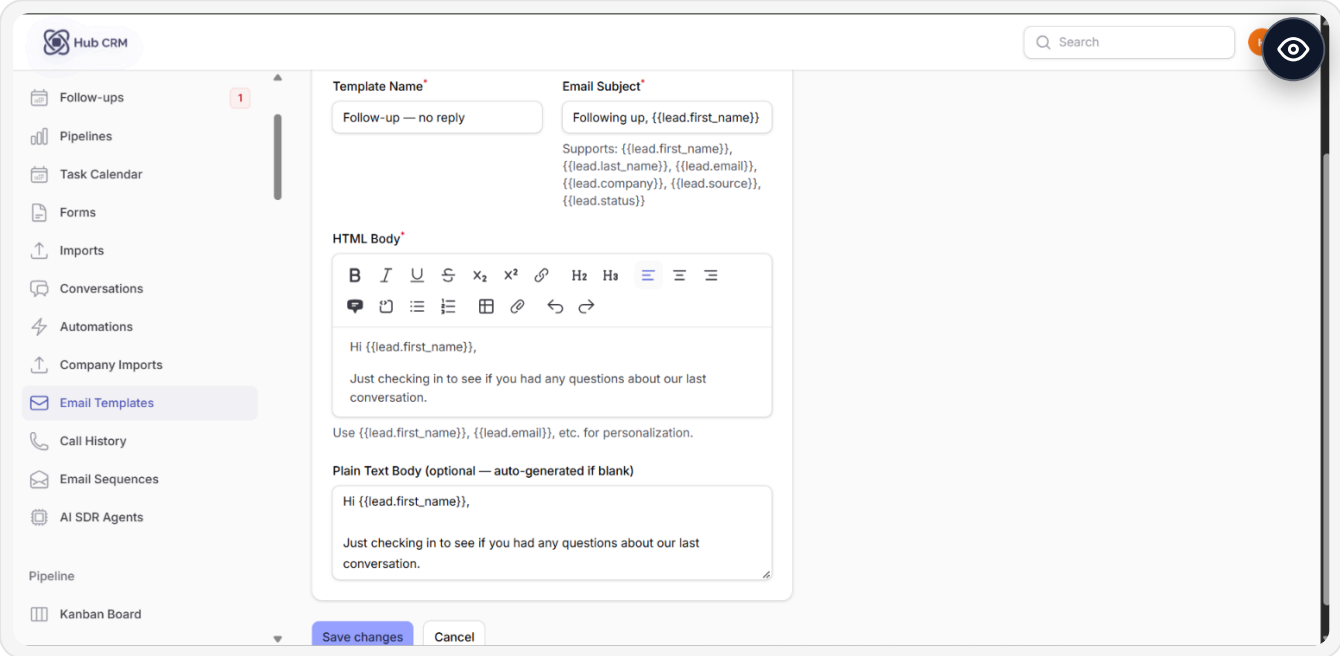

> **Warning**
>
> Disable (**Disable** action) an automation before editing a live one that sends messages, so a half-edited flow does not message customers.

Email Templates, Sequences and AI SDR

Set up your sending address first in **Communications** → **Email** (see Settings).

Email templates

Leads → **Email Templates** → **New**: enter a **Name**, **Subject** and body. Use merge fields such as `{{first_name}}` and `{{company}}`. Templates are used when you email a lead, in automations and in sequences.

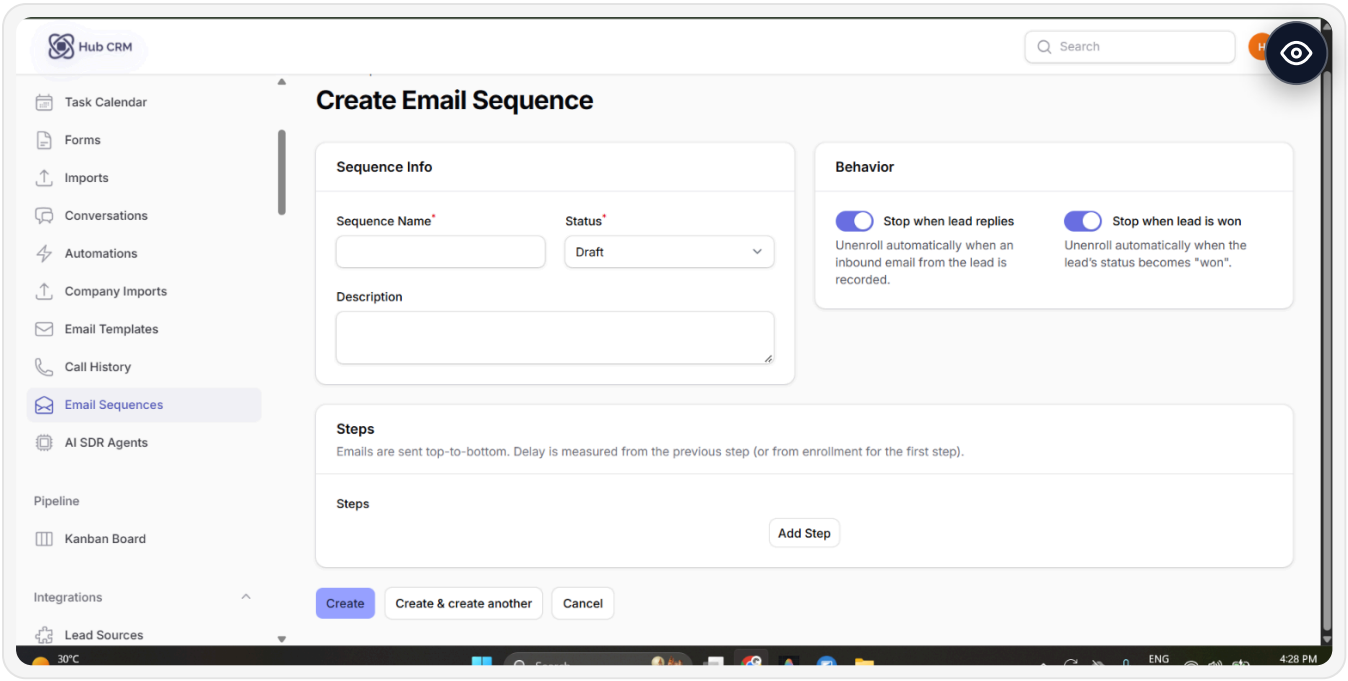

Email sequences

A **sequence** is a series of emails sent automatically over days, stopping when the lead replies.

1. **Leads** → **Email Sequences** → **New Sequence**, give it a name.
2. Add **steps**: choose the template and the **delay** after the previous step.
3. Use **Preview** to see an email and **Test send** to send it to yourself.
4. **Enroll** leads - from a lead, a bulk action, or an automation step.
5. Use **Duplicate** to copy a sequence.

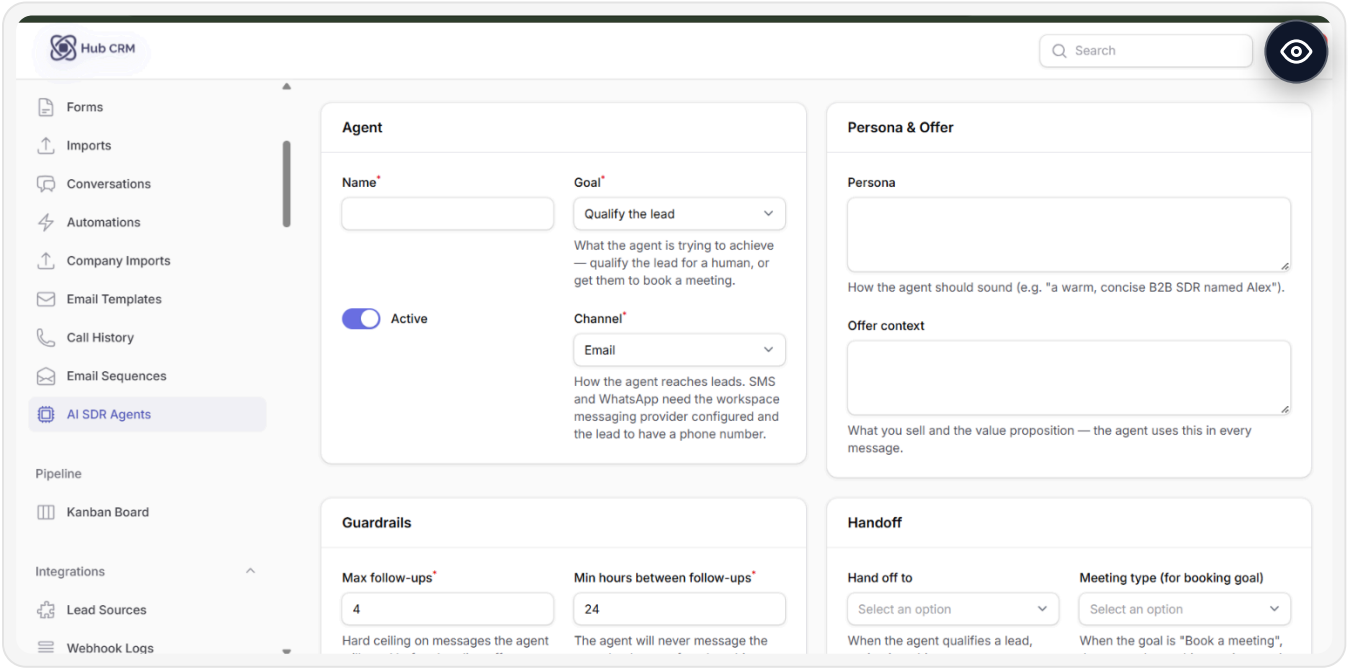

Track results in **Reports** → **Email Sequences**.

AI SDR Agents

An **AI SDR agent** writes and sends personalised outreach and decides the next step for each enrolled lead.

1. Make sure AI is configured in **Integrations** → **AI Settings**.
2. **Leads** → **AI SDR Agents** → **New**: name the agent, describe your offer and tone, set limits.
3. Enroll leads (bulk action or automation step).
4. Review the messages and decisions the agent made on each lead's timeline.

Lead Capture

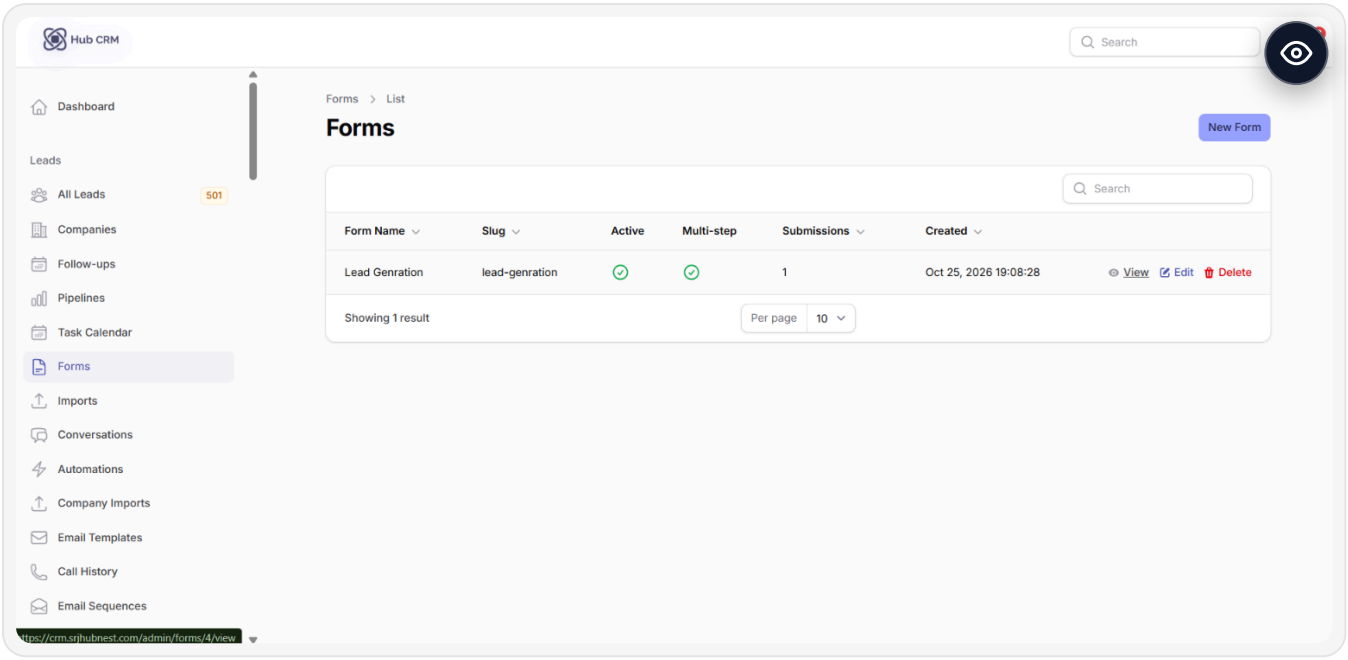

Everything that brings leads in without typing them by hand.

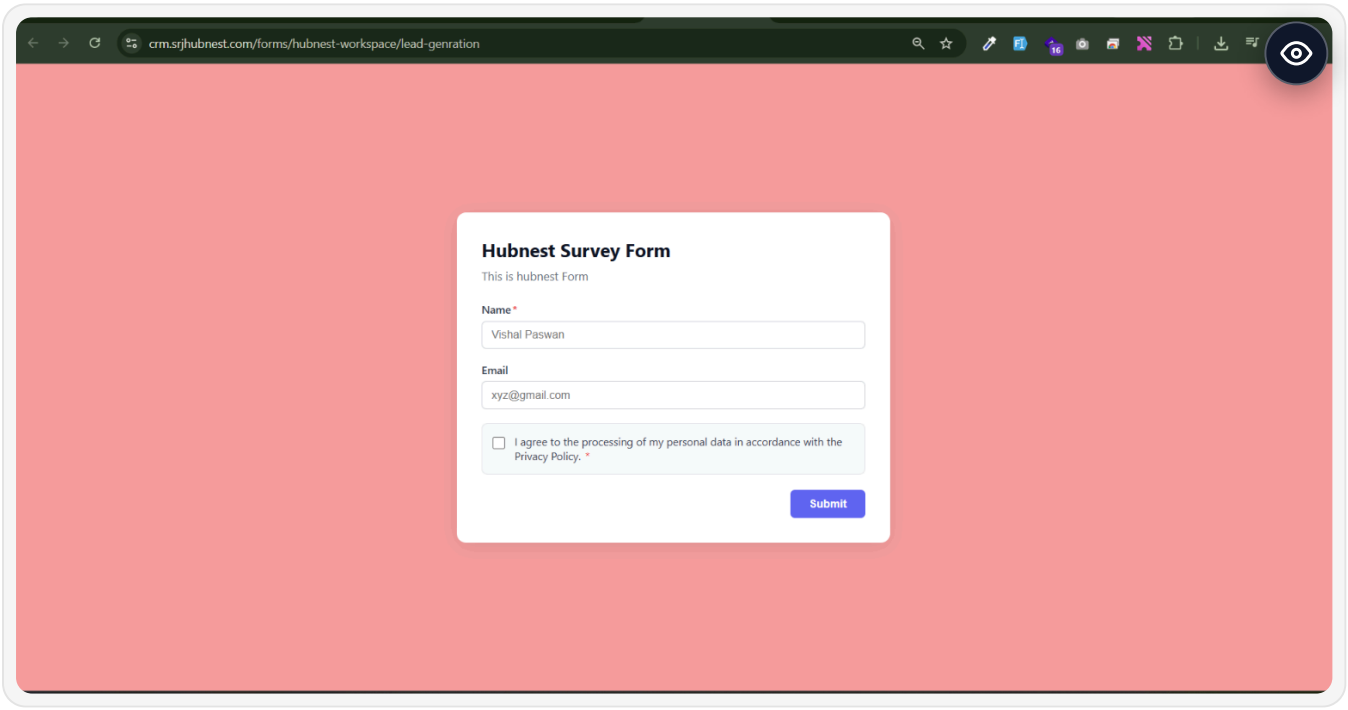

Forms

Leads → Forms → New Form

1. **Form Name**, **Slug** (used in the public URL), **Display Title**, **Description**.
2. Set the **Submit Button Label**, **Thank-You Message** or a **Redirect URL**.
3. Add fields with **Add Field**: choose the **Field Type**, **Label**, **Placeholder**, **Required**, and the **Field Key** that maps the answer to a lead field (for example `email`, `first_name`). Drag to reorder.
4. Turn on **Multi-Step Form** to group fields into numbered steps.
5. Choose the **Pipeline** and **Stage** new leads should enter.
6. Style it: **Background colour/image, Google Font, Logo URL**. Optionally enable **reCAPTCHA v3**.
7. Share the public link or paste the **embed snippet** into any website.

A **GDPR consent** field is always added last and cannot be removed.

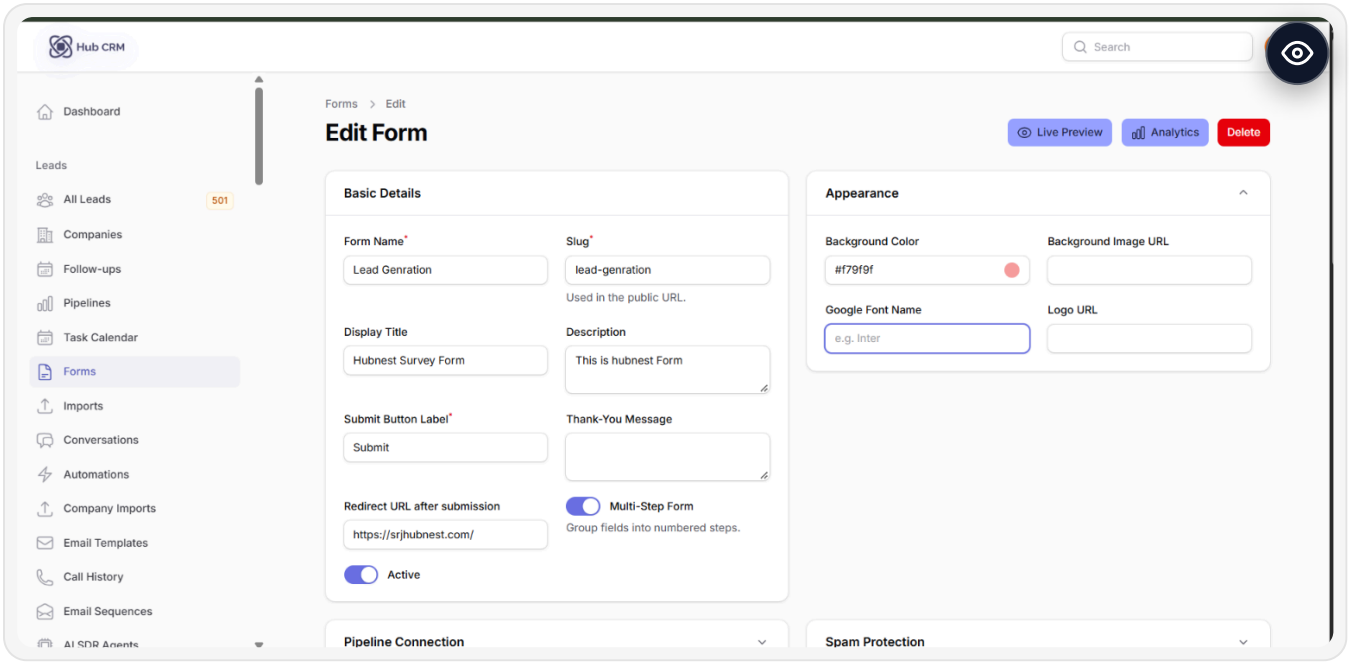

Results: **Reports** → **Form Analytics** (views, submissions, conversion rate).

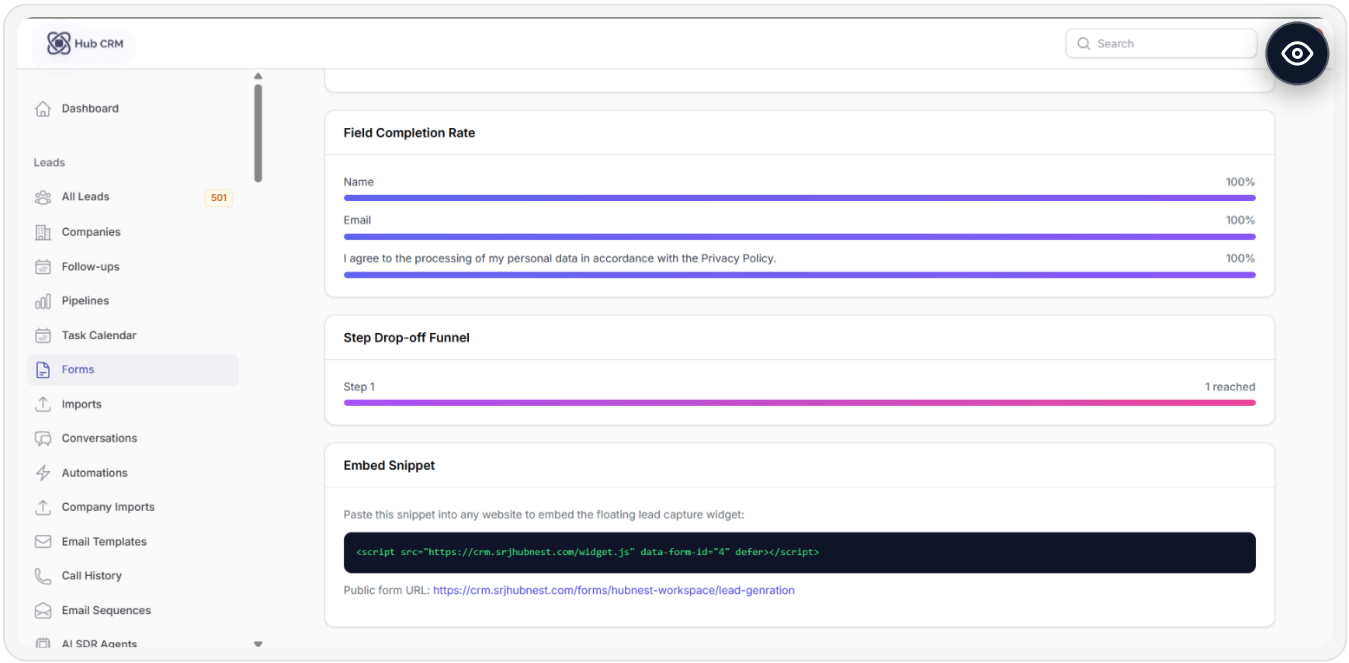

Landing Pages

Tools → **Landing Pages** → **New**: pick a template, edit sections (headline, benefits, form, call to action), choose the connected form, then **Preview** and publish. Leads from the page carry their UTM and landing-page attribution.

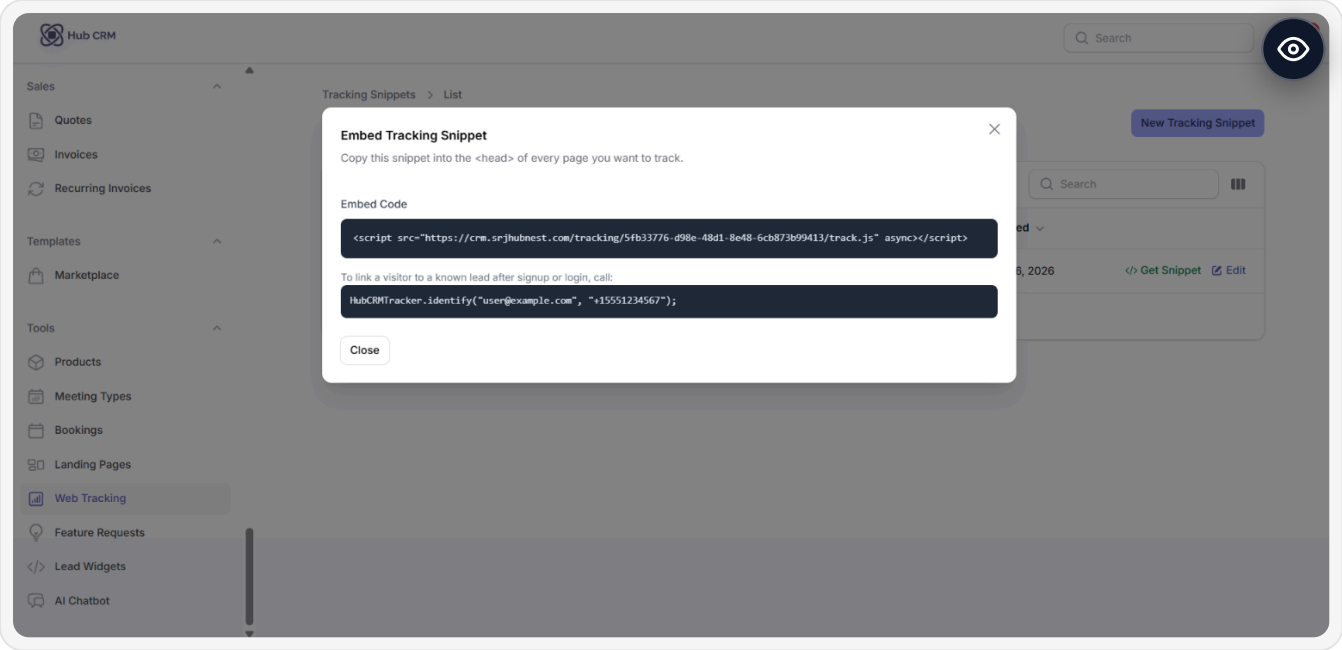

Lead Widgets

Tools → **Lead Widgets** → **New**: a floating button or small form for any website. Set title, colours, position and the fields to ask, then click **Get snippet** and paste the code before `</body>`.

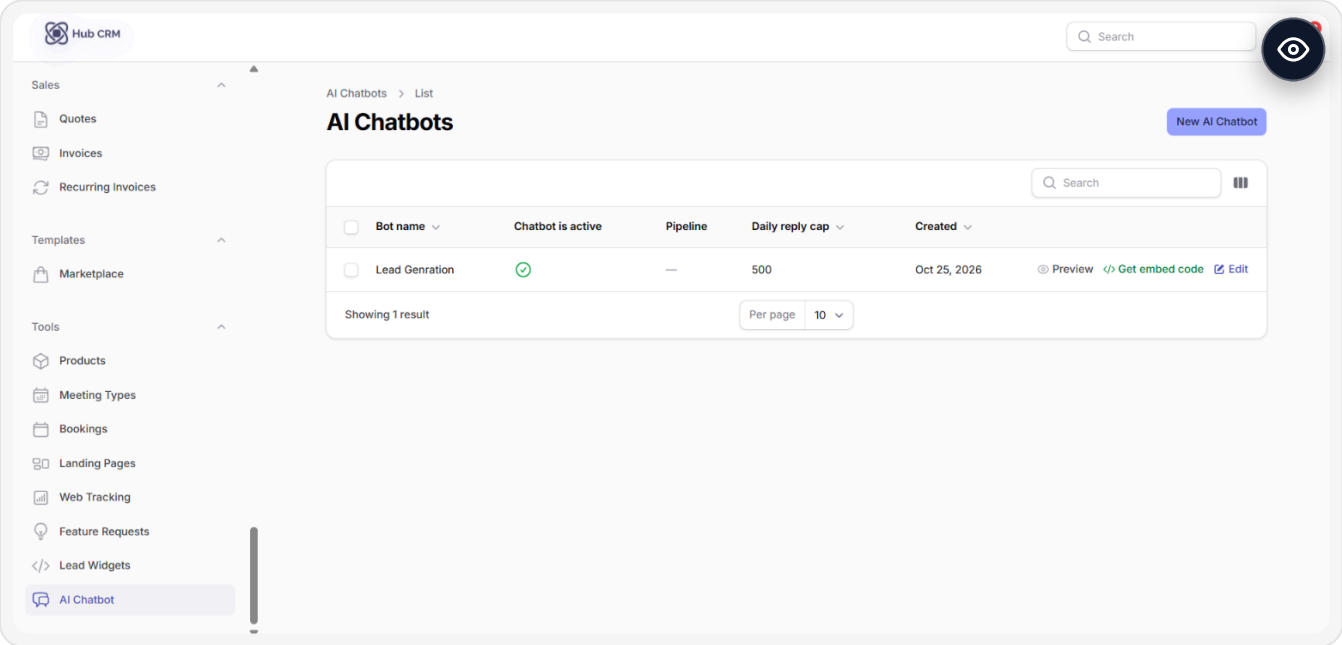

Web Tracking

Tools → **Web Tracking** creates a tracking snippet. Install it on your site to record visits and attach page views, UTM data and referrer to leads that later submit a form.

AI Chatbot

Tools → **AI Chatbot**: configure a website chat assistant that answers from your knowledge (FAQ and pages you provide) and captures name, email and phone as a lead. Use **Preview** to test it and **Get snippet** to install it.

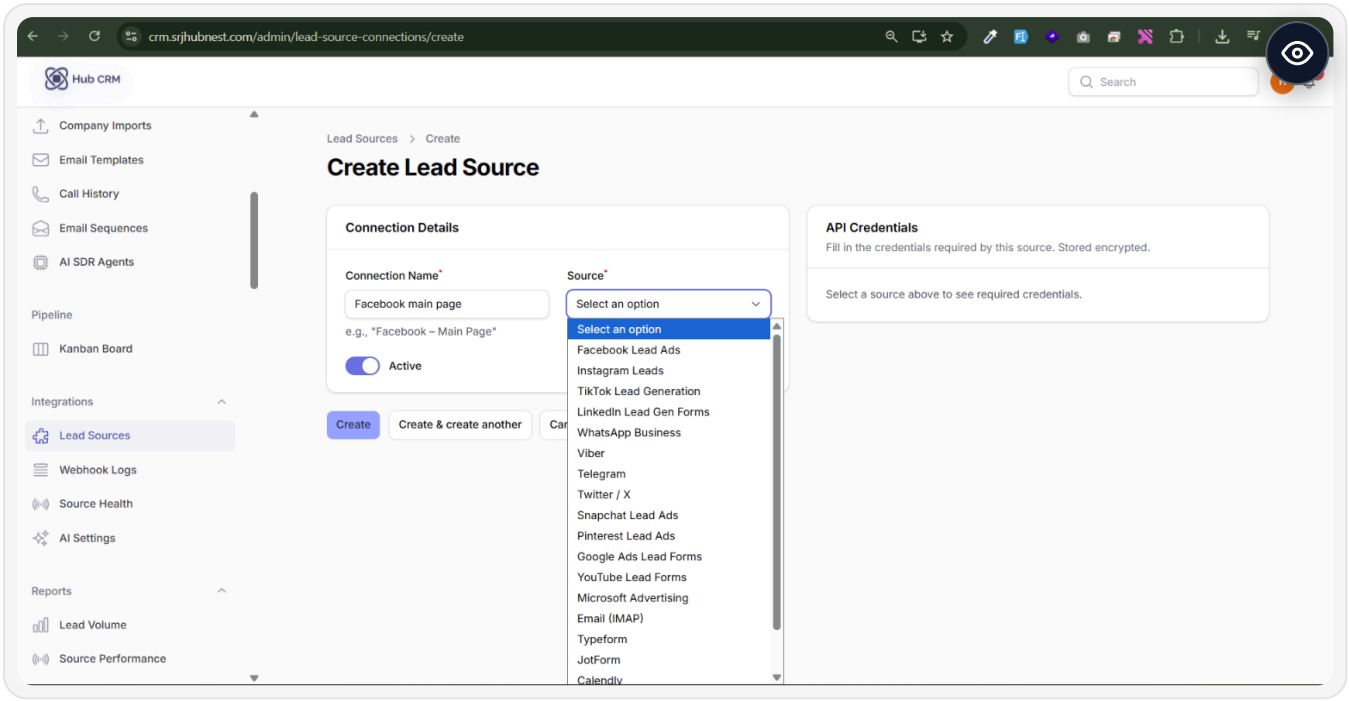

Lead Sources (ad platforms and apps)

Integrations → **Lead Sources** → **New** connects an outside channel so leads arrive automatically: Meta (Facebook/Instagram) Lead Ads, Google Ads, LinkedIn, TikTok, Typeform, JotForm, Calendly, WhatsApp, Telegram, an email inbox (IMAP) and more.

1. Choose the source type.
2. Click **Connect** (OAuth sign-in) or paste the API key / webhook details shown.

3. Click **Test**.

4. Map the destination **pipeline**, **stage** and **assignment**.

Integrations → **Source Health** shows whether each source is receiving leads, the last lead time and errors.

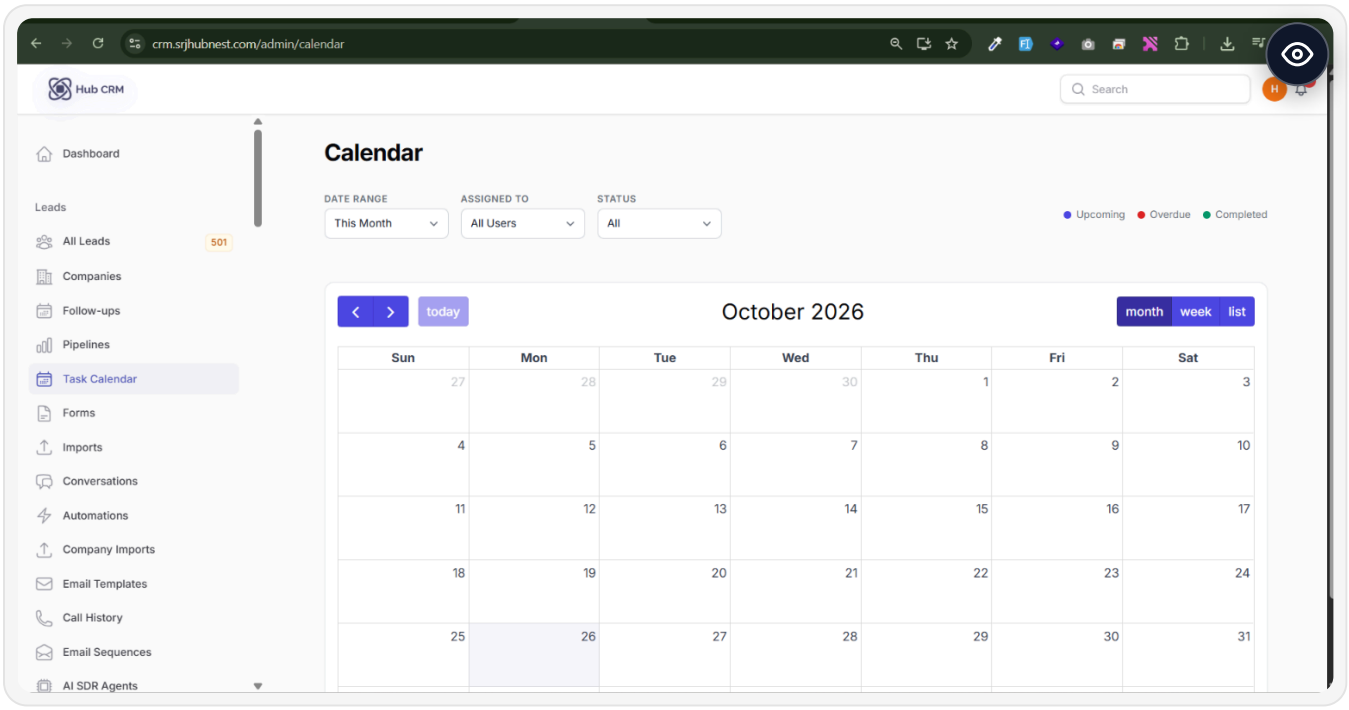

The Source Health screen

A table with one row per connected source: its icon and name, a status dot (green *Healthy*, amber *Slow*, red *Not receiving*), **Last lead received** ("3 hours ago", or "Never" for a new connection), the lead count for the selected period, and an **error message** column that shows the last failure (e.g. an expired access token) when the status is red. Clicking a row opens that source's sync logs. A banner at the top warns you if any source has gone silent for more than 48 hours.

Meetings and Booking

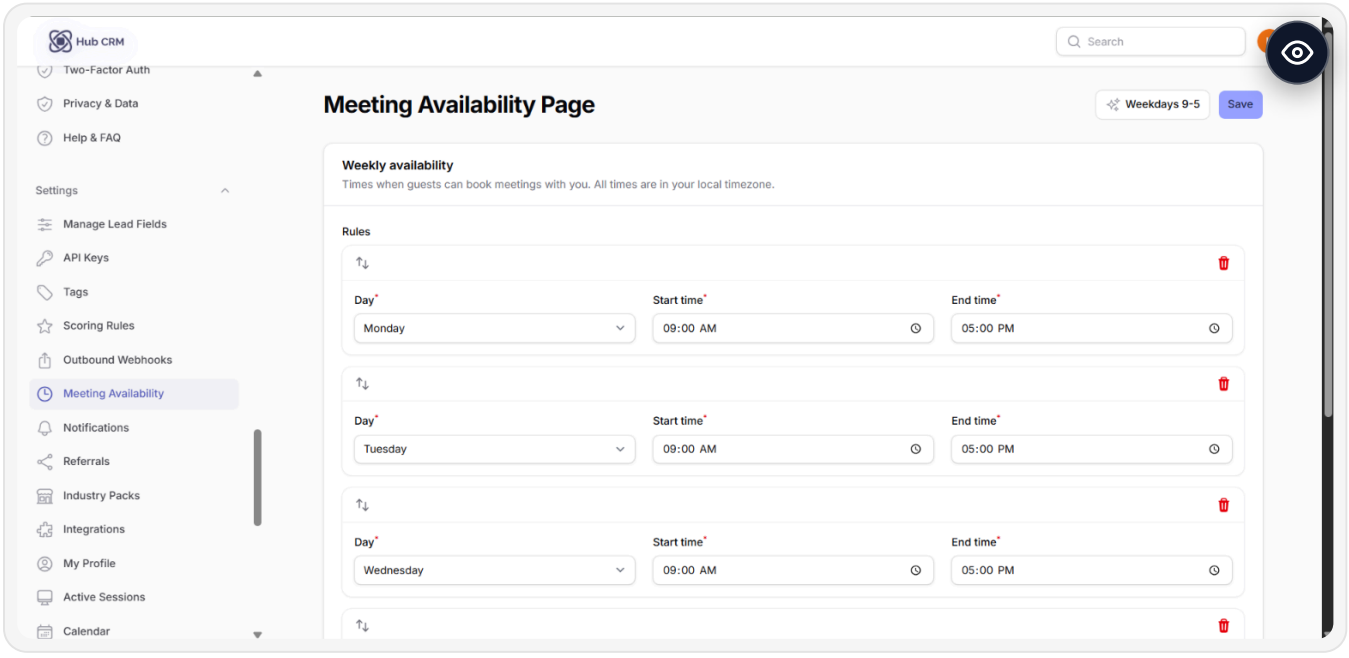

1. Connect your calendar

Settings → **Calendar**: connect Google Calendar or Outlook so bookings appear in your calendar and busy times block the booking page.

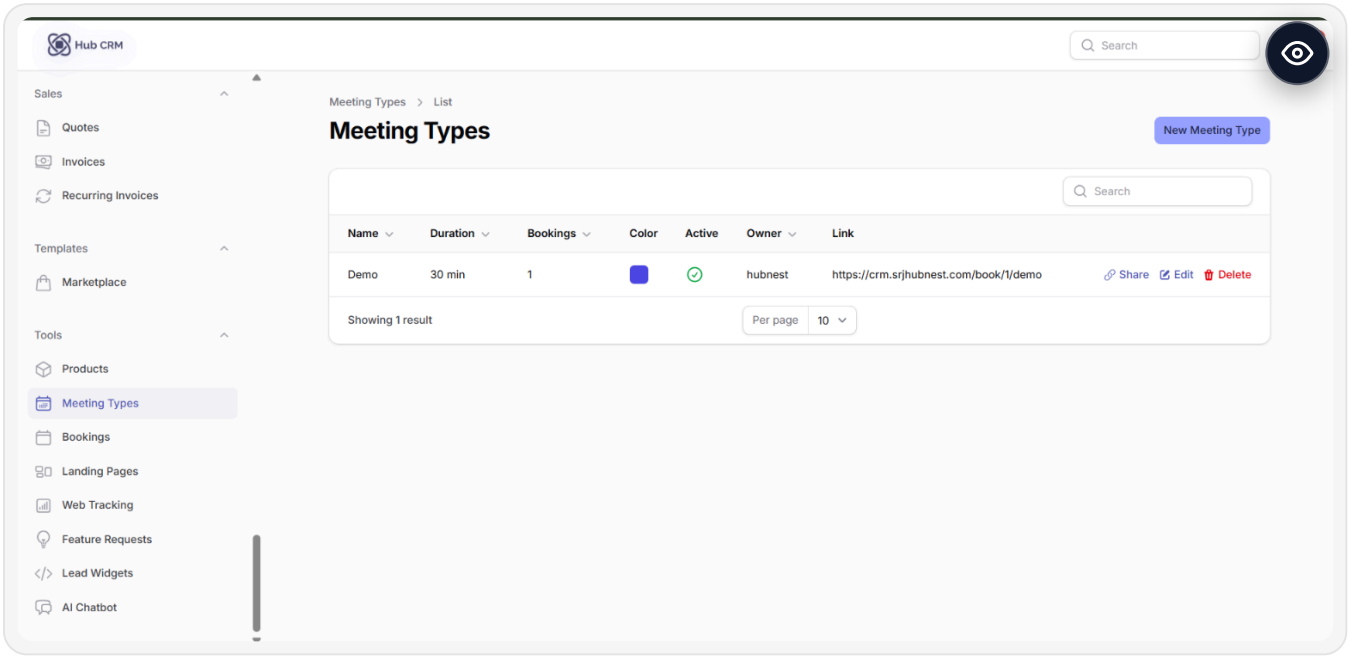

2. Set your availability

Settings → **Meeting Availability**: tick the days and hours you take meetings. **Preset: weekdays** fills Monday to Friday in one click. Click **Save**.

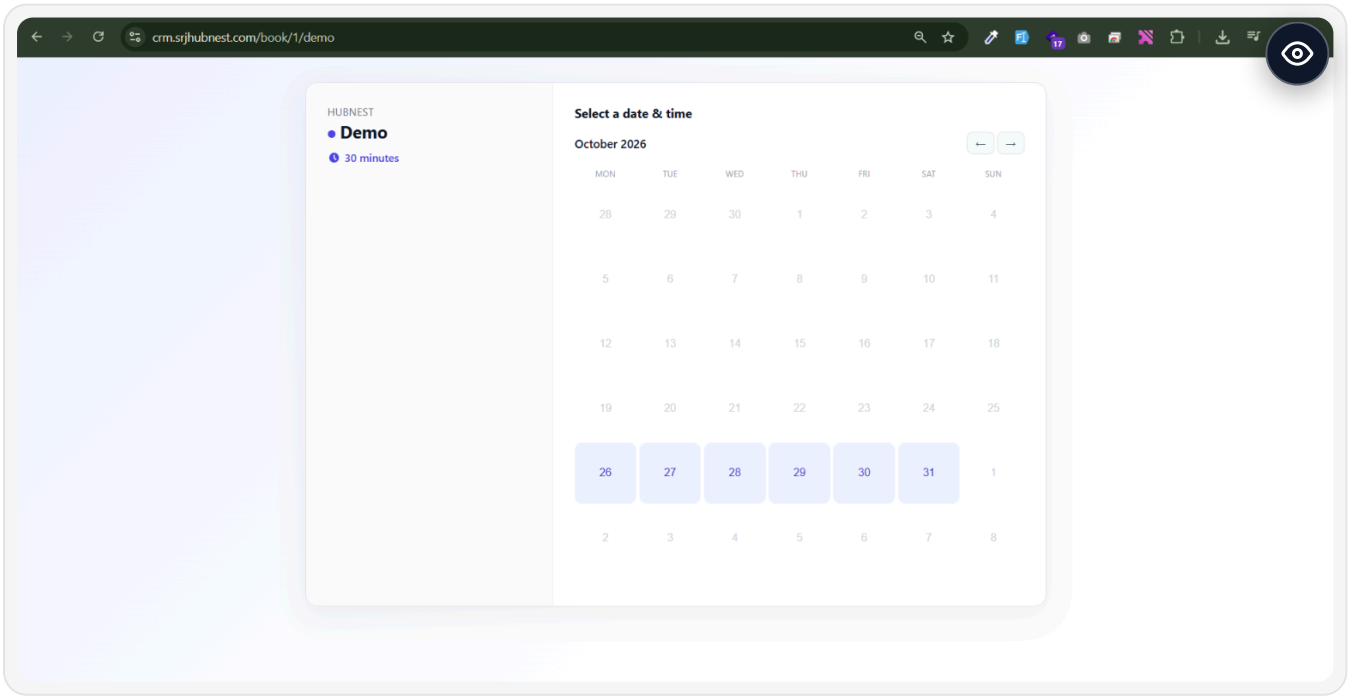

3. Create a meeting type

Tools → **Meeting Types** → **New**: **Name**, **Duration**, buffer times, location (video link, phone or in person), description and questions to ask. Click **Get link** to copy the public booking link and share it by email, WhatsApp or your website.

4. Manage bookings

Tools → **Bookings** lists upcoming and past bookings. Use **Mark completed**, **Mark no-show** or **Cancel**. Each booking creates or updates the lead and appears on the timeline.

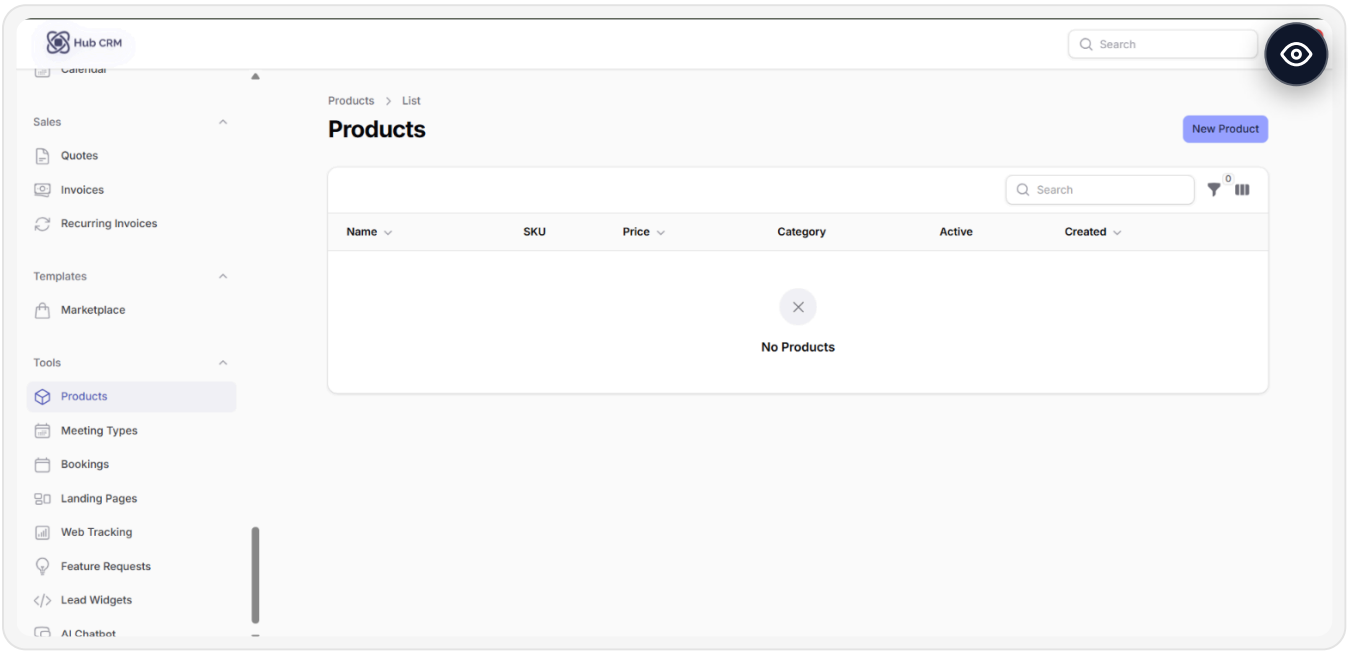

Tip

Each team member has a personal meeting link - see **Team Members** → **Meeting link** (admins) or your **My Profile**.

Products, Quotes and Invoices

Products

Tools → Products → New: **Name**, **SKU**, **Category**, **Description**, **Price**, **Currency**, **Active**. Products are picked when you build quotes and invoices.

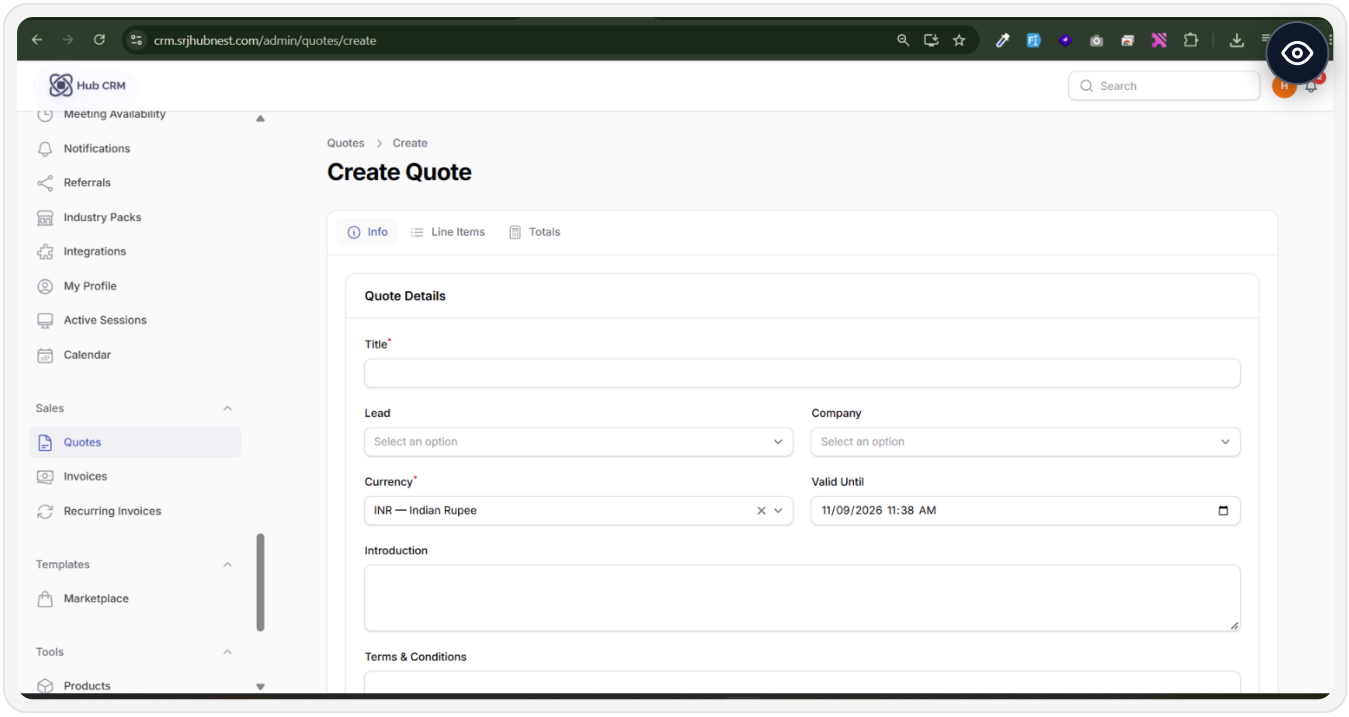

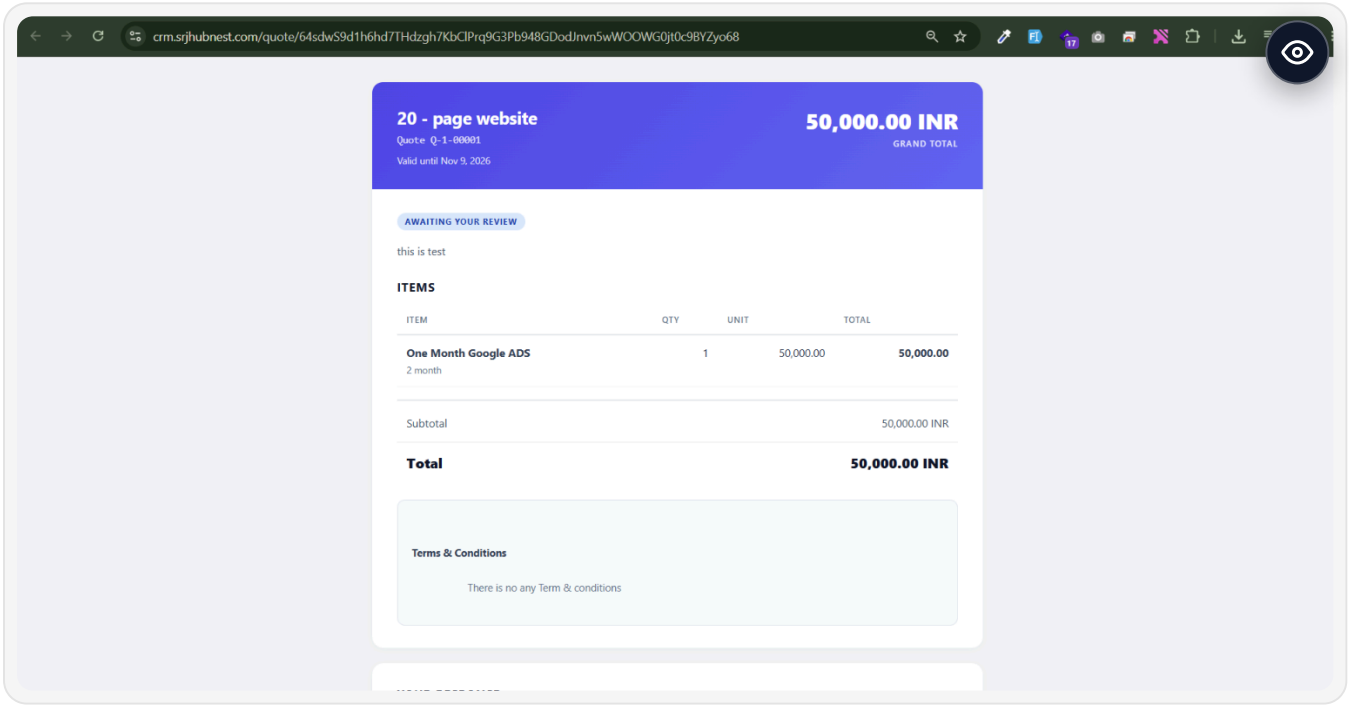

Quotes

Sales → Quotes → New Quote

1. **Info** tab: **Title**, **Lead**, **Company**, **Currency**, **Valid Until**, **Introduction**, **Terms & Conditions**.
2. **Line Items** tab: **Add Item**, pick a **Product** (name and unit price fill in), set **quantity** and **Discount %**.
3. **Totals** tab: **Subtotal**, **Tax Rate**, **Additional Discount** and the **Total** calculate automatically.
4. Save, then use the actions:

Action	What it does
Send	Emails the lead a link to view, sign and accept the quote
Send for Signature	Sends the e-signature link
Preview / Public link	See what the customer sees
Download PDF	PDF copy
Duplicate	Copy as a starting point
Convert to Invoice	Creates an invoice with the same items
Cancel	Cancels the quote

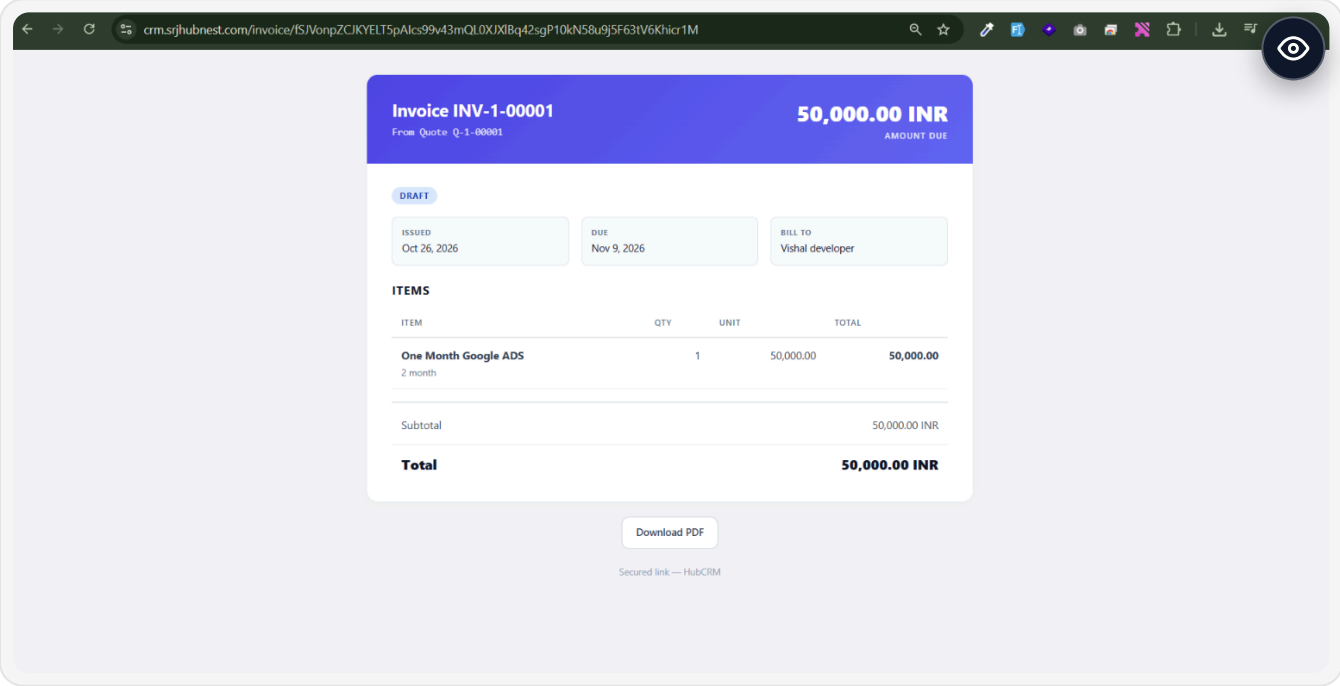

Invoices

Sales → **Invoices**: create directly or from a quote. Same Info / Line Items / Totals tabs, plus **Issued** and **Due Date**.

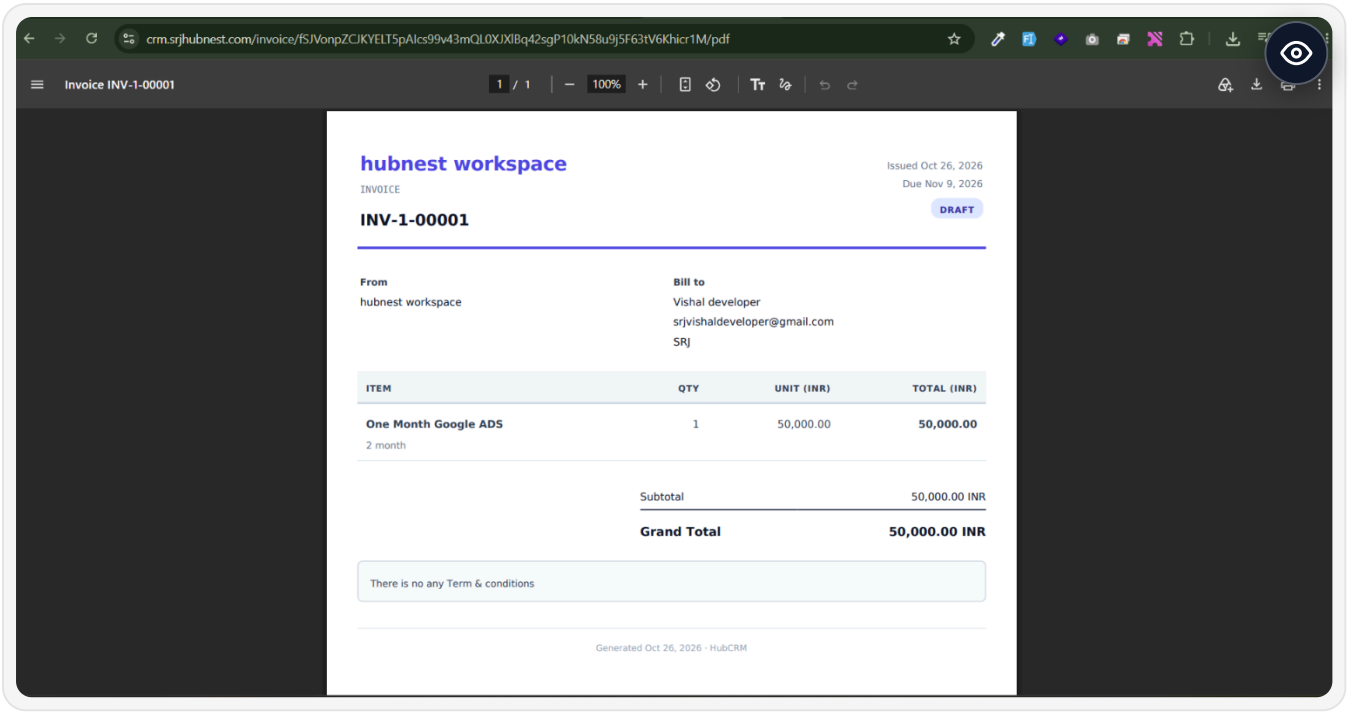

Action	Use it to
Send / Mark as Sent	Email the invoice, or just mark it sent if you delivered it elsewhere
Record Payment	Add a payment (amount, method, received date, reference)
Mark as Paid	Close an invoice paid in full
Refund	Record a refund in the ledger (does **not** refund through the payment gateway for you)
Download PDF, **Public link**	Share with the customer
Cancel	Void the invoice

The **Payments** tab on an invoice lists every payment received.

Recurring Invoices

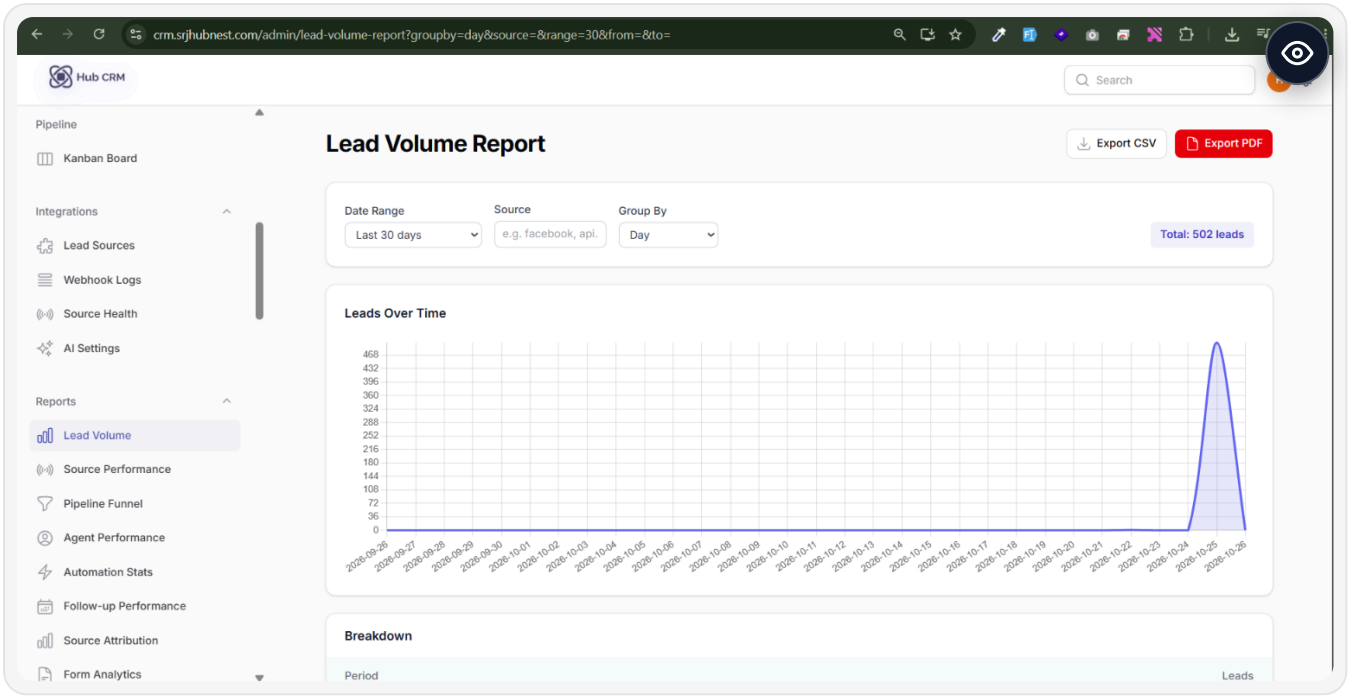

Sales → **Recurring Invoices** → **New**: for a standing monthly or yearly charge. Choose the **Member / Customer**, **Description**, **Amount**, **Bills every** (month/year), **Billing day**, **Next run date** and **Due after (days)**. HubCRM creates a real invoice on each run date; **Auto-send each invoice** marks them Sent instead of Draft.

Reports and Audit Log

All reports are under the **Reports** group. Most have date filters and **Export CSV** / **Export PDF** buttons.

Report	Answers
Agent Performance	Leads handled, contacted, converted and revenue per agent
Lead Volume	How many leads arrive per day / week / month
Source Performance	Which sources produce leads that convert
Source Attribution	UTM source / medium / campaign contribution
Pipeline Funnel	Stage-to-stage conversion
Pipeline Bottlenecks	Where deals wait longest
Response Time	How fast agents first respond to new leads
Follow-up Performance	Completed, missed and on-time follow-ups per agent
Revenue by Rep	Won revenue per sales rep
Automation Stats	Runs, success rate, top automations
Email Sequences	Sent, opened, replied per sequence
Form Analytics	Views, submissions and conversion per form
Lead Field Breakdown	Distribution of leads by any custom field (dropdown, tags and so on)
Lead Source Health (Integrations)	Connected sources that stopped delivering

Follow-up Performance report

A date-range picker at the top, then a table with one row per agent: **Scheduled, Completed, Missed, Overdue (right now)** and an **On-time rate** percentage, colour-coded (green ≥ 80%, amber 50-79%, red below 50%). Below the table, a bar chart breaks down follow-ups by **type** (Call, WhatsApp, SMS, Email, Demo, Meeting, Other) so you can see which channels your team actually uses. **Export CSV** downloads the table as shown.

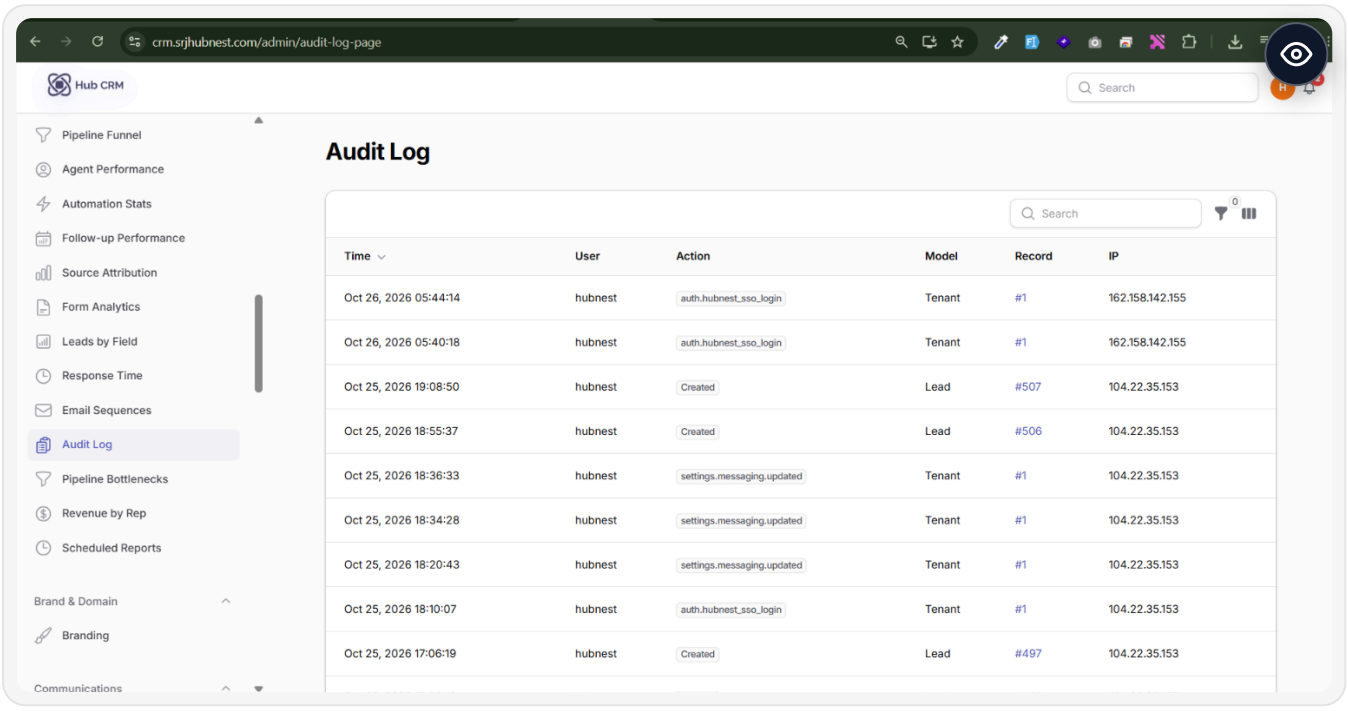

Scheduled reports

Reports → **Scheduled Reports** → **New**: choose the report, frequency (daily, weekly, monthly), recipients and format. HubCRM emails it automatically.

Audit Log

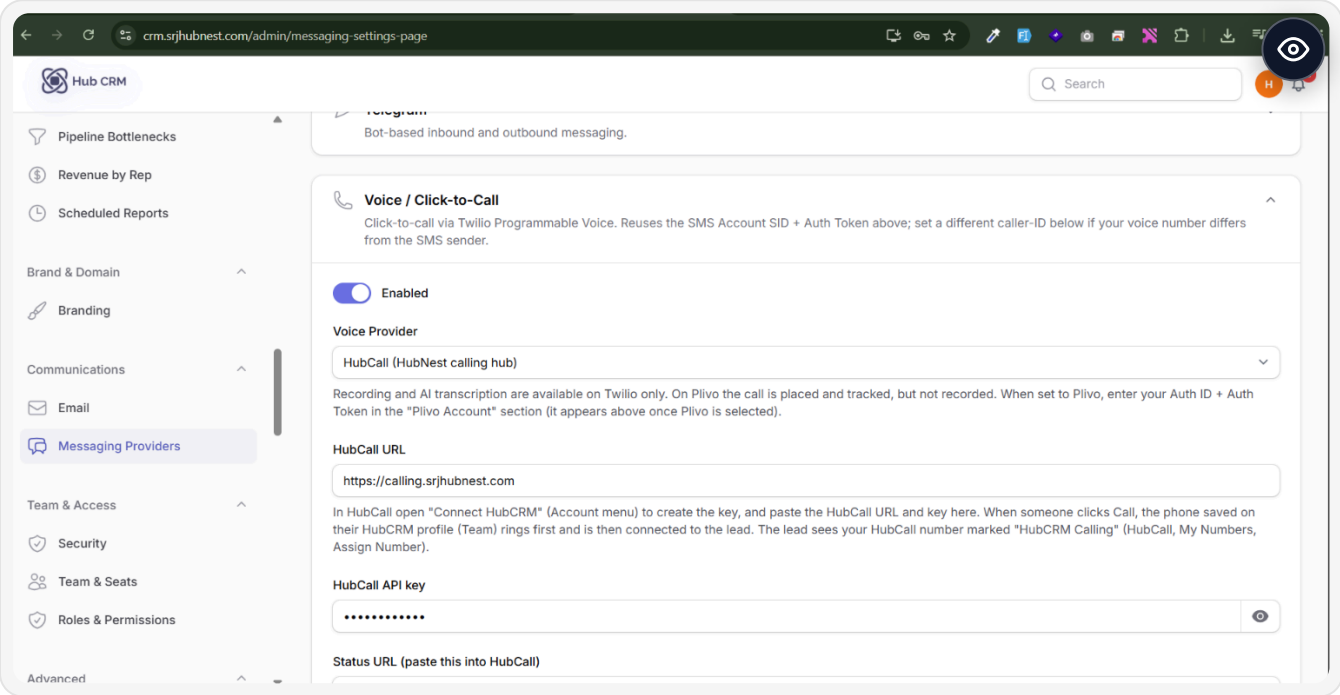

Reports → **Audit Log** records who did what and when: logins, lead and field changes, bulk actions, exports, settings and permission changes. Filter by user, action and date.

Integrations, API Keys and Webhooks

Connect HubCall (calling)

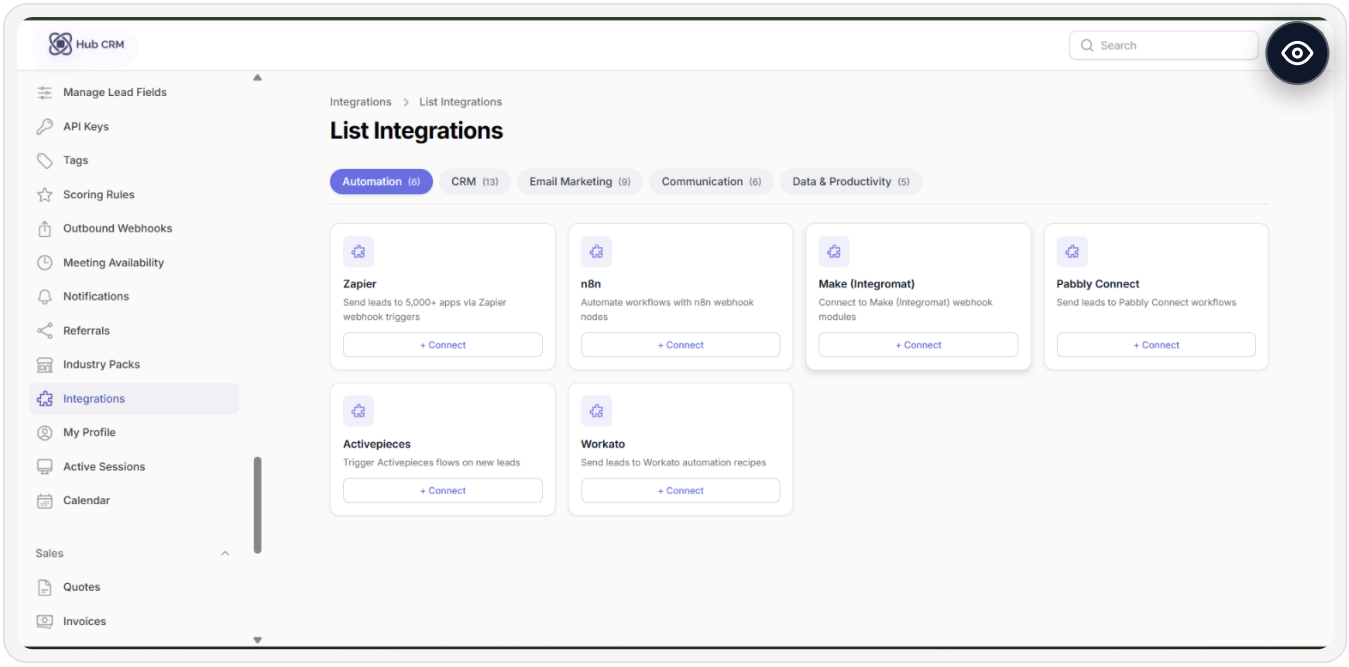

1. In **HubCall**, open **Connect HubCRM** (sidebar) and follow the steps to link your workspace.
2. In HubCall's number settings, set a number's use to **HubCRM Calling**.
3. In HubCRM, each rep saves their own phone in **My Profile**, then uses **Call** on leads. See Calls, WhatsApp and SMS.

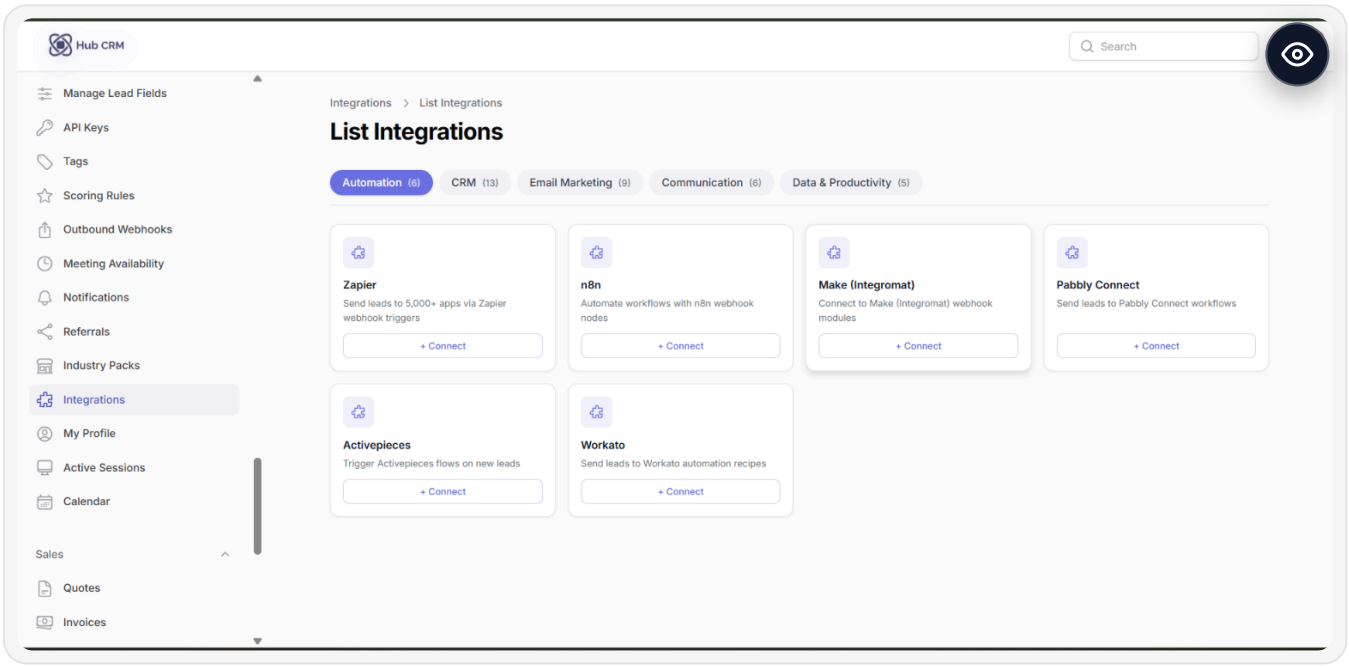

Settings → Integrations

Settings → **Integrations** → **New**: push leads and events to other tools. Choose the app, enter its credentials, click **Test**, then **Enable**. Open **Sync logs** to see every delivery and any error.

Available connectors include HubSpot, Salesforce, Zoho CRM, Pipedrive, Freshsales, Zendesk, Close, Copper, Monday, Airtable, Notion, Google Sheets, Mailchimp, Brevo, ActiveCampaign, Klaviyo, ConvertKit, MailerLite, Slack, Microsoft Teams, Twilio, Zapier, Make, n8n, Pabbly, Workato and generic Webhook / REST API push.

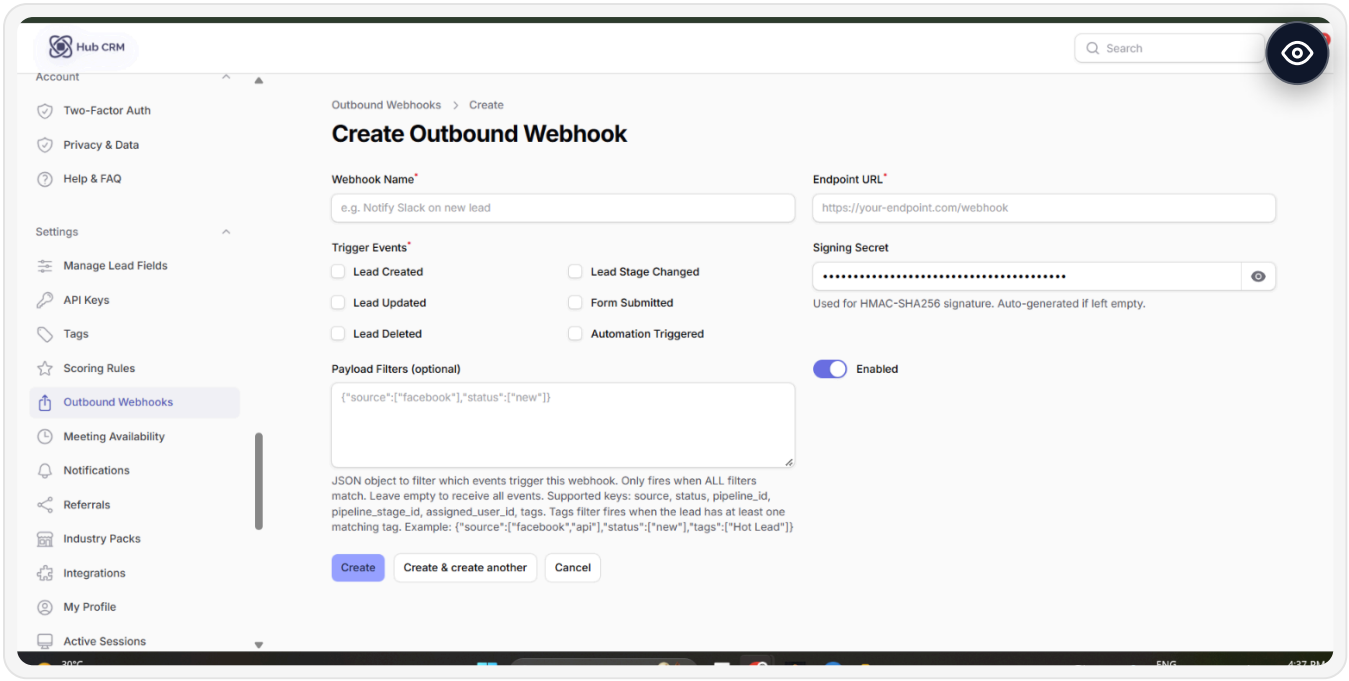

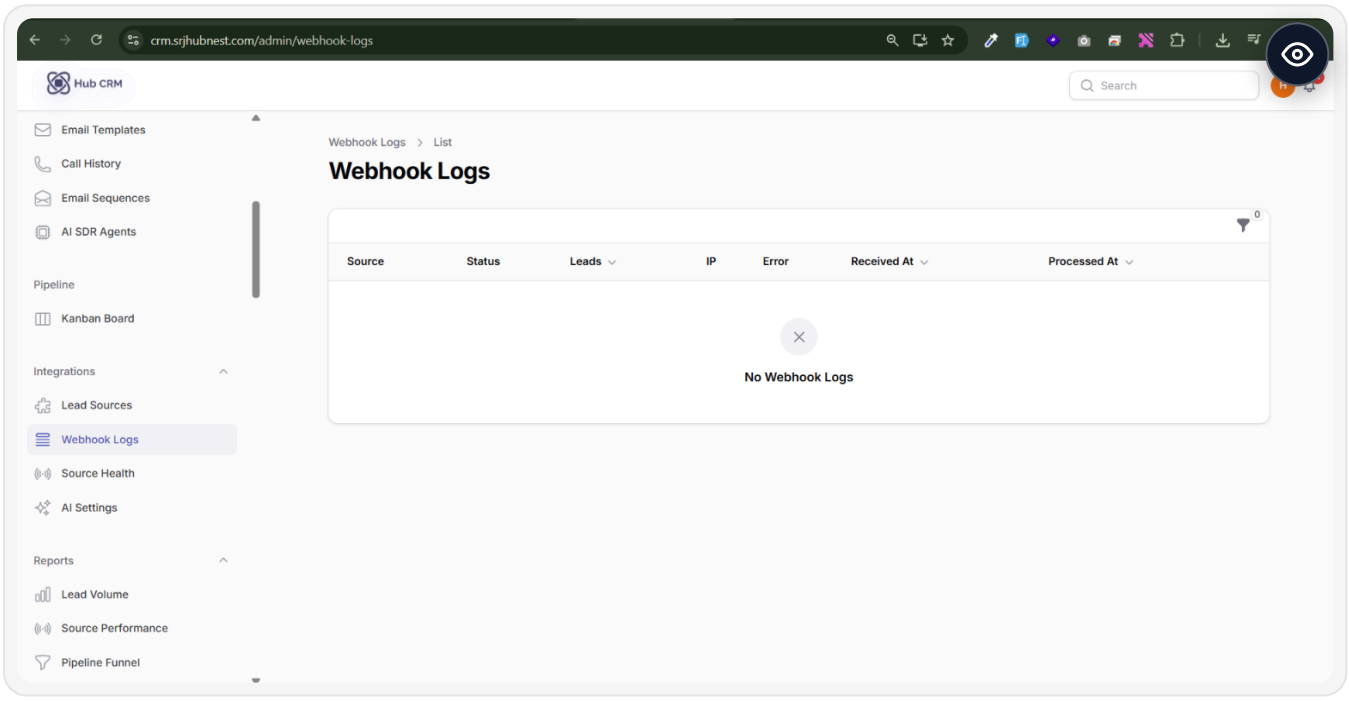

Outbound Webhooks

Settings → **Outbound Webhooks** → **New**: send an HTTPS request to your URL when events happen (lead created, status changed, and so on). Set the URL, events and an optional secret so your server can verify the signature. Use **Test** to send a sample and **Deliveries** to see responses.

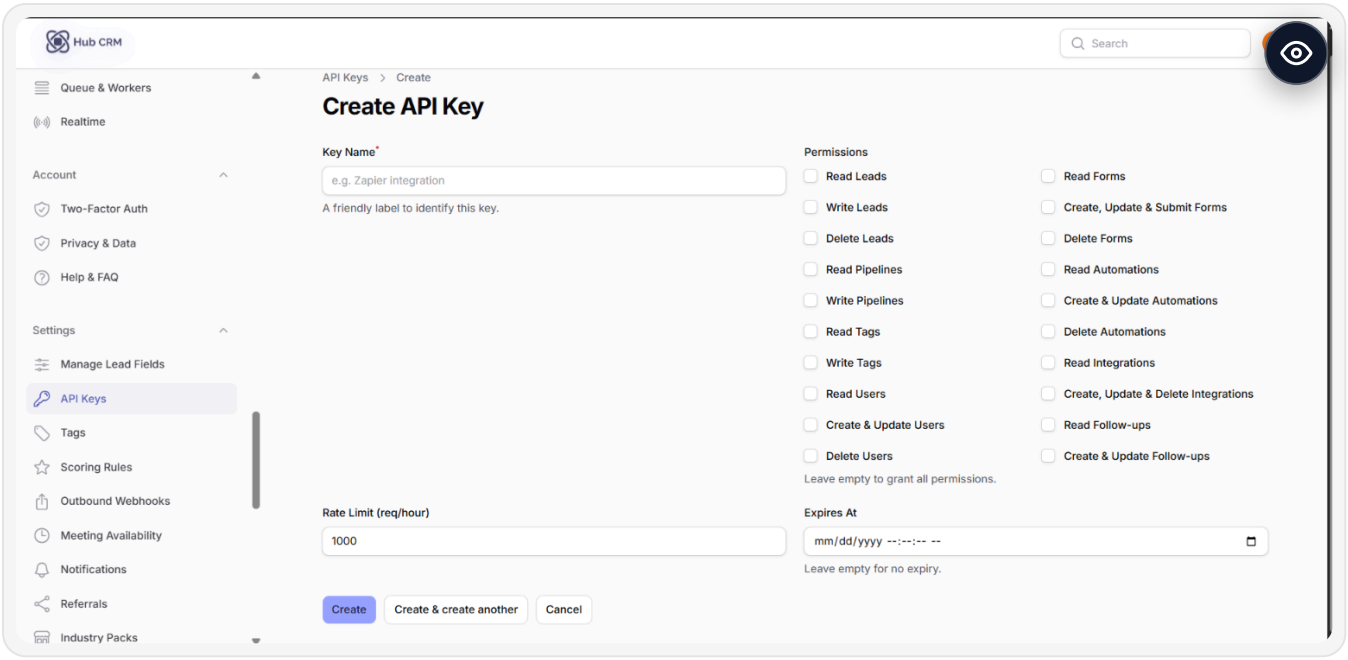

Integrations → **Webhook Logs** lists every delivery; click **Retry** on failures.

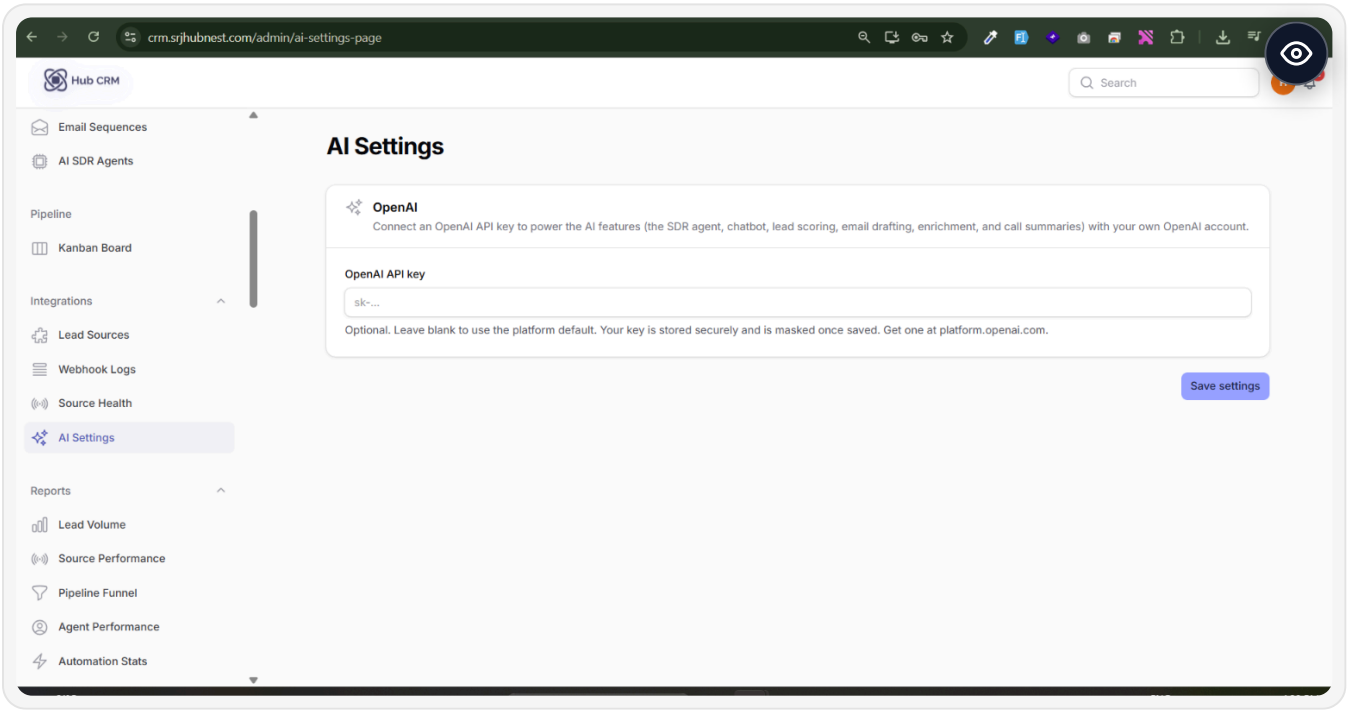

API Keys

Settings → **API Keys** → **New**: create a key to call the HubCRM API from your own systems. The key is shown **once** - copy it immediately. **Revoke** a key to disable it at once.

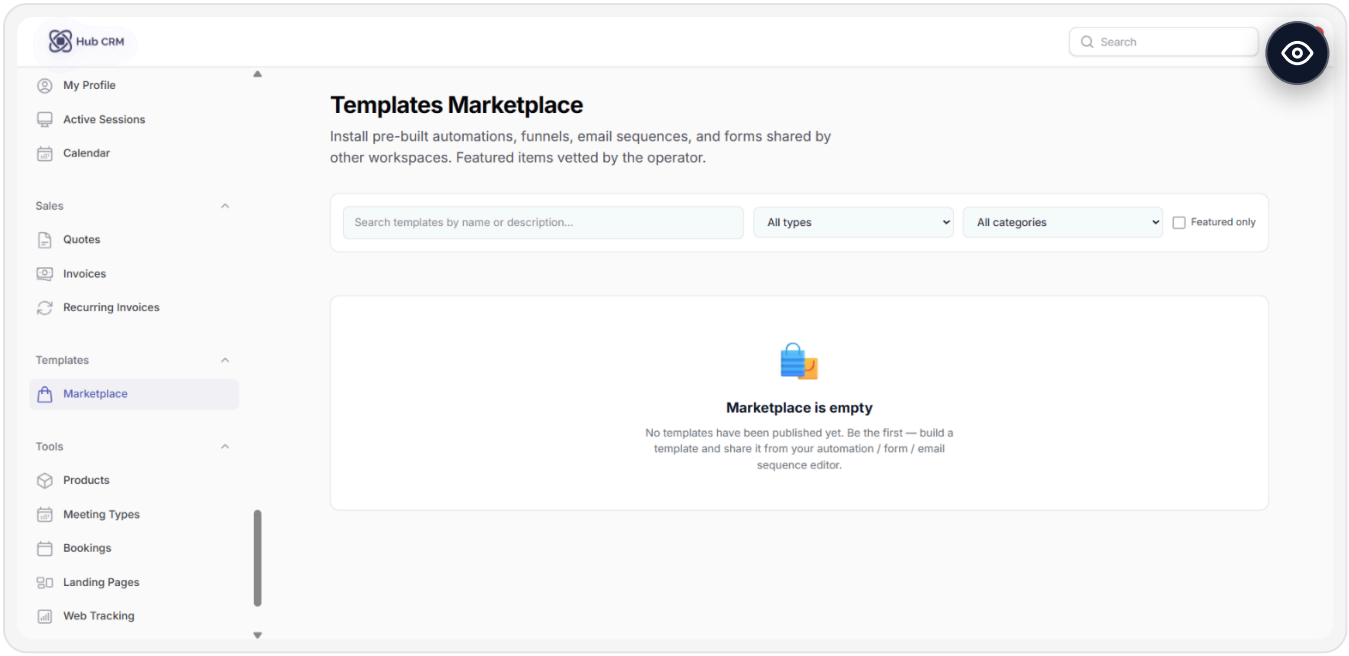

AI Settings

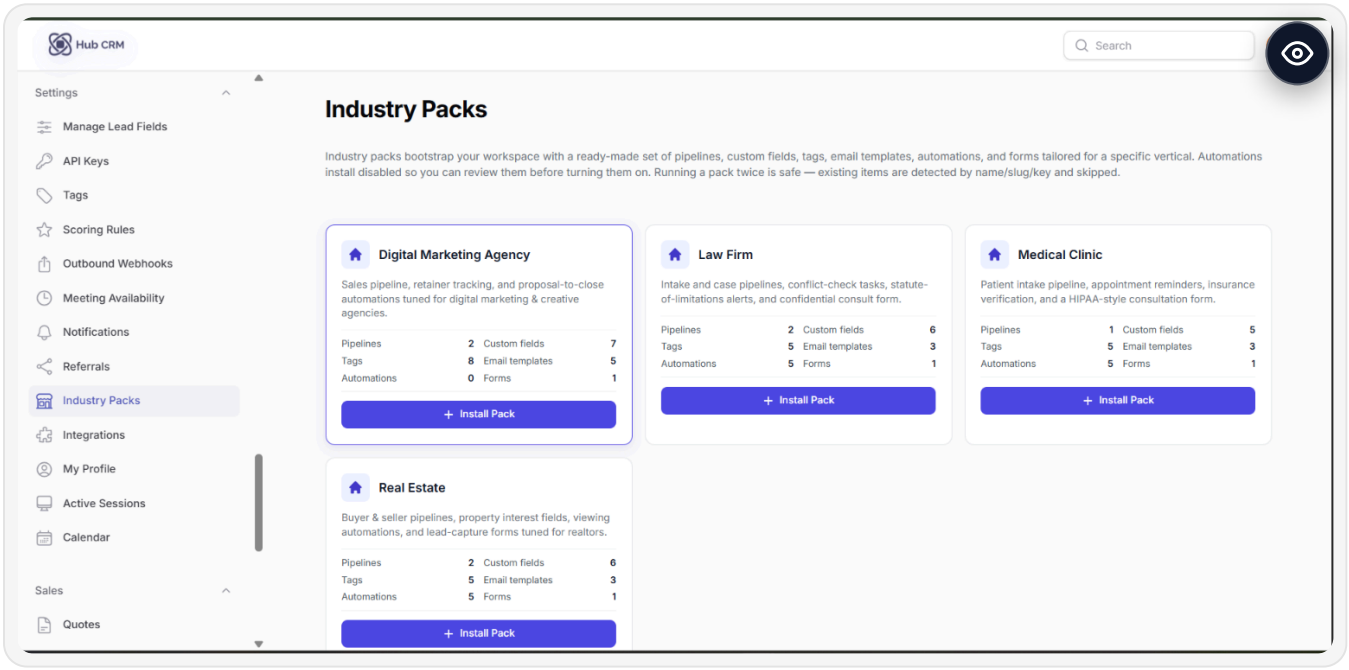

Integrations → **AI Settings**: add your AI provider key (or use the workspace default if provided). It powers the AI SDR, chatbot and email drafting.

Marketplace and Industry Packs

- **Templates** → **Marketplace**: install ready-made automations, forms, sequences and templates shared by HubNest.
- **Settings** → **Industry Packs**: one click installs a full starter set (pipeline, custom fields, templates, automations) for your industry.

Industry Packs
Industry packs bootstrap your workspace with a ready-made set of pipelines, custom fields, tags, email templates, automations, and forms tailored for a specific vertical. Automations install disabled so you can review them before turning them on. Running a pack twice is safe — existing items are detected by name/slug/key and skipped.
Digital Marketing Agency
Sales pipeline, retainer tracking, and proposal-to-close automations tuned for digital marketing & creative agencies.
Pipelines 2 Custom fields 7
Tags 8 Email templates 5
Automations 0 Forms 1

Settings

Companies

Leads → Companies: accounts that group contacts. Each company has **Name, Domain, Website, Phone, Industry, Size, Address, Account Owner**, a **Contacts** tab, **Deal summary** (open pipeline, won deals) and **Notes**. Import companies in bulk from **Company Imports**.

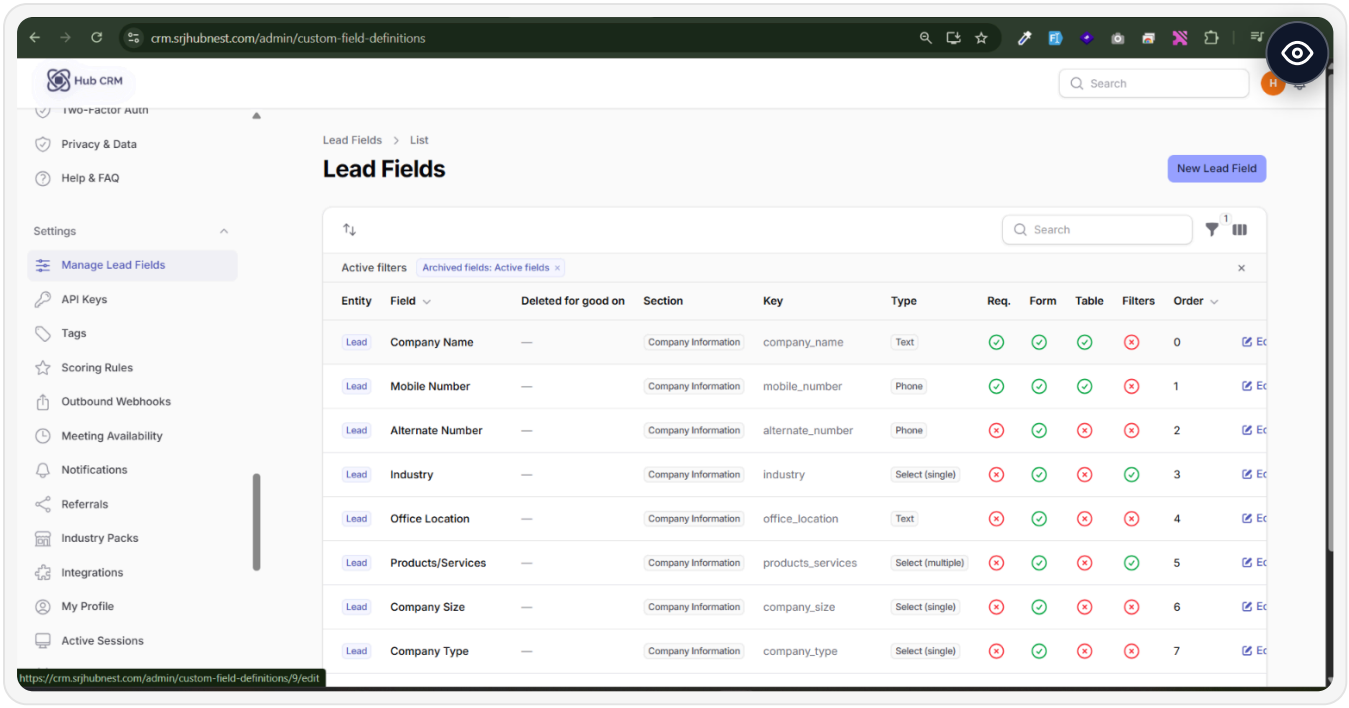

> **The company detail page**
>
> The top banner shows the company name, domain and a logo placeholder (auto-filled from the domain's favicon when available), with **Edit** and **Add Contact** buttons on the right. Below it, tabs run across the page: **Contacts (with a count badge)**, **Deal Summary**, and **Notes**. The Contacts tab is a table of every lead linked to this company with their role, email and status. Deal Summary shows the company's open pipeline value as a bar and a list of won deals with amounts. Notes is a simple internal note thread, newest first.

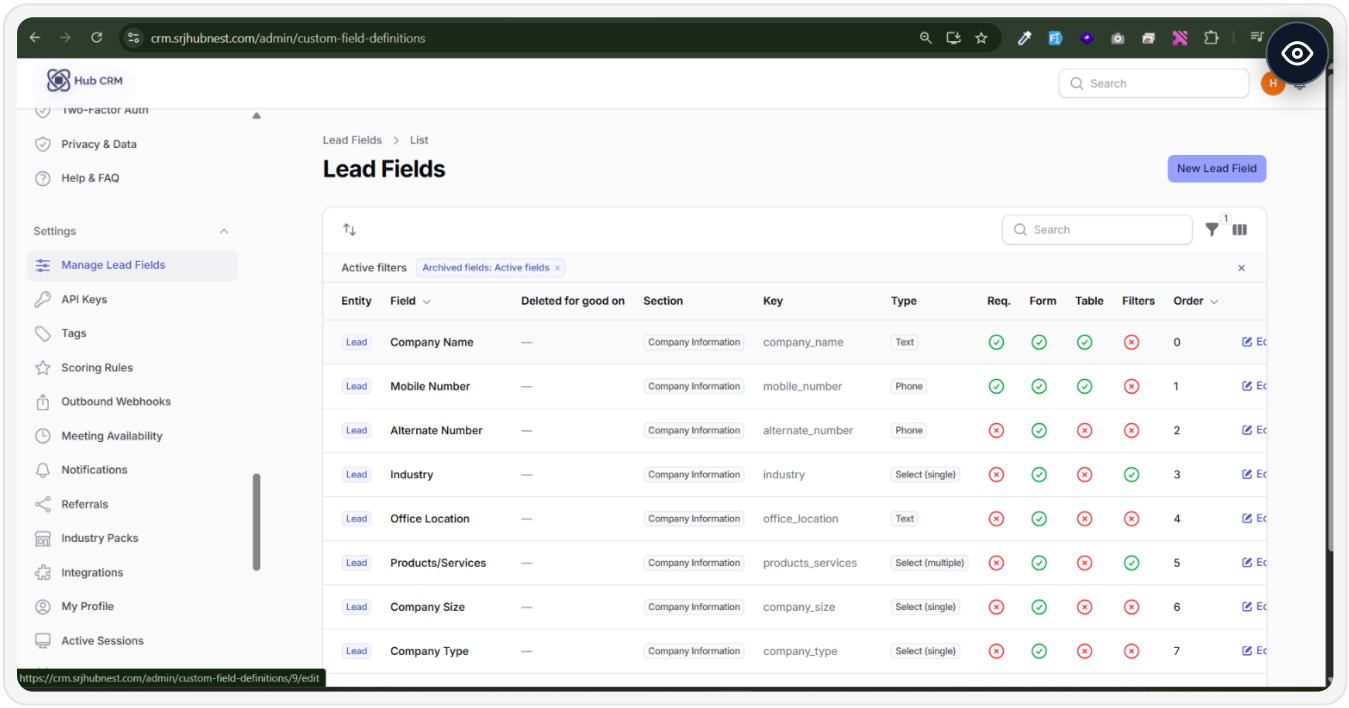

Manage Lead Fields (custom fields)

Settings → Manage Lead Fields → New: add your own fields to leads or companies.

Option	Meaning
Applies to	Lead or Company
Field label / Key	What people see / the system name (lowercase, numbers, underscores)
Field type	Text, number, date, dropdown, multi-select, and others
Options	Choices for dropdown fields
Required, Default value	Force an answer; pre-fill new leads (dates accept `@today`, users `@current_user`)
Show in form / table / filters	Where it appears
Searchable, Use in reports, Bulk editable, In import, In export	How it can be used
Visible to roles / Editable by roles	Restrict who can see or change it. Empty = everyone; admins always can

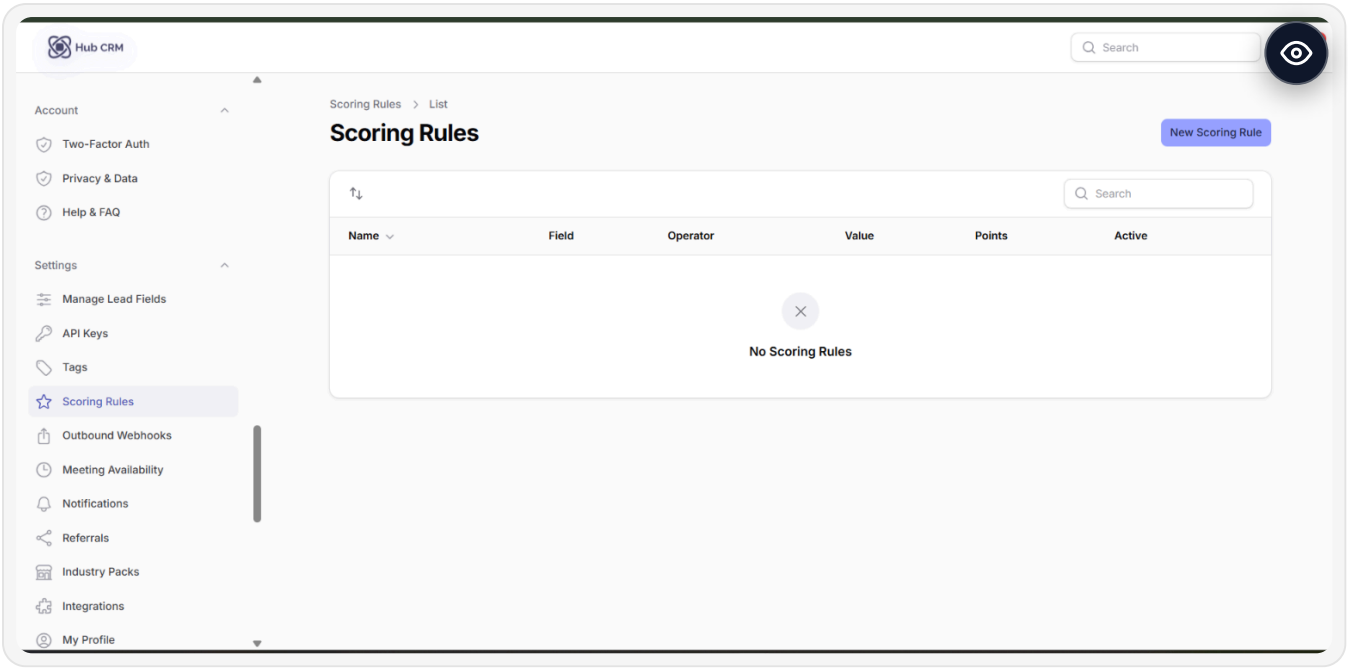

Archive a field to hide it without losing data; **Restore** brings it back.

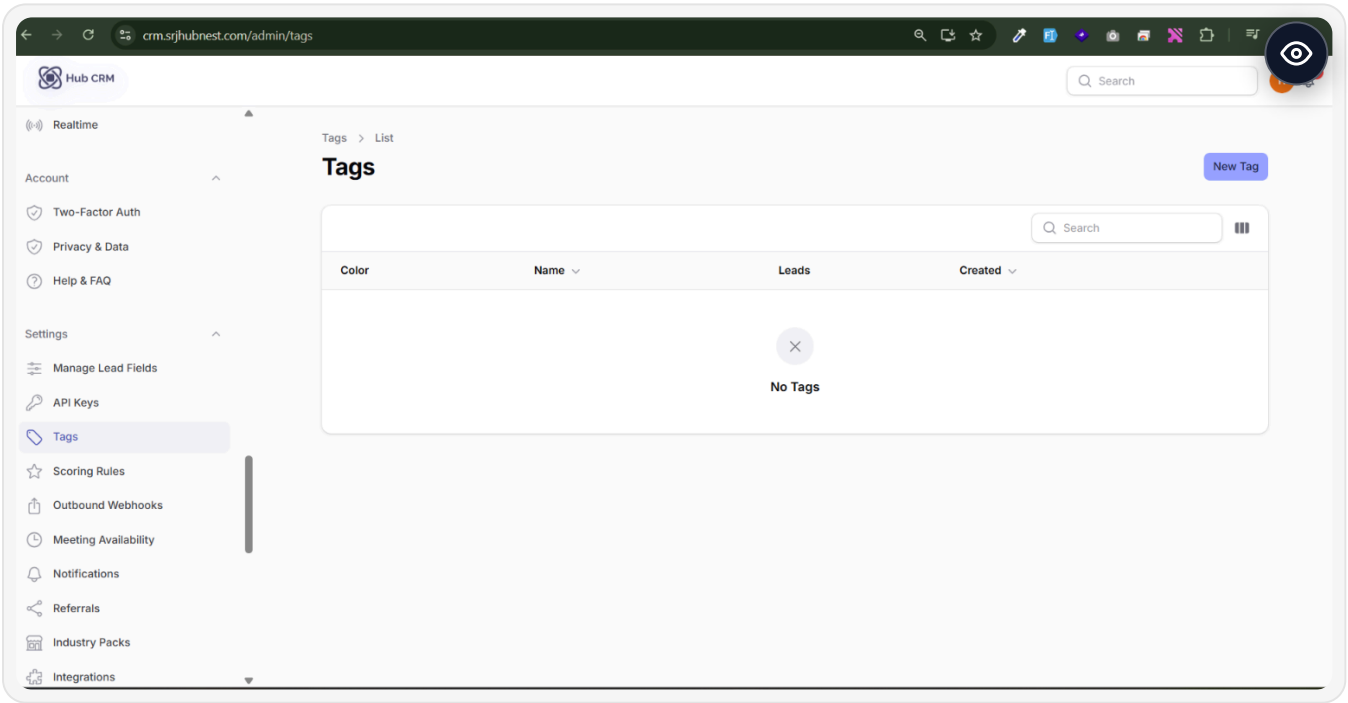

Lead scoring rules

Settings → **Scoring Rules** → **New**: add or subtract points automatically. Choose a **Field** (Email, Phone, Source, Status, names), an **Operator** (equals, contains, is present, greater than...), a **Value** and **Points** (negative subtracts). The total score shows on each lead and can trigger automations.

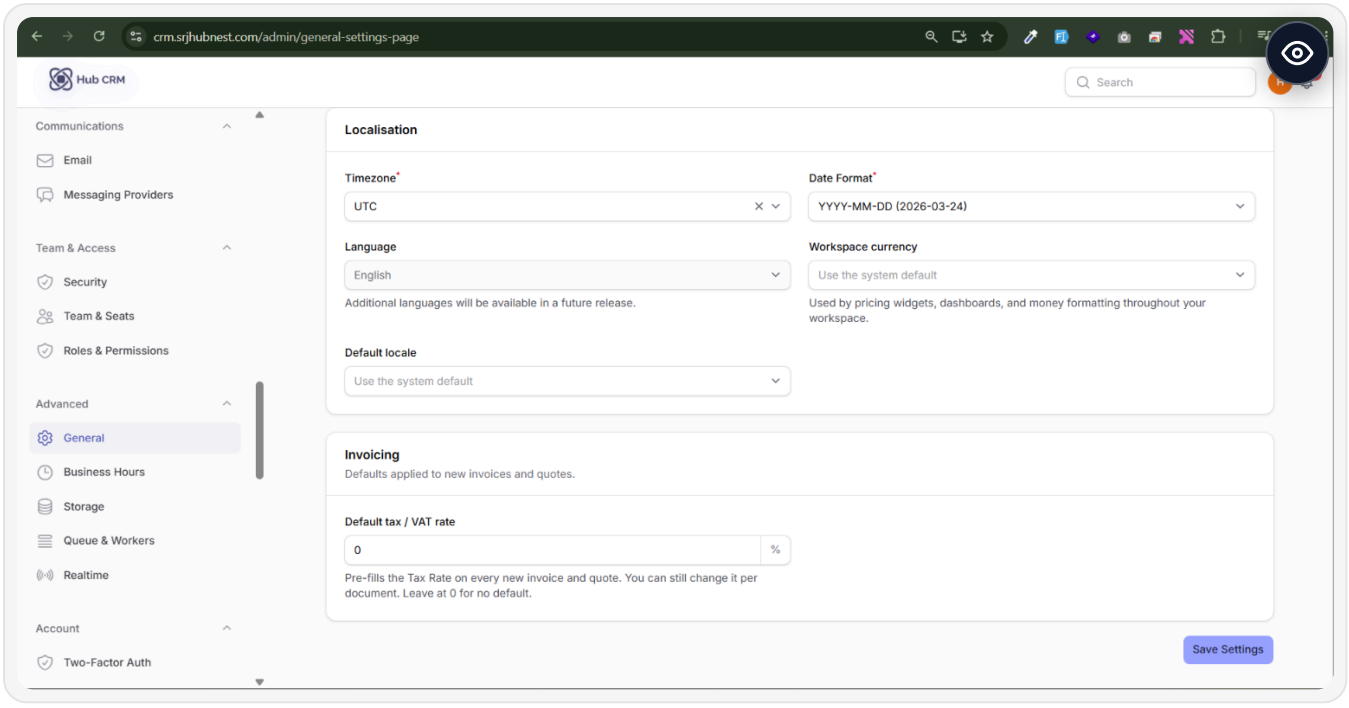

Tags

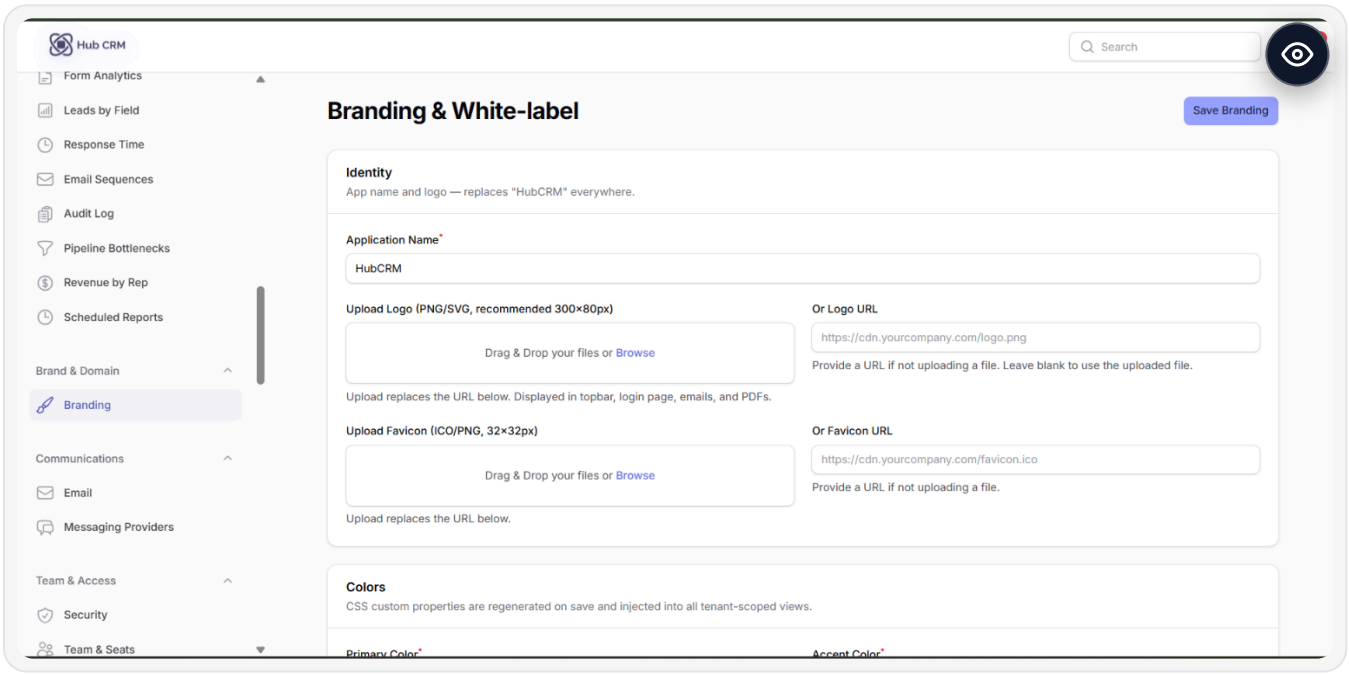

Settings → **Tags**: create coloured tags to label leads, then filter or bulk-tag by them.

Workspace options

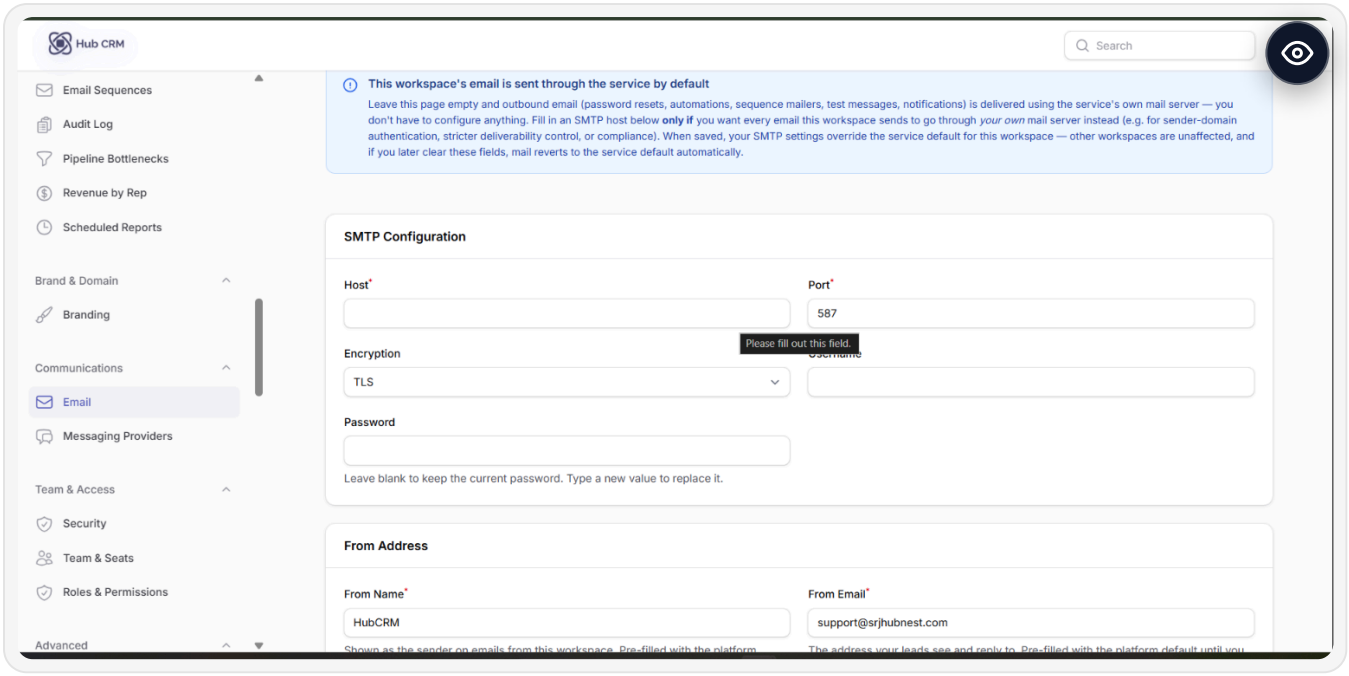

Page	What you set
Advanced → General	Workspace name, timezone, currency, date format, default behaviours
Brand & Domain → Branding	Logo, colours and white-label look of the workspace and login page
Brand & Domain → Custom Domain	Use your own domain; add the DNS record shown, then **Retry verification**
Communications → Email	SMTP server, from name/address; **Send test** to check
Communications → Messaging Providers	WhatsApp Business Cloud API, SMS and HubNotification settings; **Test configuration**
Advanced → Business Hours	Working hours used by automations that *respect business hours*
Advanced → Storage	Where uploaded files are kept; **Test storage**
Advanced → Realtime	Live updates and broadcasting
Advanced → Queue & Workers	Health of background jobs (imports, emails, automations)

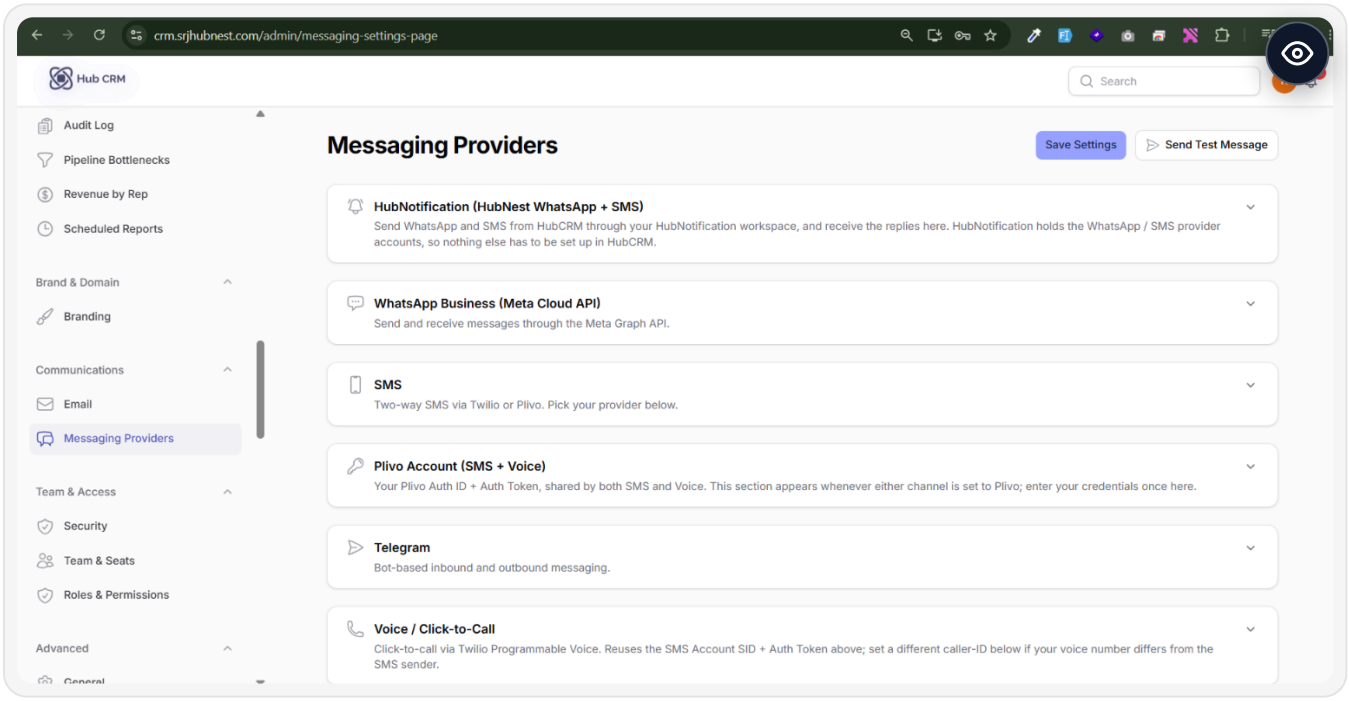

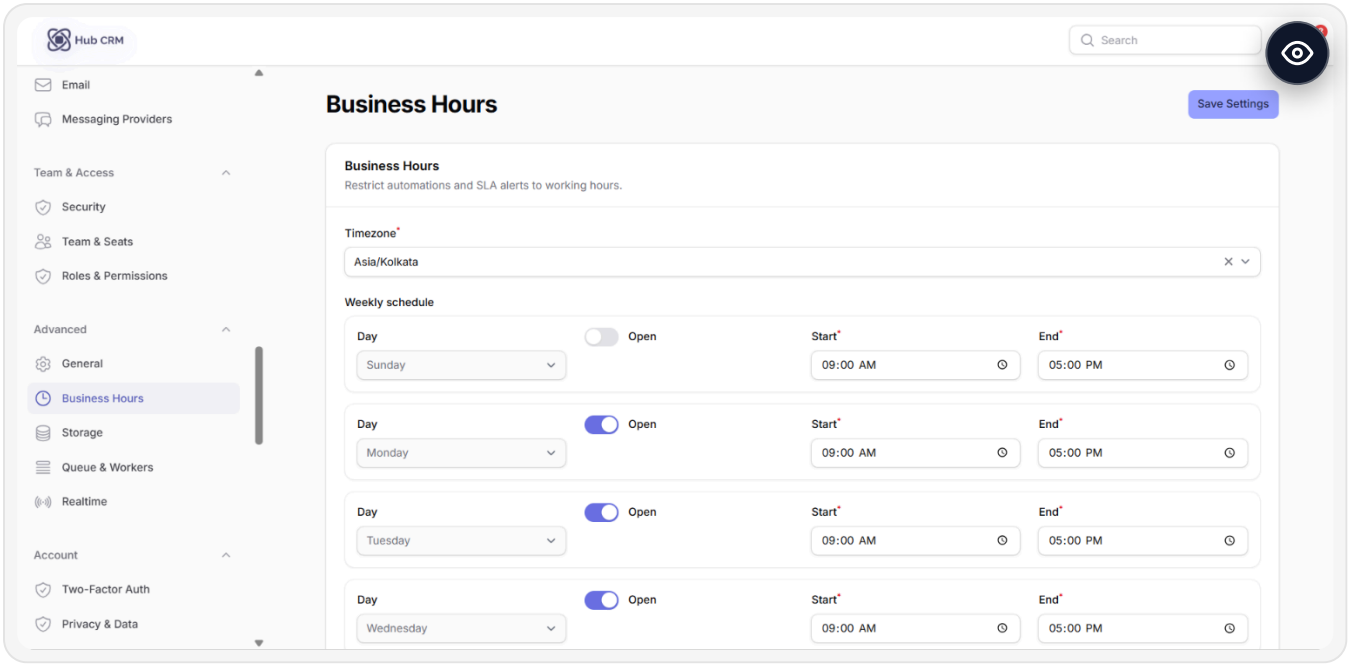

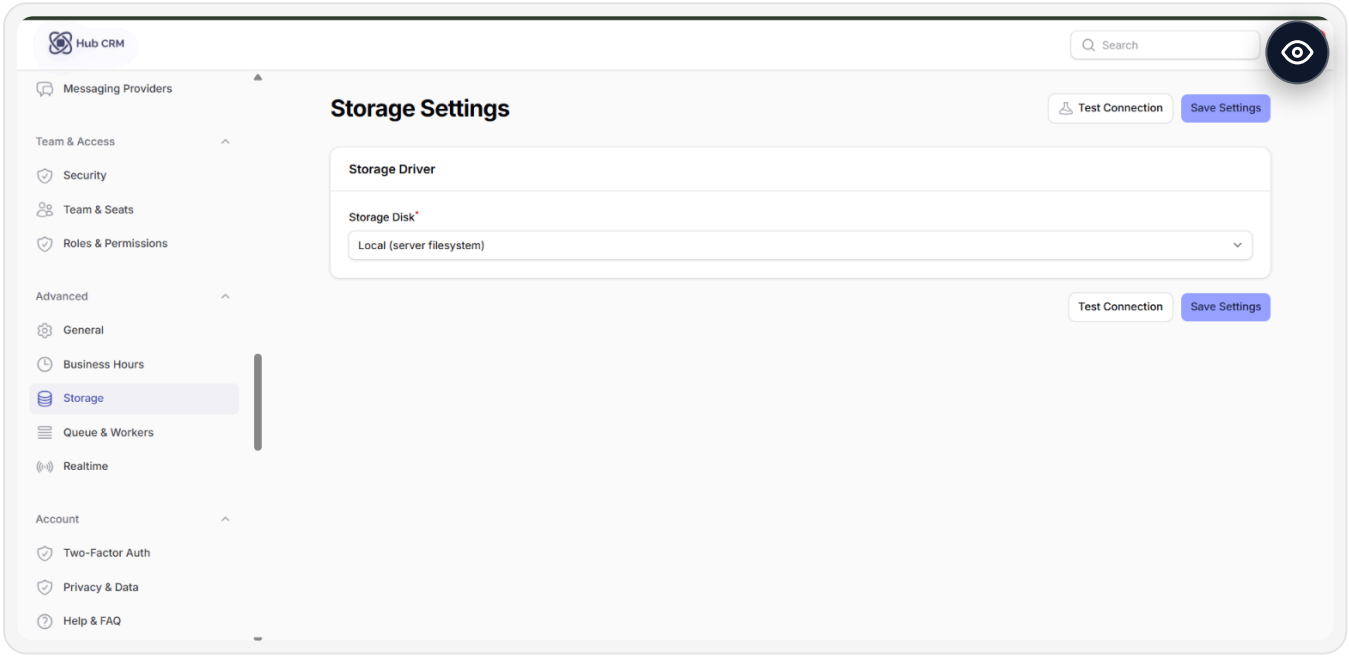

Custom Domain screen

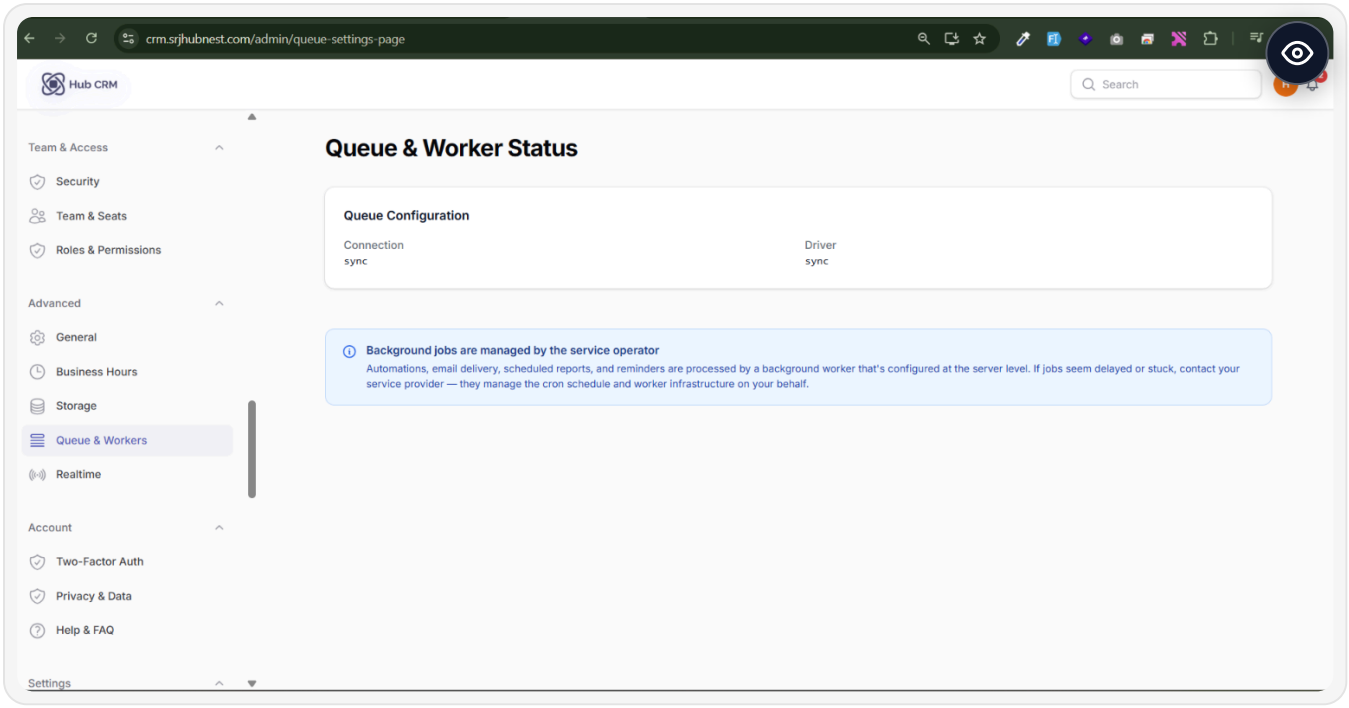

A single-field form: enter the domain you own (e.g. `crm.yourcompany.com`) and click **Add Domain**. HubCRM then shows the exact **DNS record** to create at your domain registrar - a CNAME record with its name and target value, shown with a copy-to-clipboard icon next to each. A status badge (**Pending verification** in amber, **Verified** in green) sits below, with a **Retry verification** button to re-check after you've added the DNS record. Once verified, HubCRM also provisions an SSL certificate automatically and the badge changes to **Active**.

This workspace's email is sent through the service by default
Leave this page empty and outbound email (password resets, automations, sequence mailers, test messages, notifications) is delivered using the service's own mail server — you don't have to configure anything. Fill in an SMTP host below only if you want every email this workspace sends to go through your own mail server instead (e.g. for sender-domain authentication, stricter deliverability control, or compliance). When saved, your SMTP settings override the service default for this workspace — other workspaces are unaffected, and if you later clear these fields, mail reverts to the service default automatically.

Send Test Message
HubNotification (HubNest WhatsApp + SMS)
Send WhatsApp and SMS from HubCRM through your HubNotification workspace, and receive the replies here. HubNotification holds the WhatsApp / SMS provider accounts, so nothing else has to be set up in HubCRM.
WhatsApp Business (Meta Cloud API)
Send and receive messages through the Meta Graph API.
SMS
Two-way SMS via Twilio or Plivo. Pick your provider below.
Plivo Account (SMS + Voice)
Your Plivo Auth ID + Auth Token, shared by both SMS and Voice. This section appears whenever either channel is set to Plivo; enter your credentials once here.
Telegram
Bot-based inbound and outbound messaging.
Voice / Click-to-Call
Click-to-call via Twilio Programmable Voice. Reuses the SMS Account SID + Auth Token above; set a different caller-ID below if your voice number differs from the SMS sender.

Background jobs are managed by the service operator
Automations, email delivery, scheduled reports, and reminders are processed by a background worker that's configured at the server level. If jobs seem delayed or stuck, contact your service provider — they manage the cron schedule and worker infrastructure on your behalf.

Team, Roles and Security

Team & Seats

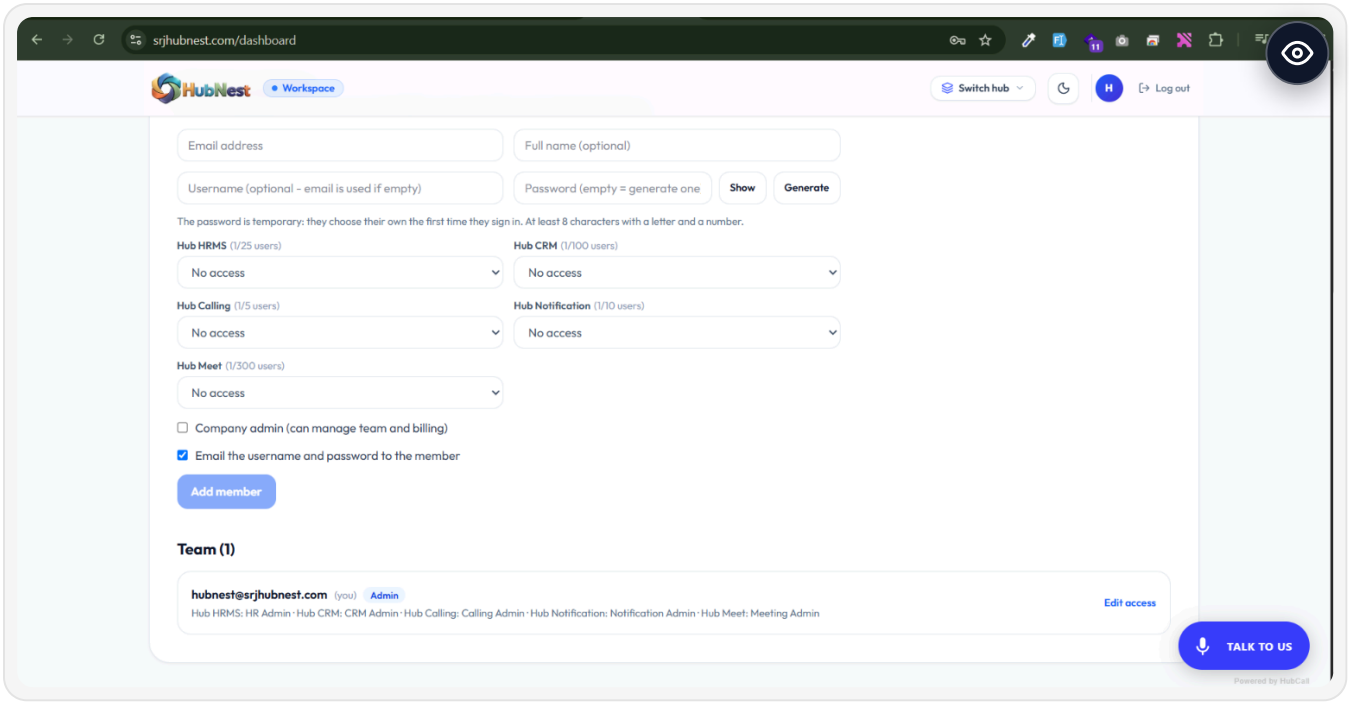

Team & Access → Team & Seats

- **Invite**: enter an email and role; the person receives an invitation.
- **Adjust seats**: add or remove paid seats.
- **Lead visibility**: choose whether agents see only their own leads or all leads.
- **Add members in HubNest**: opens HubNest to create full accounts for your organisation.

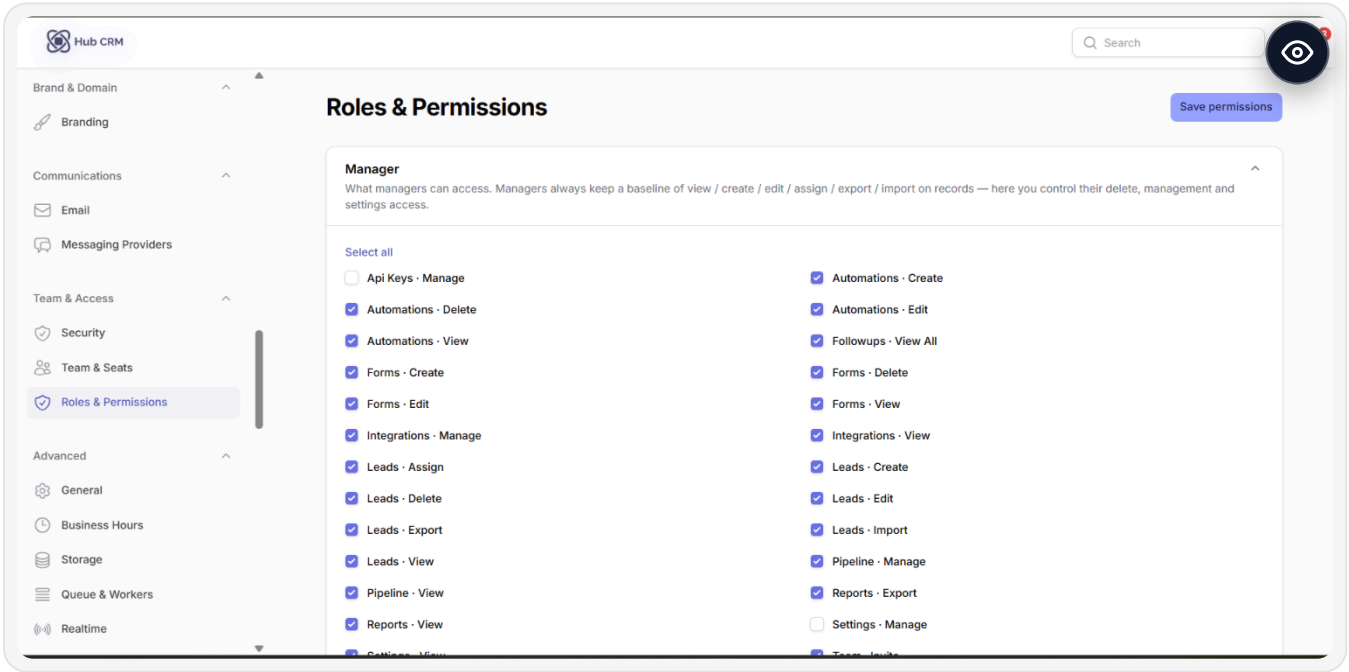

Team Members

Settings → Team Members lists everyone. Admins can **Reset password**, **Suspend / Unsuspend**, copy a member's **Meeting link** and change their role.

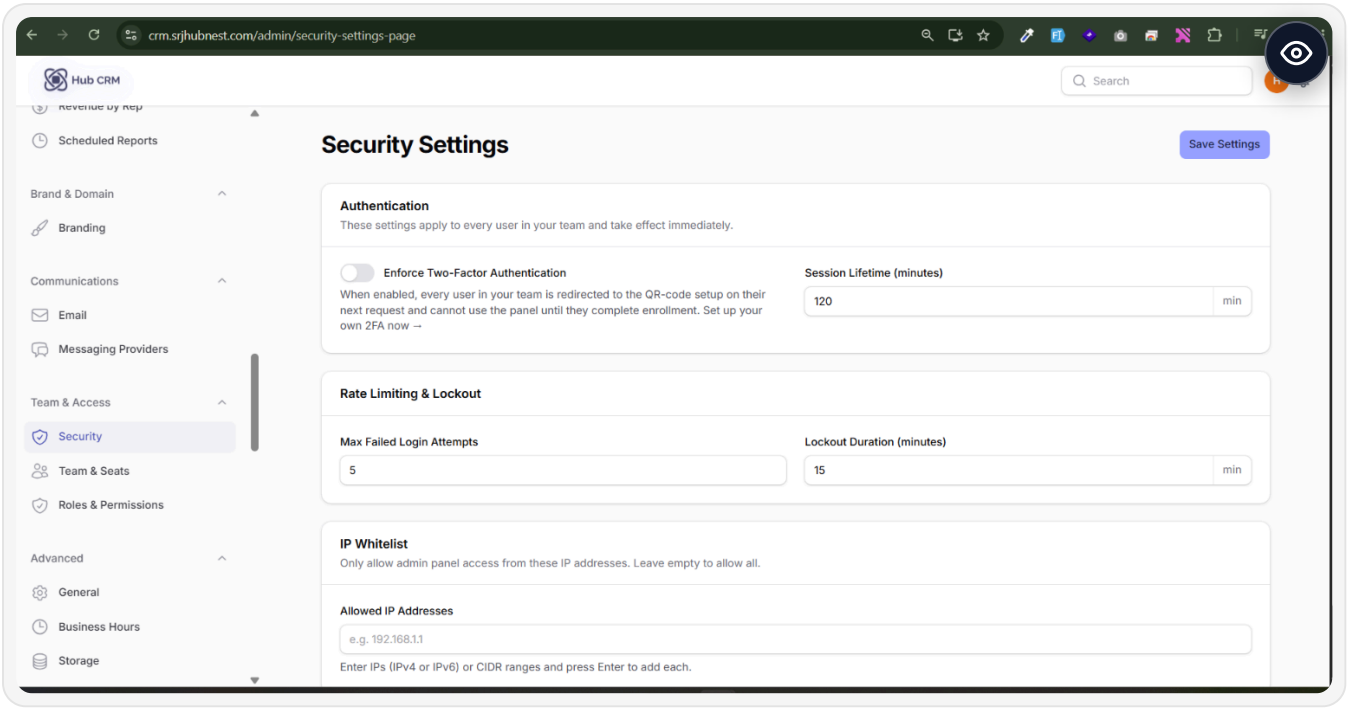

Roles & Permissions

Team & Access → **Roles & Permissions**: for each role tick what it may view, create, edit and delete (leads, companies, quotes, invoices, automations, reports, settings...). Click **Save**.

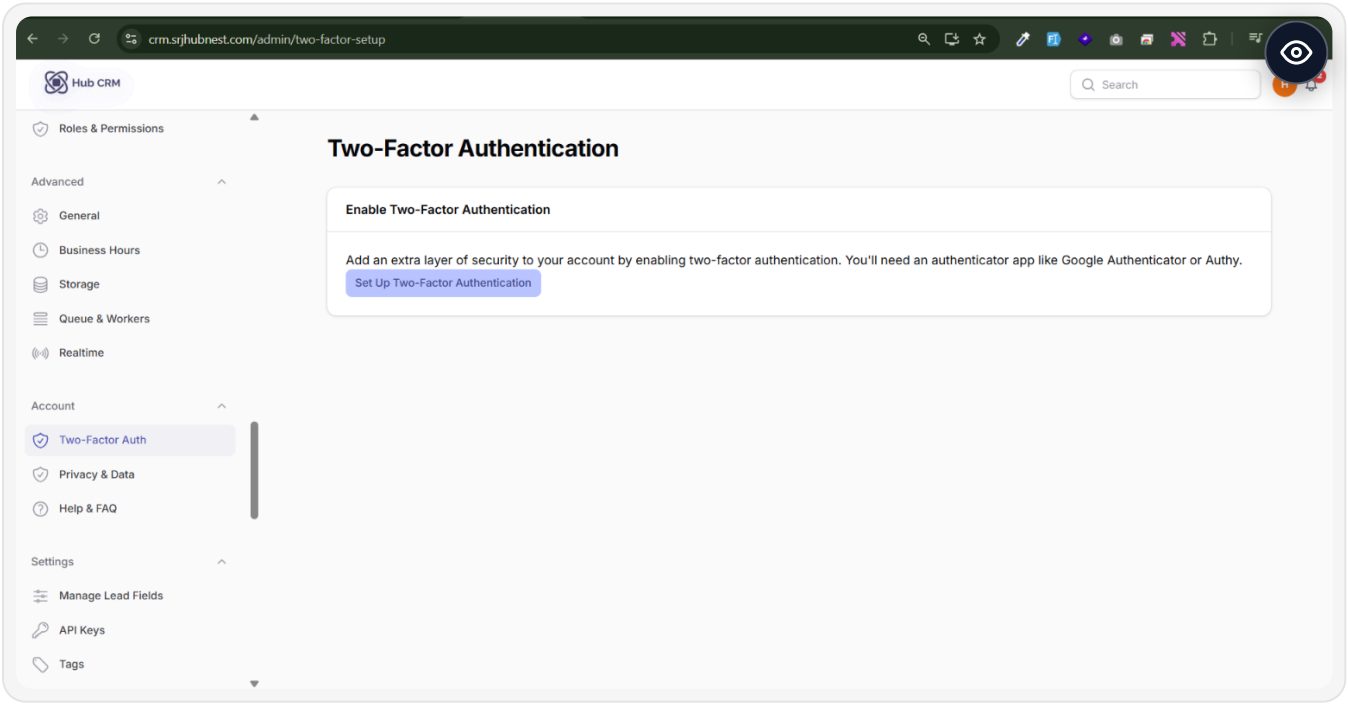

Security settings

Team & Access → **Security**: password and login rules, whether two-factor authentication is required for the workspace, and login-attempt protection.

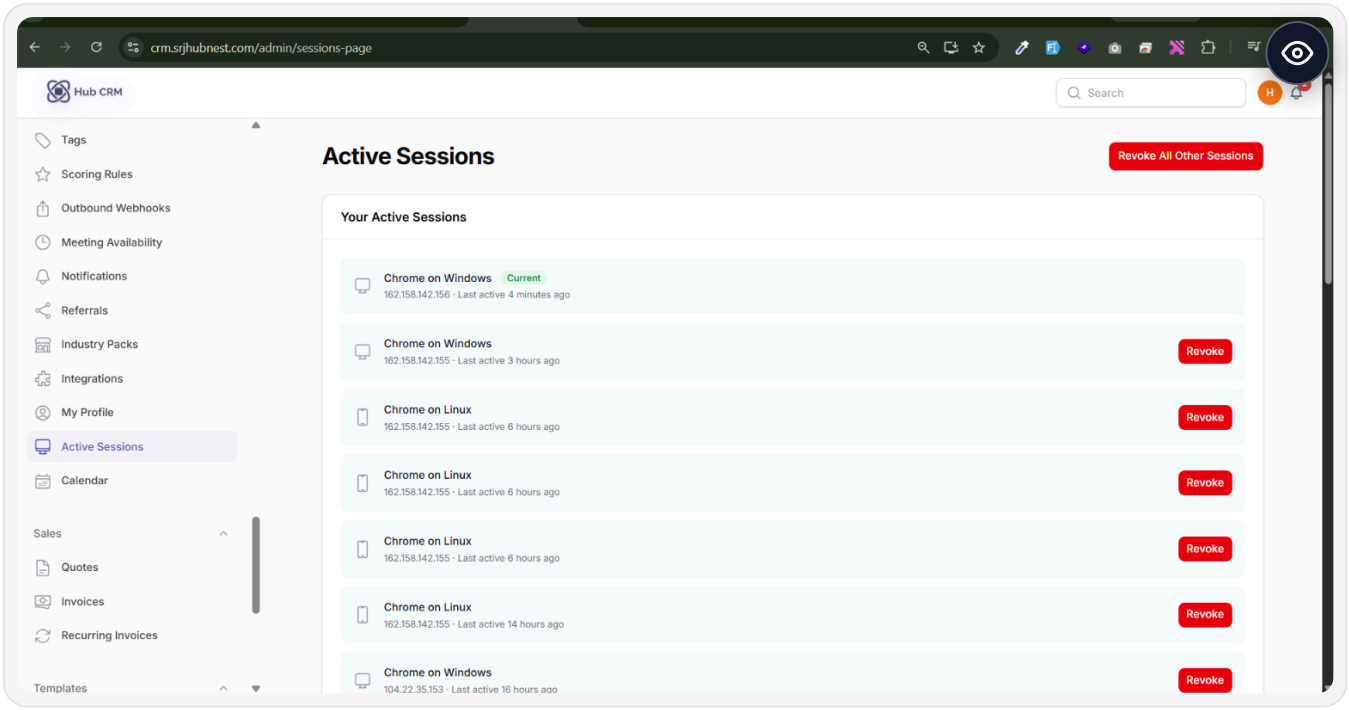

Two-Factor Authentication (your account)

Account → **Two-Factor Auth**: scan the QR code with an authenticator app, enter the 6-digit code and save your recovery codes somewhere safe.

Active Sessions

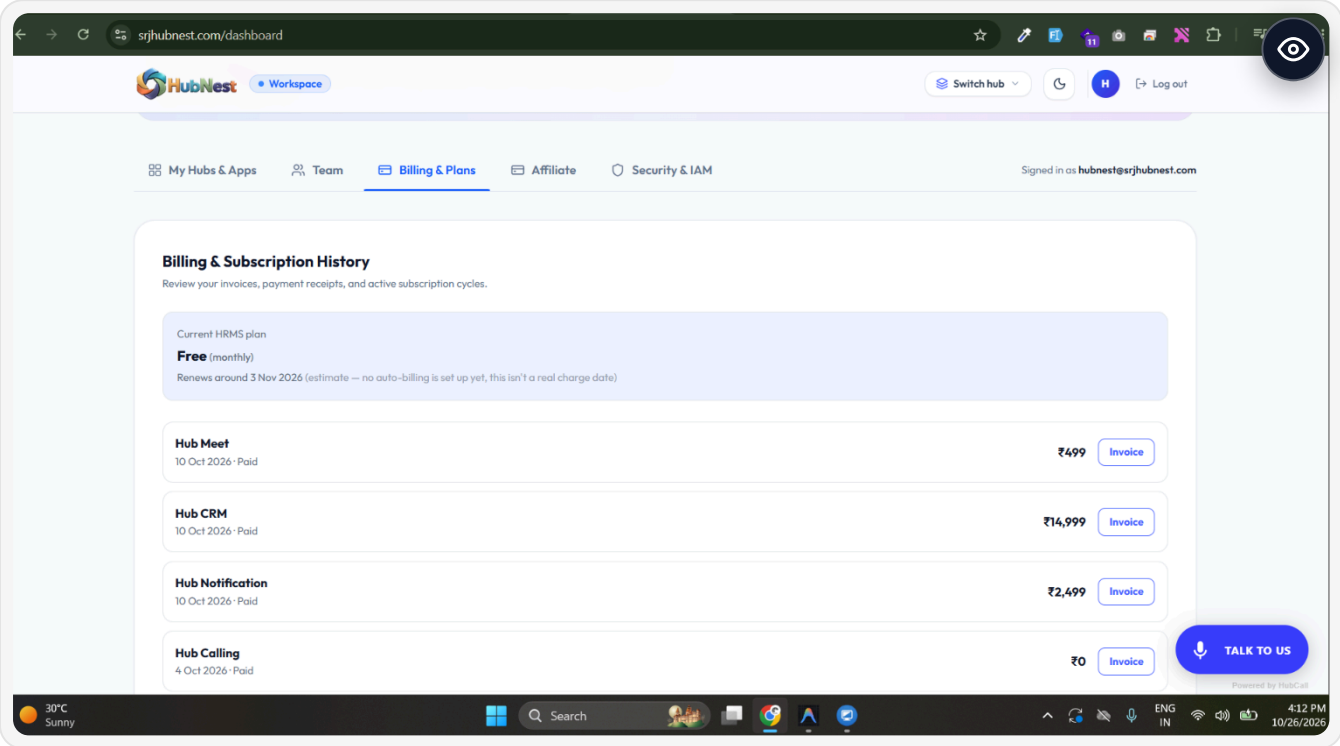

Settings → **Active Sessions** lists devices signed in to your account. **Sign out everywhere** ends every other session - use it if a device is lost.

Account, Billing, Privacy and Referrals

Billing & Subscription

Account → **Billing**: your current plan, seats, renewal date, payment method and past invoices. Plan changes and renewals are handled through HubNest billing. If a subscription lapses the workspace shows a **Subscription Required** page until it is renewed - your data is kept.

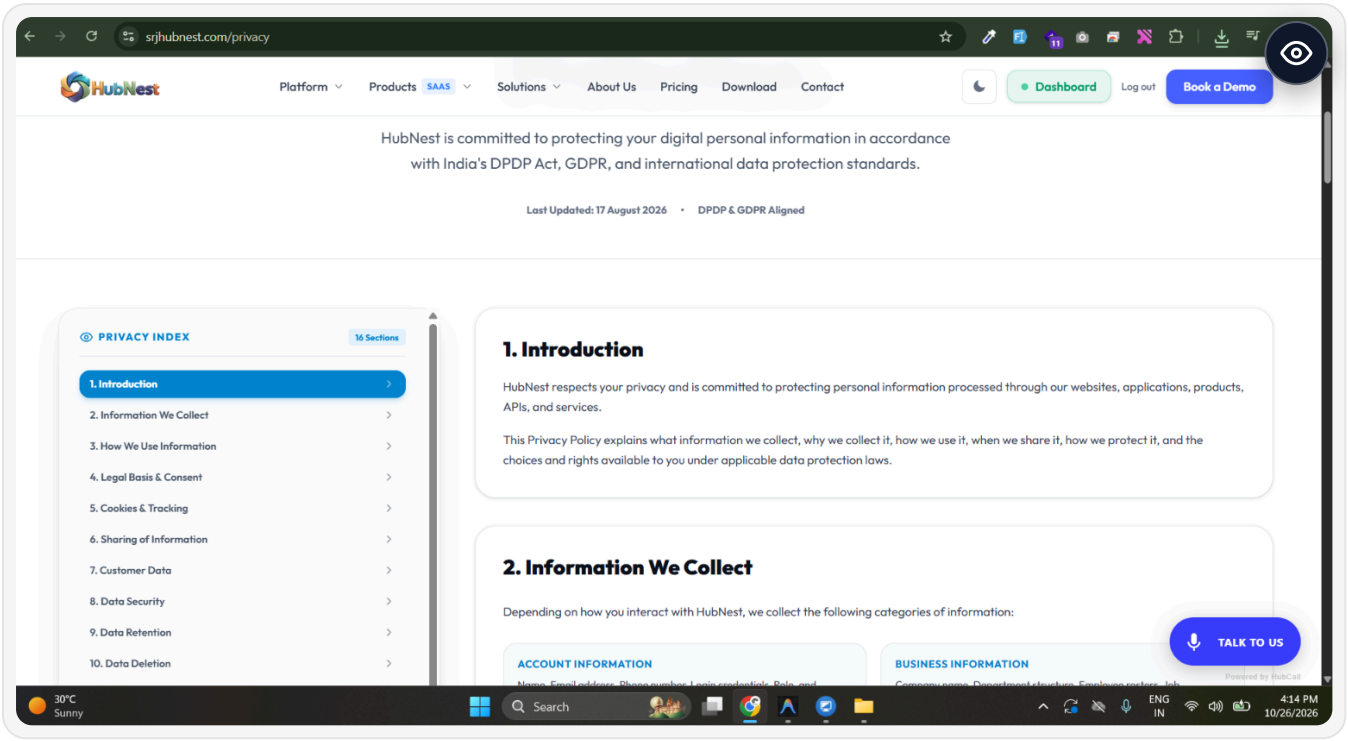

Cancel subscription: the cancel screen asks for a reason and confirms the end date. Your workspace stays usable until the paid period ends.

> **The cancel screen**
>
> A confirmation dialog opens with a dropdown asking **why you are cancelling** (too expensive, missing a feature, switching tools, other - with a free-text box for "other"), a line stating the exact date access ends (*"Your workspace stays active until 30 Nov 2026"*), and two buttons: a quiet **Keep my subscription** and a red **Cancel subscription**. After confirming, a banner stays on every page reminding you of the end date until you either renew or the period runs out.

Privacy & Data

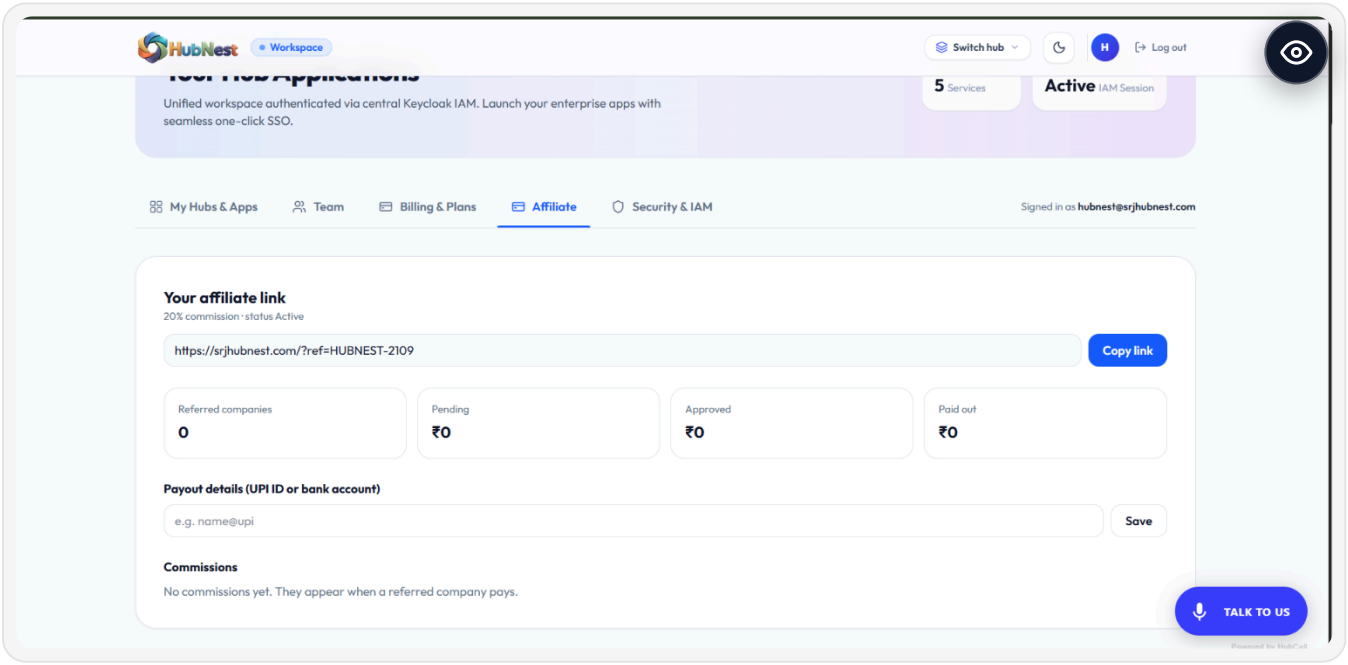

Account → **Privacy & Data** lets the workspace admin:

- **Export** all workspace data.
- **Request erasure** of the workspace or of a person's data (GDPR-style). Erasure runs after a waiting period; a banner shows the scheduled date.

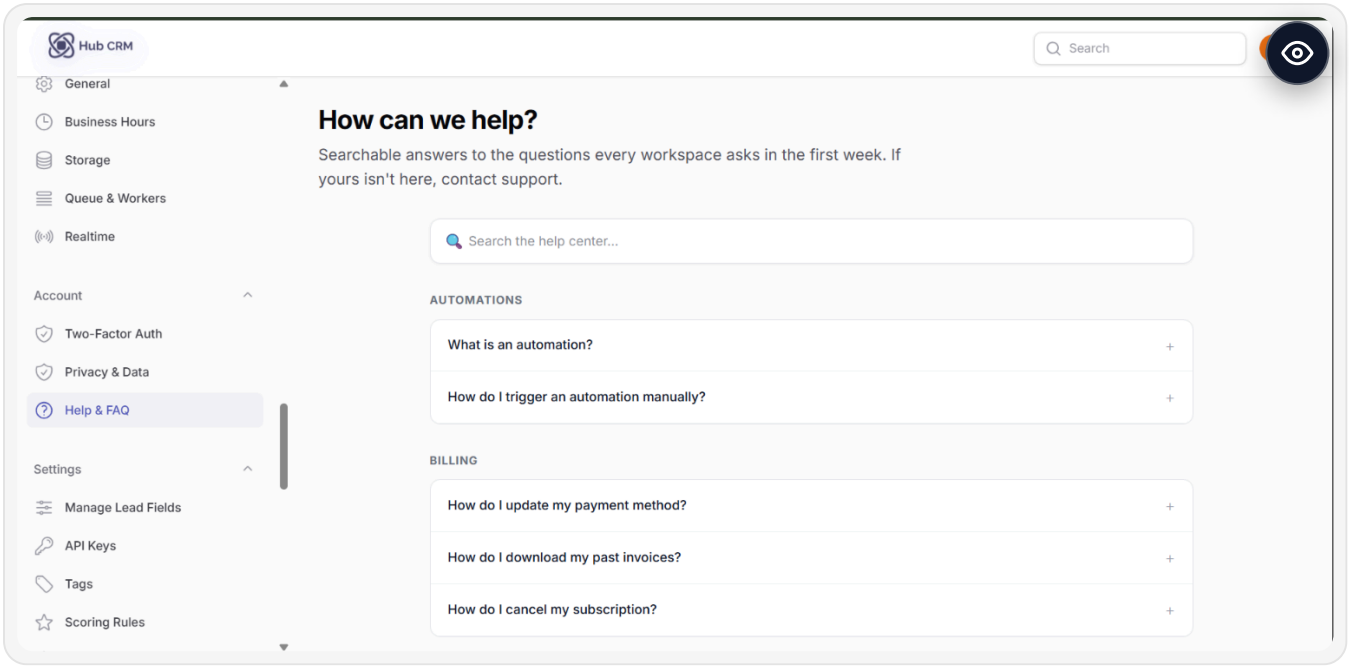

Referrals

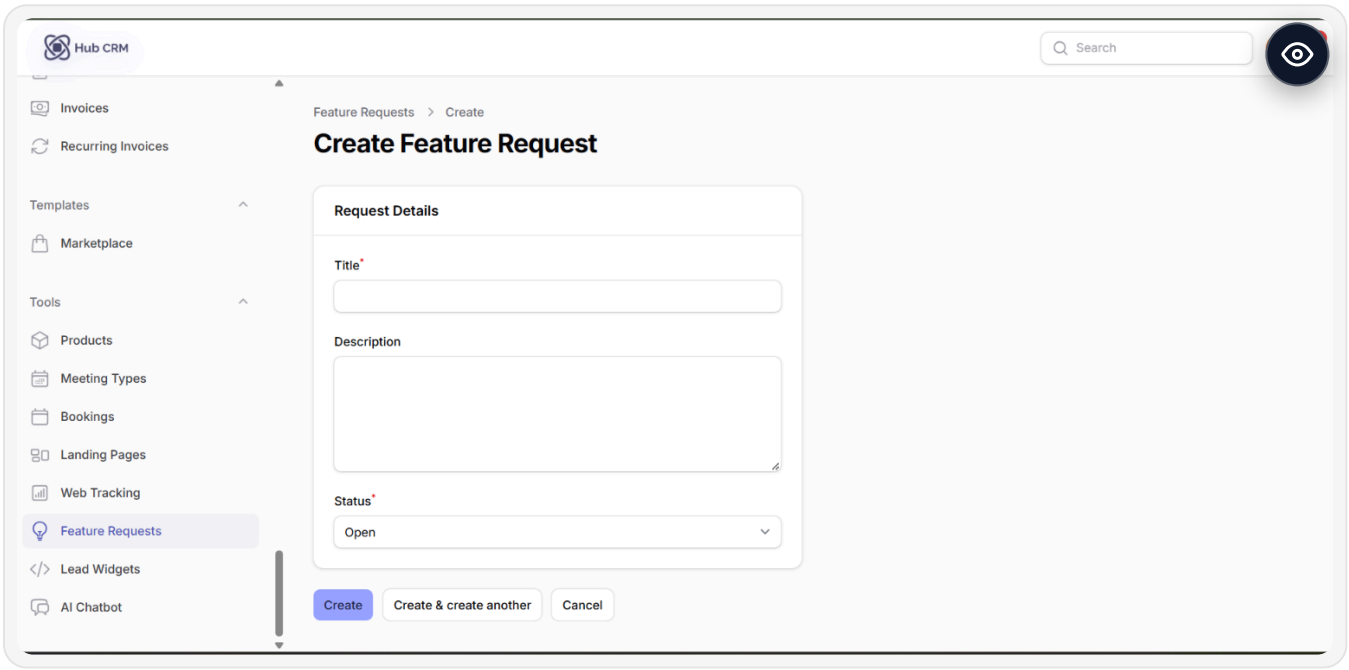

Settings → **Referrals** gives you a personal link. When someone signs up through it you earn the reward shown on the page.

Help Center and Feature Requests

- **Account** → **Help Center**: short articles for each feature.
- **Tools** → **Feature Requests**: suggest an idea; **Upvote** others'.
