Financial Operations Command Center & Revenue Overview

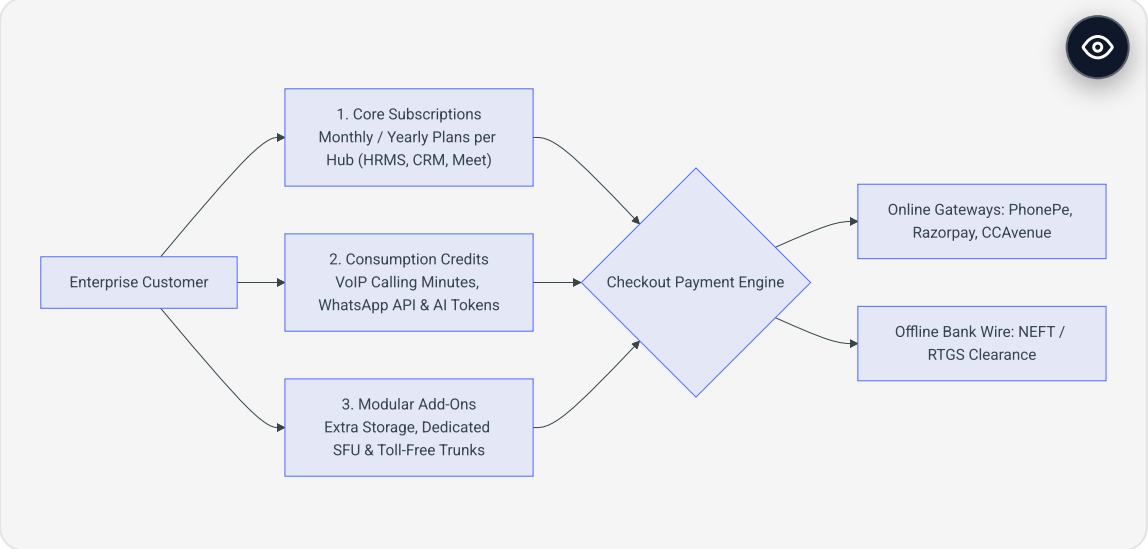

Welcome to the **Billing, Revenue & Financial Controller Manual**. In an enterprise multi-product SaaS ecosystem, managing recurring revenue, diverse payment gateways, manual wire transfers, promotional discounts, and consumption credit wallets requires meticulous financial governance.

As a Billing & Finance Controller, you oversee the commercial engine of the HubNest platform from the **Billing** section of the Master Admin Console (`@hubnest/platform-admin`). You package subscription plans, manage digital payment gateway credentials, verify manual bank deposits, and track checkout conversions.

---

1. Commercial Architecture & Revenue Streams

The HubNest monetization model comprises three complementary revenue streams:

1. **Core Subscription Tiers:** Tiered recurring contracts (`STARTER` , `PRO` , `ENTERPRISE`) packaged individually or bundled across business hubs.
2. **Prepaid Consumption Wallets:** Usage balances for metered telephony minutes, WhatsApp outbound messaging tariffs, and generative AI LLM token usage.
3. **Modular Add-Ons & Hardware:** Fixed recurring fees for specialized features such as dedicated SFU media clusters, 1800 National Toll-Free trunk leases, and expanded

document storage vaults.

---

2. Currency Precision & Paise Integer Model

To prevent floating-point rounding discrepancies during invoice generation and tax calculations, HubNest stores all financial values internally as **integer paise** (where 100 paise = ₹1.00 INR):

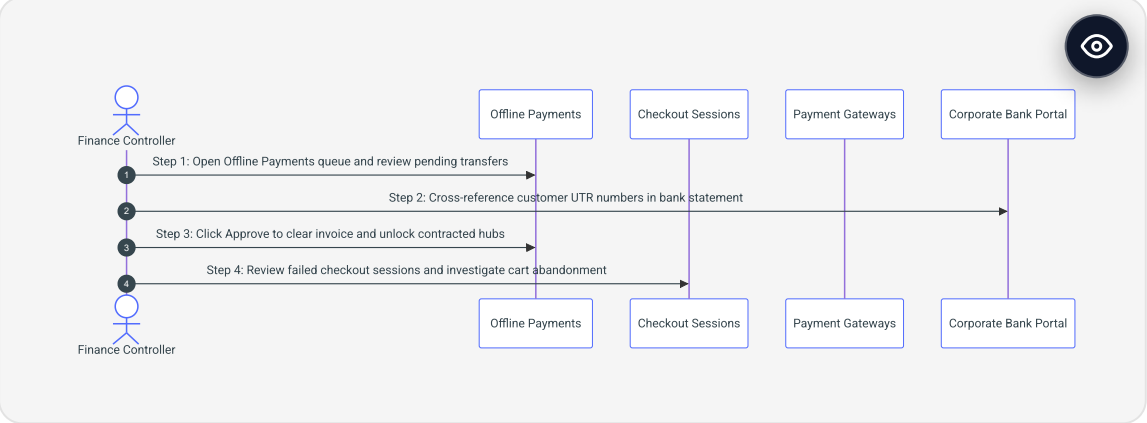

Database Value (`amountPaise`)	Display Value in Admin UI	Customer Billing Meaning
`99900`	**₹999.00**	Starter HubHRMS Monthly Subscription.
`499900`	**₹4,999.00**	Pro Multi-Hub Bundle Monthly License.
`5000000`	**₹50,000.00**	Enterprise Annual Softphone SIP Trunk Contract.

> [!NOTE] **Automatic Currency Formatting:** The Master Admin Console automatically parses paise values into Indian Rupee formatting with standard comma placement (e.g., `₹1,25,000.00`) for effortless financial auditing.

---

3. Daily Financial Operations Checklist

Follow this 4-step checklist at the beginning of every business day:

Step 1: Reconcile Offline Bank Transfers

- Navigate to **Billing** > **Offline Payments** (`/offline-payments`).
- Review transactions submitted via NEFT, RTGS, or IMPS.
- Match the customer's billing legal name, GSTIN, and reported transaction amount against your corporate bank statement.
- Click **Approve** to instantly activate the customer's contracted hubs.

Step 2: Monitor Online Gateway Settlement Health

- Navigate to **Billing** > **Payments** (`/payment-gateways`).
- Check that the active online gateway (e.g., **Razorpay** or **PhonePe**) has passed its automated daily connectivity handshake test.

Step 3: Review Live Checkout Sessions

- Click **Billing** > **Invoices** (`/checkout-sessions`).
- Filter sessions by status:
- 🟢 `active` : Successful checkout transactions.
- 🟡 `pending` : Customer initiated checkout but has not yet completed payment.
- 🔴 `failed` : Card declined, UPI timeout, or netbanking session rejected by bank.

Step 4: Audit Coupon Redemptions

- Click **Billing** > **Coupons** (`/coupons`).
- Review coupon redemption velocity to ensure promotional campaigns remain within budgeted enterprise margin targets.

---

4. Billing Navigation Quick Reference

Administrative Target	Menu Path	Primary Financial Function
Hub Plans & Tiers	Billing > `Plans`	Configure monthly/yearly pricing, employee limits, and feature gates.
Active Subscriptions	Billing > `Subscriptions`	Track active customer licenses, unlocked hubs, and monthly contract totals.

Administrative Target	Menu Path	Primary Financial Function
Checkout Sessions	Billing > `Invoices`	Inspect public checkout logs, customer emails, and session timestamps.
Payment Gateways	Billing > `Payments`	Manage credentials and test connectivity for PhonePe, Razorpay, and CCAvenue.
Promotional Coupons	Billing > `Coupons`	Create flat or percentage discount promo codes with usage caps.
Offline Bank Payments	Billing > `Offline Payments`	Approve or reject manual wire transfers and clear tax invoices.
Prepaid Credits	Billing > `Credits`	Inspect usage wallets and allocate promotional telephony credits.

5. Next Steps in this Guide

- To design subscription tiers and feature checklists, read Multi-Hub Plan Packaging & Feature Gating.
- To configure merchant credentials, explore Payment Gateway Setup (PhonePe, Razorpay, CCAvenue).
- To clear wire transfers, review Manual Bank Transfer Approval & Invoice Clearance.
- To launch discount codes, visit Promotional Coupons & Redemption Controls.
- To manage consumption balances, explore Pre-Paid Usage Credits & Token Top-Ups.
